No. 4932 of 1899.

FROM

A. MARTINDALE, ESQ.,
AGENT TO THE GOVERNOR-GENERAL, RAJPUTANA,

TO

THE SECRETARY TO THE GOVERNMENT OF INDIA,
FOREIGN DEPARTMENT.

Dated Abu, the 23rd October 1899.

SIR,

IN continuation of the correspondence ending with letter No. 468-I.A., dated the 20th February 1899, from the Government of India in the Foreign Department, I have the honour to forward a copy of the letter noted in the margin, from Lieutenant-Colonel A. Adams, M.B., I.M.S., Administrative Medical Officer in Rajputana, submitting his Report for 1898 on Dispensaries, Jails, and Sanitation in Rajputana and Ajmer-Merwara, and on Vaccination for the official year 1898-99, together with my Review of his Report.

No. 2013, dated the 28th June 1899.

I have the honour to be,

SIR,

Your most obedient Servant,

A. MARTINDALE,

Agent to the Governor-General, Rajputana.

No. 2013, dated Abu, the 28th June 1899.

From—LIEUTENANT-COLONEL A. ADAMS, M.D., I.M.S., Administrative Medical Officer in Rajputana,

To—The First Assistant to the Agent to the Governor-General for Rajputana.

I have the honour to submit the Annual Report on Sanitation, Dispensaries, and Jails of Rajputana for 1898, and on Vaccination for the official year 1898-99.

Mortuary Statements I to XI.
Vaccination Statements I to V.
Comparative Statement of Small-pox and Vaccination.
Dispensary Statements I, II, III, IIIA, Supplement IIIA, IV, V, Parts I and II.
Jail Statements III, IX, XII, XIII, and XIV.

2. The statements named in the margin are appended.

Review of the Annual Report on the Sanitation, Dispensaries, and Jails of Rajputana for the year 1898, and on Vaccination for the official year 1898-99.

Rainfall.

	Ajmer. Inches.	Beawar. Inches.
*1897	23·29	22·26
1898	12·97	12·78
Six years' average . .	25·80	22·75

The rainfall recorded * at Ajmer and Beawar during the year under review (1898) was far less than that of 1897, which again was somewhat less than the average fall of the preceding six years in both districts. The crops were in consequence comparatively poor, and a certain amount of distress was felt in both districts.

In most parts of Rajputana, moreover, outside the British districts of Ajmer and Merwara, the rainfall was deficient and the crops suffered, but the pressure was nowhere severe. In the Western States of Rajputana and in Bikaner the rainfall was very scanty, and scarcity of fodder and grass prevailed. Owing, however, to facilities for import afforded by railway extensions and good harvests in other provinces, the prices of food-grains in Rajputana and Ajmer-Merwara varied little from normal. The monsoon of the current year (1899) has so far proved an absolute failure throughout the greater part of Rajputana, and famine with acute distress is anticipated.

Vital Statistics.

The year 1898 was comparatively a healthy year. The recorded birth-rate in Ajmer-Merwara fell from 33·69 per mille in 1897 to 29·73 in 1898, and the death-rate from 24·68 to 22·13. The death-rate in 1896 was 28·25 per mille. The birth-rate exceeded the death-rate by 7·60 per mille, the excess in the previous year being 9·01. The highest mortality recorded was amongst children under five years of age, amounting to 47 per cent. of the total number of deaths against 49 per cent. in 1897 and 55 per cent. in 1896. The decrease in death-rate is attributed to some extent to more efficient vaccination. Though the largest number of deaths, *viz.*, 8,689, or 72·37 per cent. of the total, resulted from fever, it was less fatal than in the previous year when the percentage was 81·20. The deaths from small-pox, which was prevalent in epidemic form during a part of the year, amounted to 409 as compared with 158 in 1897. There was also an increase in the number of deaths from dysentery and diarrhœa, the returns for 1898 and 1899 being respectively ·81 and 1·01 per cent. of the total.

The registration of vital statistics in Native States is still defective. Registration was attempted in the Bundi State for the first time during the past year. The total number of States which enforce registration is now 18 against 17 heretofore. Indeed the only State which makes no attempt at registration is Dungarpur. The returns furnished are admittedly unreliable. An improvement has, however, been shown by some States upon their results in the previous year, and endeavours are constantly though cautiously continued to improve the system of collecting statistics. The average birth-rate registered in all the States which furnish returns was 13·64 per mille of population, and the death-rate 12·34. But the variations between the different States leave little room for doubt that the registration is far from correct.

Cholera.

It is satisfactory to note that the province was almost free from cholera. Only one suspicious death from cholera was recorded in Ajmer-Merwara, and

20 deaths in the Native States of Rajputana, *viz.*, 14 in Bundi and six in Bharatpur. All cases apparently proved fatal as the number of deaths shown during the year was 21 against 1,514 in 1897.

Sanitation.

The sanitary and conservancy arrangements in Ajmer were on the whole satisfactory, but those in the town of Beawar need improvement. The attention of the Municipal authorities has again been directed to this most important point.

The water-supply of Ajmer is mainly dependent on the Foy Sagar, which is at present unusually low. The reports of the Chemical Analyst show that the quality of the water in this tank is not entirely satisfactory. Rules for the improvement of village sanitation have been introduced in some villages of both the Ajmer and Merwara Districts.

Steady progress in regard to sanitation is observable in some of the Native States, especially in large cities, and the water-supply has in several instances been much improved. The conservancy steam tramway in Jodhpur has largely ameliorated the sanitary condition of that city and its suburbs.

Schemes for the supply of water to the cities of Udaipur, Bharatpur and Kotah are under consideration by the respective Darbars. Village sanitation is receiving attention in some of the more advanced States, especially in Marwar and Alwar.

Vaccination.

The results shown under this head continue satisfactory. In the Ajmer Division primary vaccinations rose from 16,480 in 1897-98 to 17,816 in 1898-99, of which 98·46 per cent. were successful against 98·74 in the previous year. The average number of persons vaccinated by each vaccinator rose from 1,273 to 1,380, while the cost of each successful operation fell from 26 to 24 pies. The total expenditure, however, amounted to R2,184-13-9 against R2,176-3-11 in 1897-98. This small increase was due to the grant of increased allowances to vaccinators. During the year under review 32·50 per mille of the population were vaccinated as against 30·09 in the previous year.

In Native States there was a large increase in the number of primary vaccinations, namely, from 296,933 in 1897-98 to 334,374 in 1898-99. Of the latter 99·27 per cent. were successful against 98·55 in the previous year. With regard to the high percentage of successful operations the Administrative Medical Officer reports that he has no reason to suspect irregularities. He writes:—"All Medical Officers impress on their subordinates the imperative necessity of applying sufficient lymph to prevent failure in the first operation, and this is undoubtedly one of the most important points connected with vaccination, when it is being first started. People generally, and mothers in particular, have the strongest objections to a second operation, and if unsuccessful cases be frequent, the work becomes so unpopular that it can hardly be carried on."

Vaccination returns have for the first time been received from Bundi. The average number of persons vaccinated in the whole province by each vaccinator rose from 1,271 in 1897-98 to 1,387 in 1898-99, while the average cost of each successful operation fell from 21 to 18 pies. The total expenditure amounted to R31,715-1-9 against R32,338-12-6 in 1897-98. The largest number of vaccinations was performed in Marwar and Jaipur.

Dispensaries.

At the close of the year under review there were 156 medical institutions open in Rajputana as against 154 at the end of the previous year. Besides these there were five Mission and six Railway hospitals. Three new dispensaries were opened during the year, *viz.*, one at Samode in the Jaipur State, one at Debari Railway Station in Mewar, and one travelling dispensary in Alwar. The new hospital at Churu in Bikaner and the main block of the General Hospital at Bharatpur were completed during the year.

In Ajmer-Merwara 712 in-door and 53,756 out-door patients were treated against 898 and 61,243 respectively during the previous year. The fall in the number of patients both in-door and out-door is attributed to the relative healthiness of the year. In the Political and Salt Department dispensaries the attendance of in and out door patients was 604 and 23,111 against 641 and 22,857 in the preceding year. In the hospitals and dispensaries of Native States 14,374 in-door and 922,951 out-door patients were treated against 15,025 and 948,088 respectively in the previous year. The decrease is small, and is attributed to the better condition of the people and the comparative healthiness of the year.

In the five Mission Hospitals, of which two are at Ajmer, one at Nasirabad, one at Udaipur, and one at Jodhpur, the number of in and out door patients treated was 713 and 49,768. Four thousand six hundred and one surgical operations were performed against 4,939 in 1897.

The number of patients treated at the six Railway hospitals was 41,362 against 24,558 in the previous year, the large increase being due to the fact that the dispensary at Bandikui Station was not included in the previous year's return.

Malarial fever and spleen diseases, as usual, accounted for the greater number of admissions in all the dispensaries and hospitals, but the greatest mortality was caused by diseases of the lungs and respiratory organs. The Ajmer Division, where diarrhœa and dysentery proved most fatal, accounting for ·26 per cent. of the total number of deaths, forms an exception. Diarrhœa and dysentery were less fatal in Native States than in the previous year, and the percentage of deaths caused by them fell from 30 to 18 of the total numbers returned. Six hundred and thirty-eight cases of leprosy were treated during the year as against 650 in the previous year.

Surgical operations.

The total number of surgical operations performed was 64,489 as against 62,004 in 1897. There were 3,019 operations in the Ajmer Division, the total for the previous year being 3,463. In Native States the number recorded rose from 58,541 in 1897 to 61,470 in 1898 including 461 performed in the Agency and Salt dispensaries. The largest number of operations were performed by Lieutenant-Colonel A. Adams, I.M.S., Residency Surgeon (Administrative Medical Officer for Rajputana), Western Rajputana States, and Major P. D. Pank, I.M.S., Residency Surgeon, Jaipur. The number of operations performed by each during the twelve months was 839 and 491 respectively. Surgery in Native States appears to me to be making steady progress.

Quinine was sold at 135 Post Offices as against 133 in the previous year. Three hundred and twenty-five packets containing 33,150 doses were sold, the corresponding figures for 1897 being 460 packets and 46,920 doses. The

decrease in the quantity sold is attributed to greater freedom from malarial fever, and to the general healthiness of the year. The largest sales were effected in towns near the railway stations.

It has been decided to continue the experiment for a further period.

Expenditure.

The expenditure on hospitals and dispensaries in Ajmer-Merwara rose from R10,757 in 1897 to R11,040 in 1898 and in Agency hospitals and Salt dispensaries from R10,000 to R10,307. The expenditure in Native States fell from R3,12,828 to R2,84,128. The decrease was due chiefly to the reduced outlay on new buildings and repairs. Nearly one-half of the total expenditure was borne as before by the States of Jaipur, Jodhpur, and Bikaner.

Bubonic Plague.

No case of bubonic plague was imported into Rajputana during the first half of the year under review, but during the latter months fifteen cases of plague, real or suspected, were discovered at stations on the railway within Rajputana limits, of which fourteen proved fatal. The fact that there were no indigenous cases may be justly attributed in part to the comparatively stringent precautionary measures which were continued during the year against the importation of the disease.

Jails.

The daily average number of prisoners in the Ajmer Jail fell from 292·52 in 1897 to 287·74 in 1898. The admissions to hospitals fell from 79 to 75, but the death-rate rose from 6·84 to 13·90 per mille. The increase of mortality is attributed to the fact that a comparatively large number of the convicts were old and in indifferent health on admission.

Returns were received from twenty jails in Native States. The daily average number of prisoners in these jails fell from 4,919·73 in 1897 to 4,679·58 in 1898, and the admissions to hospital from 5,888 to 3,636. The decrease is attributed to the healthiness of the year and to improvement in the management of the State jails. The daily average sick fell from 124·95 to 112·32, and the death-rate from 23·58 to 19·23 per mille. The rate of mortality fell in all the jails of Native States, except in those of Jaipur, Kishangarh, and Tonk. It ranged from 4·09 in Bikaner to 61·54 in Dholpur. About this jail the Administrative Medical Officer reports that it "is badly situated and badly constructed It is, however, hoped that a new jail on modern hygienic principles will shortly be built on a better site." These remarks were brought to the notice of the Dholpur Darbar, who replied that in the present embarrassed condition of the State finances, it would be difficult to build a new jail, but that such improvements as could be made in the existing building would be carried out at an early date. The necessity for building a new jail on modern hygienic principles and on a new site, as soon as the condition of the State Finances permit, will be kept before the Darbar. No deaths were reported from the jails at Shahpura and Dungarpur. The majority of the jails in Rajputana are now in good condition and the management of some of them is admirable. A new jail has been built and opened at Kishangarh, and steps are being taken to enlarge the jail at Udaipur. Overcrowding was noticed in the case of the jails at Dholpur and Karauli. The question of building a new jail on a modern pattern and on a more healthy site is under consideration at Partabgarh. The state of the existing jail at Banswara, like that at Dholpur, demands and has received close attention.

Female hospitals and medical education of women.

The Mission Female Hospital at Ajmer has been since January 1899 under the superintendence of Miss Garvie, and much useful work has been done among women both in the hospital and at their homes. Female Hospital Assistant Champa Bai remained throughout the year in charge of the Female Dispensary at Beawar in which 7,178 out-patients were treated.

The Jaswant Hospital at Jodhpur was superintended throughout the year by Miss Adams, M.D., who showed excellent results both in the hospital and in visiting *parda nashin* ladies at their homes. Her energy and tact are as conspicuous as her skill: she has deservedly earned a popularity which is not limited to the State of Jodhpur in which she chiefly works. In all 8,308 patients were treated at this hospital and 774 operations performed. Miss Dissent, M.D., formerly in charge of the Lady Dufferin Hospital at Alwar, was relieved in February 1899 by Miss Lander, M.D. In this hospital 11,267 patients were treated both in and out-door, of whom 1,886 were *parda nashin*, and 2,045 operations were performed. The accommodation for patients in this hospital was much increased by the addition of two new wards, opened during the year under review.

Miss Graham continued in charge of the Walter Zenana Hospital at Udaipur and Miss D'Souza in charge of the Walter Hospital at Tonk. The female dispensary at Bharatpur remained under the charge of Bibi Rup Kuar, and the Victoria Hospital at Kotah under that of Miss Karimullah. The Female Hospital Assistant Bibi Ashrafi continued to supervise the female wing of the Bhagwan Dass Hospital at Bikaner. The female dispensary at Karaoli, which had been closed for want of a qualified practitioner, was opened in February 1899 and placed in charge of Mrs. Bose, a qualified Hospital Assistant from Calcutta.

Inspections.

Lieutenant-Colonel A. Adams, I.M.S., held charge of the office of the Administrative Medical Officer in Rajputana, in addition to his duties of Residency Surgeon, Western Rajputana States. He inspected most of the jails in the province during the year and all the important medical institutions at the head-quarters of the several Residencies and Political Agencies. His supervision of the Department as well as his personal work were distinguished as always by energy and thoroughness in all branches.

A. MARTINDALE,

Agent to the Governor-General, Rajputana.

REPORT

ON

THE ADMINISTRATION OF RAJPUTANA

(SANITARY, VACCINATION, DISPENSARY, AND JAIL)

FOR

1898.

SECTION I.—SANITATION AND VACCINATION.

METEOROLOGY AND ITS RELATION TO FOOD-SUPPLY.

TABLE 1.—*Rainfall of Ajmer and Beawar.*

YEAR.	Place.	INCHES.			
		January to May.	June to September.	October to December.	TOTAL.
1898	Ajmer	0·62	11·93	0·42	12·97
Average of previous six years	Ajmer	1·31	23·31	1·18	25·80
1898	Beawar	0·88	11·20	0·70	12·78
Average of previous six years	Beawar	1·34	20·14	1·27	22·75

The above table shows the rainfall of Ajmer and Beawar for 1898 and the average for six years.

2. During the year under report 12·97 inches of rain were registered in Ajmer, against 23·29 in the previous year, a rainfall of 12·83 inches less than the average of the previous six years. The rainfall at Beawar was also below the average of the previous six years, *viz.*, 12·78, against an average of 22·75 inches, and the total registered was 9·48 inches less than the rainfall of 1897.

3. The Foy Sagar, which is the principal source of the Ajmer water-supply, has been unusually low this season. The water of this tank was sent to the Chemical Examiner three times during the year, and it has been regularly reported to be unfit for drinking purposes.

4. In most of the States of Rajputana the rainfall was below the average. In Jaisalmer only a little over 3 inches fell, and in Bikaner only a little over 8 inches were registered, against 17·30 inches in the previous year. In Udaipur 24·06 inches were registered, a little less than the average fall. In Jaipur 20·29 inches of rain were registered, 4·98 below the average. In Alwar State the rainfall varied from 13·94 inches in the Gobindgarh Tahsil to 24·27 in Rajgarh. At the Capital only 18·80 inches were registered, nearly 12 inches less than last year.

5. In some of the States there were no late rains, consequently the crops and grass withered and scarcity has since prevailed. Marwar, Bikaner, Jaisalmer, Sirohi, and parts of Jaipur and Udaipur suffered most.

6. The water-supply is unusually low in most of the States of Rajputana, and it is particularly scarce in Jaisalmer, Bikaner, Jaipur, and Marwar.

TABLE 2.

YEAR.	RAINFALL IN INCHES.		AVERAGE PRICE OF BARLEY AT AJMER AND BEAWAR PER RUPEE.				DEATH-RATE PER THOUSAND OF POPULATION.	
	Ajmer.	Beawar.	Ajmer.		Beawar.		Ajmer.	Beawar.
			Seers.	Chks.	Seers.	Chks.		
1894 . . .	26·99	23·70	27	3	31	11	28·59	39·59
1895 . . .	24·43	15·26	21	9	23	15	25·81	30·94
1896 . . .	26·46	24·51	14	9	15	5	28·53	27·24
1897 . . .	23·29	22·26	12	7	13	3	24·28	26·08
1898 . . .	12·97	12·78	18	3½	20	4	22·07	22·37

7. The above table shows that the price of barley was considerably below the average in both Ajmer and Beawar, and also that the death-rate was lower than the average of five years.

VITAL STATISTICS.

TABLE 3.—*Birth-rate of Population of the Ajmer Division.*

STATEMENT I.

YEAR.	POPULATION.			BIRTHS REGISTERED.			BIRTHS TO 1,000 LIVING.		
	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.
1896 . .	283,325	254,033	542,358	9,277	8,496	17,773	17·11	15·66	32·77
1897 . .	288,325	254,033	542,358	9,669	8,602	18,271	17·83	15·86	33·69
1898 . .	288,325	254,033	542,358	8,573	7,549	16,122	15·81	13·92	29·73

8. There were 16,122 births registered in Ajmer-Merwara in 1898, against 18,271 in 1897 and 17,773 in 1896. Of the total births registered 8,573 were males and 7,549 females, and the birth-rate per mille was 29·73, against 33·69 in the previous year and 32·77 in 1896. The percentage of male to female births was 113·56, against 112·40 in 1897 and 109·19 in 1896, so it is obvious all the female births are not being registered.

9. The birth-rate exceeded the death-rate in 18 out of 23 circles, against 19 in the previous year, and the total birth-rate exceeded the total death-rate by only 7·59 per mille, against 9·01 in 1897. This is a slight improvement.

TABLE 4.—*Death-rate of Population of Ajmer-Merwara.*

STATEMENTS II TO X.

DEATH-RATE PER THOUSAND OF POPULATION PER ANNUM.													PERCENTAGE AMONG TOTAL DEATHS.									
YEAR.	Total.	SEX.		SEASON.				CAUSES.						AGE.								
		Male.	Female.	Quarters of the year.				Cholera.	Small-pox.	Fevers.	Dysentery and diarrhœa.	Injuries.	All others.	Under 1 year.	1 and under 5.	5 and under 10.	10 and under 15.	15 and under 20.	20 and under 30.	30 and under 40.	40 and under 50.	50 and under 60.	60 and upwards.
				First.	Second.	Third.	Fourth.																
1896 . .	28·25	28·42	28·06	45·96	26·84	20·56	19·64	·02	7·05	17·34	·70	·52	2·63	30	25	5	2	3	6	7	7	8	7
1897 . .	34·69	35·04	25·41	19·12	29·34	25·28	34·44	·04	·29	20·07	·81	·47	3·00	31	18	3	3	3	7	7	8	10	10
1898 . .	22·13	22·34	21·91	26·80	21·24	19·32	21·16	·01	·75	16·02	1·01	·51	3·83	28	19	3	2	3	7	7	9	10	12

10. This table shows the death-rate according to sexes, seasons, causes and age.

11. In this Division the total number of deaths in 1898 was 12,005 against 13,385 in 1897, a decrease of 1,380. This gives a death-rate of 22·13 per mille of population against 24·68 in the previous year. The highest mortality was recorded in the first and the lowest in the third quarter of the year.

12. There was only one death recorded from cholera in Ajmer-Merwara, but there was a considerable increase in the mortality from small-pox, which caused ·75 in 1898 against ·29 deaths per mille in 1897.

13. The mortality among children under five years of age was 2 per cent. lower than in the previous year, *viz.*, 47 against 49 per cent. of the total deaths recorded. The lower death-rate among children, during recent years, has been brought about to some extent by more efficient vaccination.

14. The deaths exceeded the births in 5 of the 23 circles against 4 in the previous year. This is unsatisfactory and indicates the necessity for improved supervision of vital statistics.

15. An Hospital Assistant superintends the registration of vital statistics at Ajmer, and it is now proposed to employ Assistant Health Officers in Beawar, Kekri, and Nasirabad.

TABLE 5.—*Deaths according to Diseases in the Ajmer Division.*

STATEMENT VI.

YEAR.	Cholera.	Small-pox.	Fevers.	Dysentery and diarrhœa.	Injuries.	All others.	TOTAL.
1896 . . .	12	3,821	9,403	379	280	1,426	15,321
1897 . . .	19	158	10,883	439	256	1,630	13,385
1898 . . .	1	409	8,689	549	278	2,079	12,005

16. This table shows the deaths according to diseases in the Ajmer Division.

17. There was a great diminution in the number of deaths from fevers, *viz.*, 8,689 against 10,883 in the previous year, and 9,403 in 1896; but the deaths from small-pox and dysentery and diarrhœa rose from 158 and 439 to 409 and 549, respectively, in 1898.

TABLE 6.—*Quarterly Deaths from Cholera and Small-pox in the Ajmer Division.*

STATEMENTS VII AND VIII.

	QUARTERS OF THE YEAR.				TOTAL.
	First.	Second.	Third.	Fourth.	
Small-pox	62	205	54	88	409
Cholera	1	...	...	...	1

18. This table shows the quarterly deaths from cholera and small-pox in the Ajmer Division.

19. Small-pox was epidemic in Ajmer-Merwara during the second and fourth quarters, and there were some deaths in the first and third quarters.

20. There was only one death from cholera in this division during the first quarter of the year, and this could hardly have been true cholera as the year was almost free from the disease throughout Rajputana.

TABLE 7.—*Births and Deaths in Native States.*

NAME.	Population according to census of 1891.	BIRTHS.				DEATHS.								
		Male.	Female.	Total.	Ratio per thousand of population.	Cholera.	Small-pox.	Fevers.	Dysentery and diarrhœa.	Snake-bite.	Injuries.	All others.	Total.	Ratio per thousand of population.
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

NOTE.—The information required for this table cannot be obtained in full from Jaisalmer. The total, therefore, of column 14 does not agree with the totals of the seven preceding columns.

21. The above table shows the registration of births and deaths in the Native States of Rajputana. Registration has been attempted in 18 Native States, one more than in the previous year, *viz.*, Bundi.

22. Although many of the returns are still obviously wanting in correctness, some of them show an improvement when compared with those of previous years. Endeavours are being made to improve the agencies for collecting these statistics, and it is hoped more accurate data will shortly be forthcoming. It will, however, take time to overcome the prejudices of the people of these States, many of whom are still averse to reporting female births, which, according to their ideas, reflect discredit on the family and household.

23. The birth-rate in cities ranged from 29·50 per mille of population in Jaisalmer City to 6·01 in Tonk, and in rural circles from 25·14 in Partabgarh to 2·52 in Jhalawar. The average for all the States was 13·64 per mille of population. The variations in the death-rates were equally unsatisfactory, *viz.*, from 44·66 per mille of population in Kotah City to 9·59 in Tonk, and in rural circles from 22·66 per mille in Partabgarh State to 2·59 in Jhalawar. The average for all the States was 12·34 per thousand of population.

24. The male births registered exceeded the female by 4,345, also the total births exceeded the deaths by 4,435. It is, therefore, obvious that the registration of vital statistics is still far from satisfactory.

25. There has been a considerable decrease in deaths from fevers, cholera, and small-pox, and also from dysentery and diarrhœa, in the States of Rajputana during the year 1898, *viz.*, 26,243, 20,590, and 3,398, against 26,791, 1,175, 817, and 4,144 in 1897. More deaths from snake-bite were registered, *viz.*, 142, against 99 in the previous year.

26. The Annual Forms, Nos. I and II, showing the births and deaths registered in the Ajmer-Merwara districts for 1898 have been prepared on the revised form, in accordance with the instructions laid down in letter No. 376—84, dated 24th February 1898, from the Government of India, Home Department, to all Local Governments and Administrations; and the principal sanitary defects in Municipal towns have been shown separately in Form No. XI.

TABLE 8.—*Number of Cholera cases reported in Ajmer-Merwara and in Native States during the year 1898.*

NAME.	APRIL.		MAY.		JULY.		TOTAL.		Percentage of deaths to cases.
	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	
Bharatpur (State) .	4	4	1	1	1	1	6	6	100

27. The above table shows the cases and deaths from cholera reported in Ajmer-Merwara and in Native States.

28. The year may be considered a non-cholera one, only 6 cases having occurred in Bharatpur, and they were, no doubt, due to some local insanitary condition or poison, and not true cholera.

29. As only 6 doubtful cases of cholera were reported in Rajputana during the year 1898, a cholera map is not appended.

SANITATION.

30. *Ajmer Division*—

Ajmer	Population	41,416, Suburbs,	27,427
	Birth-rate	27·62, „	27·62
	Death-rate	38·20, „	28·58

The water from the Foy Sagar is freely used for drinking purposes both in the city and suburbs, while the Ana Sagar lake supplies the gardens and dhobies' "ghâts."

31. The sanitary tramway has worked satisfactorily at Ajmer during the year, and the trenching ground is well looked after. The tramway and other conservancy carts need renewing, for which at least R40,000 are required. The Masuda tank outside the Usri gate has been entirely filled up. The huts, which were erected last year for a segregation camp near the railway station, are maintained in good order.

32. *Beawar*—

Population	20,978
Birth-rate	42·90
Death-rate	28·36

Well-water is used for drinking purposes; however, on account of the unusual drought during the year, there is likely to be great difficulty with the water-supply if the rains be delayed. The Government Analyst reports that the water of two of the city wells only at Beawar is fit for drinking purposes.

33. The Municipal Committee continues to supervise sanitation in Beawar. The system of drainage in force is imperfect, and foul and filthy water is not regularly removed from houses. There are not sufficient funds in the hands of the Municipality to construct masonry drains for the thorough draining of the town; householders should, therefore, be encouraged to collect and remove the waste water from their dwellings.

34. The rules for the improvement of village sanitation, referred to in previous reports, were introduced into the villages noted in the margin, shortly after the close of the year under report.

Ajmer District.
- Ramsar.
- Junian.

Merwara District.
- Beawar.
- Jawaja.
- Bhim.
- Barar.

35. *Mount Abu and Abu Road.*—The sanitary arrangements at Mount Abu are carefully supervised by the Magistrate, advised by the Local Municipal and Sanitary Committee, and by the Residency Surgeon, Western Rajputana States. Much attention is given to drinking-water, conservancy, drainage, and the prevention of over-crowding in the bazar, to which there is always a great tendency in the summer season.

36. The town of Kharari at Abu Road Station has been much improved by the new drainage system, paid for by the Sirohi Darbar, and by an improved conservancy system, which is well superintended by the Hospital Assistant in charge of the Charitable Dispensary there.

NATIVE STATES.

37. *Jodhpur*—

Population	61,849
Birth-rate	26·33
Death-rate	19·61

The sanitary steam tramway for Jodhpur City continues to be worked satisfactorily, and it has already done much to improve the condition of both the city and suburbs.

38. An Hospital Assistant is now at the head of the Sanitary Department in Marwar, and village sanitation is receiving some attention. The vaccinators have been taught the elements of sanitation to enable them to advise the villagers, among whom their ordinary duties lie, in the protection of the water-supply and other matters relating to public health; and this will undoubtedly have a beneficial effect in the districts.

39. The Darbar grant of R2,000 a month is continued to the Municipal Committee and R100 to the town of Pali for conservancy purposes. In several other Marwar towns the wealthy contribute to conservancy measures, and efforts are being made to introduce improved sanitation into all the larger towns. The Residency Surgeon continues to preside over the Municipal Committee of Jodhpur.

40. The water-supply of the city of Jodhpur has been greatly increased and improved, and, even after a very light rainfall, there is now no scarcity of water at the capital, from which many of the people had formerly to migrate at this season in years of diminished rainfall.

41. *Sirohi*—

Population	6,207
Birth-rate	10·31
Death-rate	14·34

The water-supply of the Sirohi City has been somewhat increased, and more attention is being paid to sanitation in that State than hitherto. Village sanitation is, however, still very backward.

42. *Jaisalmer*—

Population	10,509
Birth-rate	29·50
Death-rate	18·56

The water-supply of this desert city and also of some towns has, during recent years, been much increased and improved. But owing to the failure of the monsoon during the year under report scarcity of water is being much felt throughout the country. The drainage of Jaisalmer City has been improved, the main street has been metalled, and the conservancy system improved, but village sanitation is still very backward.

43. *Jaipur*—

Population	158,905
Birth-rate	27·68
Death-rate	34·10

The water-supply is sufficient and good. The latrine system has been improved during the year, and the conservancy system is working satisfactorily.

An Assistant Surgeon has charge of the Sanitary Department, and village sanitation is receiving some attention. A new incinerator has been put up for the burning of rubbish in the capital, and many other improvements in sanitation have been carried out there during the year.

44. *Bikaner*—

Population	56,252
Birth-rate	26·51
Death-rate	14·49

The water-supply of Bikaner City is from deep wells, which never fail even in the driest season, and which do not appear to be influenced by rainfall.

45. A new drainage system has been completed for the Bikaner palace, and it is working satisfactorily. The sanitation of the city is entirely under the supervision of the Civil Surgeon and the Municipal Committee, and it receives much attention from them.

46. *Bharatpur*—

Population	68,033
Birth-rate	16·55
Death-rate	29·28

An improved water-supply is under consideration for the Bharatpur City; and, if the schemes be carried out, the health of the people of this capital must be materially benefited. The sanitation of the city is receiving much attention from a Sanitary Board, which is presided over by the Agency Surgeon. Village sanitation is still backward.

47. *Alwar*—

Population	52,398
Birth-rate	28·15
Death-rate	33·34

The water-supply is from wells; it is sufficient and fairly good. There is a good conservancy system in force under the Municipal Committee and Agency Surgeon, and the drainage is good. Village sanitation in that State is progressing satisfactorily, and the protection of the water-supply is supervised by the Agency Surgeon throughout the State.

48. *Karaoli*—

Population	23,124
Birth-rate	26·29
Death-rate	22·18

The water-supply in Karaoli City is abundant and good from wells. The city is clean and well drained; the Municipal Committee take considerable interest in sanitation. Village sanitation requires attention.

49. *Dholpur*—

Population	9,739
Birth-rate	16·43
Death-rate	17·25

The water-supply of Dholpur is sufficient and of fair quality. The sanitation of the Dholpur capital is primitive, and village sanitation is very backward.

50. *Bundi*—

Population	22,544
Birth-rate	14·15
Death-rate	17·30

The water-supply of Bundi is from wells and tanks, and it sometimes becomes scarce in the hot weather. The sanitary arrangements are under a Munsarim, and they are primitive; however, the main street is clean and naturally well drained. A larger staff of public sweepers is required, and carts should be introduced to remove the refuse and night-soil. Village sanitation also requires attention.

51. *Tonk*—

Population	46,069
Birth-rate	6·01
Death-rate	9·59

Water is obtained from wells, and there is a river, a short distance from the town, where abundance of good water can be obtained.

52. A Municipal Committee has charge of the conservancy. The sanitary system is still very defective, and buffalo carriage should be abolished in favour of carts. Village sanitation should be taken up.

53. *Shahpura*—

Population	11,718
Birth-rate	19·79
Death-rate	16·29

The water-supply of Shahpura is abundant from tanks and wells. The conservancy arrangements are very primitive, and there is no responsible authority to superintend them. Village sanitation has not yet been taken up.

54. *Kotah*—

Population	38,624
Birth-rate	28·95
Death-rate	44·66

The scheme for a water-supply from the Chumbal river is still under consideration. The Agency Surgeon suggests that a Silchar cinerator should be erected for the disposal of the city refuse. The sanitation is carefully supervised by a Municipal Committee, but village sanitation requires more attention.

55. *Jhalrapatan*—

	New.	Old.
Population	22,381	10,783
Birth-rate	9·58	17·71
Death-rate	12·02	9·74

The water-supply is abundant from wells and tanks for both towns. The conservancy system of the Chaoni is good. Village sanitation requires more attention.

56. *Udaipur*—

Population	46,693
Birth-rate	27·43
Death-rate	37·37

The water-supply of Udaipur City, from tanks and wells, is abundant, but not of the best quality. An improved water-supply is under consideration, and, if the schemes be carried out, the health of the people of this capital must be materially benefited.

57. Although the conservancy system has lately been improved, it is still behind the other great capitals, especially in superintendence, which is only

done by the Police. Insanitary trades are even now carried out within the city walls. Village sanitation does not receive much attention, but some of the large towns are regularly cleaned.

58. *Kishangarh*—

Population	15,363
Birth-rate	28·64
Death-rate	15·30

The water-supply is abundant and of fair quality, and the natural drainage of the town is fairly good. The conservancy arrangements are under the Municipal Committee, but the staff of sweepers is too small for the requirements of the city. Carts should be introduced instead of pack carriage. Village sanitation has not yet received much attention.

59. *Partabgarh*—

Population	14,819
Birth-rate	24·69
Death-rate	29·29

The water-supply of this town is from wells; it is at times deficient and of inferior quality. The sanitary arrangements are under the Municipality, but not properly supervised. The conservancy system is defective, and more sweepers are required. Village sanitation has hardly been thought of.

60. *Banswara*—

Population	8,234
Birth-rate	23·20
Death-rate	18·05

There is an abundant water-supply from wells and tanks, and it is of good quality; the natural drainage of the town is fairly good, but unhealthy trades are carried on within town limits, and the conservancy system is both primitive and bad.

61. *Dungarpur*—

Population	6,000
Birth-rate	...
Death-rate	...

The water-supply of Dungarpur is sufficient and of fair quality from wells and tanks. Offensive trades are carried on within the town; the conservancy arrangements are under the Kotwal, but they are primitive and bad. The natural drainage is good. It is hoped the sanitary condition of the town will now be improved.

62. *General remarks.*—Undoubted and steady progress is being made in sanitation in Rajputana, especially in some of the capitals and large towns, and many of the educated people are beginning to recognise the necessity for the observance of the laws of health.

63. Village sanitation is beginning to receive some attention in most places, and endeavours are being made to place medical subordinates at the head of the Sanitary Departments. Village sanitation is receiving particular attention in Alwar.

64. Residency and Agency Surgeons have been encouraged to spend as much of the cold weather as possible in camp, where they have had opportunities of advising village authorities in the sanitary measures which could easily be carried out. With the exercise of tact, patience, and judgment on the part of the medical officer the people can be prevailed upon to protect

their water-supply, and do much to improve the sanitary condition of their surroundings, which would not be readily accomplished by Darbar orders.

VACCINATION.

TABLE 9.—*Abstracts of Statements I and II.*

		Average number of vaccinators.	Primary Vaccination.			Re-vaccination.			Cost.		Average number of operations by each vaccinator.
			Total.	Successful.	Percentage.	Total.	Successful.	Percentage.	Total.	Per successful case.	
									R a. p.	Pies.	
Ajmer Division	1897-98 .	13	16,480	16,272	98·74	75	46	61·33	2,176 3 11	26	1,273
	1898-99 .	13	17,816	17,541	98·46	132	86	65·15	2,184 13 9	24	1,380
Native States	1897-98 .	235	296,933	292,630	98·55	1,829	1,471	80·43	32,338 12 6	21	1,271
	1898-99 .	242	334,374	331,946	99·27	1,309	727	55·54	31,715 1 9	18	1,387

65. The above table shows the primary vaccinations and re-vaccinations performed both in Ajmer-Merwara and in the Native States of Rajputana during the official years of 1897-98 and 1898-99, and the total cost of this department.

66. The primary vaccinations rose in the Ajmer Division from 16,480 in 1897-98 to 17,816 in the year under report, and 98·46 per cent. of these were successful. Re-vaccinations rose from 46 to 86 successful operations.

67. The average number of operations performed by each vaccinator rose from 1,273 to 1,380, and the expenditure on this department rose slightly on account of increased allowances to vaccinators, *viz.*, from R2,176-3-11 in 1897-98 to R2,184-13-9 in 1898-99.

68. The cost of each successful case was 24 pies, as compared with 26 pies in 1897-98.

69. The number of vaccinators was 13, as in the previous year, and there was one Native Superintendent employed as before.

70. During the year under report 32·50 per mille of the population of Ajmer-Merwara were vaccinated, against 30·09 in the previous year; and, although it is satisfactory to be able to note an increase in this direction, there is still much more to be done, as it is obvious many children even now remain unprotected.

71. The Civil Surgeon inspected 78 against 179 vaccinations in the previous year. He has no leisure for the inspection of vaccination, and it is therefore proposed to appoint an Assistant Surgeon to Ajmer to enable the Civil Surgeon to do more district work. Vaccination undoubtedly requires more European supervision in Ajmer-Merwara.

72. Another vaccinator is about to be appointed to Merwara, and this is a much-needed appointment, as the present staff cannot nearly do the work now required in that district.

73. The Native Superintendent of Vaccination in Ajmer-Merwara inspected 488 villages and saw 8,225 vaccinated children, against 7,954 in the previous year.

74. Section 3 of the Vaccination Act, XII of 1880, has, by the orders of the Chief Commissioner, Ajmer-Merwara, been applied to the Kekri Municipality, and this will undoubtedly do much to promote vaccination and save infant life there.

75. In Native States there was a very large increase in primary vaccinations, *viz.*, 334,374 against 296,933 in 1897-98, and the percentage of success rose from 98·55 to 99·27. The increase in the number of primary operations performed and in the successful percentage both indicate satisfactory progress. It is also worthy of note that Vaccination Returns have been received from Bundi during the year under report.

76. There were 242 vaccinators employed, against 235 in the previous year; 4 additional vaccinators were employed in Mewar, 3 in Marwar, 2 in Sirohi, 1 in Bikaner, and 1 in Jaisalmer, and 4 less in Kishangarh, 1 less in Alwar, and 1 in Jhalawar. Two vaccinators were employed in Bundi, but they did very little; however, it is hoped they will work better now under the new Agency Surgeon.

77. The average number of operations performed by each vaccinator rose from 1,271 to 1,387; but the work varied in different States from 3,505 operations in Jhalawar to 190 in Bundi.

78. The average cost of each successful vaccination was 18 pies, against 21 in the previous year, and it varied in different States from 8 pies in Bharatpur to 110 in Banswara.

79. Re-vaccination has not yet been much practised in Rajputana States, as people long accustomed to one inoculation for small-pox are difficult to persuade to submit their children to a second vaccination, and it is not considered advisable to press this point too much, until they have thoroughly realized the advantages of primary vaccination. Consequently, only 727 successful operations were performed during the year under report, and 395 of these were done in Bikaner State, where a few of the advanced people have taken to it.

80. Of the vaccination work inspected by the Residency and Agency Surgeons, 98·53 per cent. were found successful, and of that by Native Superintendents, 98·23 per cent.

81. In Jodhpur State 89,337 primary vaccinations were performed, against 88,688 in the previous year, and 99·59 of these were successful. Of the operations performed, 72·26 per cent. were verified by the Residency Surgeon and other Inspectors. Three more vaccinators were employed during the year under report, one of whom is a female vaccinator appointed to work among "pardah" families in the districts. A female vaccinator has been employed at Jodhpur for some years, and the result has been so satisfactory that it is considered advisable to extend the work gradually to out towns and villages.

82. There were 76,254 primary vaccinations performed in Jaipur State, against 58,458 in the previous year, and 99·89 per cent. of these operations were successful. Major Durrell Pank, I.M.S., the Residency Surgeon, has given much time to vaccination during the year, a new Native Superintendent has been appointed, and the department thoroughly reorganized. It is satisfactory to notice that the abuses brought to notice a couple of years ago have disappeared, and that an unusual increase in the successful operations has taken place.

83 In Udaipur State 23,680 primary vaccinations were performed, against 22,803 in the previous year, and 99·74 of these were successful; of the operations performed, 42·47 per cent. were verified by the Residency Surgeon and other Inspectors, against 35·75 in the previous year, which is very satisfactory.

84. The work inspected by the Administrative Medical Officer at Udaipur during the touring season was of the very best quality, and vaccination is undoubtedly now making good progress among the people of this State.

85. In Bharatpur State 41,027 primary vaccinations were performed against 37,576 in the previous year, and 99·17 of these operations were successful. Captain Drake-Brockman, I.M.S., the Agency Surgeon, has done much to advance vaccination during recent years, and it had lapsed into a very unsatisfactory state from want of European supervision before he went there on special duty; 49·52 per cent. of the operations performed were verified by him and other Inspectors.

86. The primary vaccinations performed in Bikaner State were more than in the previous year, *viz.*, 26,090 during the year under report against 22,784, and 99·73 per cent. of these were successful; of the operations performed, 38·16 per cent. were verified by the Civil Surgeon and other Inspectors. Satisfactory progress is being made in vaccination throughout this State.

87. In Alwar 25,186 primary vaccinations were performed, 99·90 per cent. of which were successful, against 24,186 in the previous year; the Agency Surgeon and other Inspectors verified 71·80 per cent. of the vaccinations performed. The increase in vaccination is satisfactory, and Major Harington has given much attention to the work both at head-quarters and in the districts.

88. In Kotah State 15,966 primary vaccinations were performed, against 10,760 in the previous year, of which 99·32 per cent. were successful, and in Jhalawar 10,353, against 7,224. There has been a considerable increase in the vaccinations performed and in inspections. Lieutenant-Colonel J. Crofts, I.M.S., has been zealous in the cause of vaccination, but the staff of vaccinators employed is insufficient, and there should be a Native Superintendent for these States.

89. There were 2,334 primary vaccinations performed in Jaisalmer State, against 1,757 in the previous year, and of these 98·41 per cent. were successful. The year has been one of considerable difficulty for the vaccinators on account of the scarcity of water throughout the State. The Hospital Assistant in charge of the dispensary there has been appointed Deputy Superintendent of Vaccination, and it is hoped he will be able to keep the vaccinators up to their work. The population is, however, so sparse and the country so difficult that they will never be able to perform very large numbers of vaccinations.

90. In Dholpur 5,323 primary vaccinations were performed, 92·09 per cent. of which were successful; in Tonk 4,597 primary vaccinations, 99·69 per cent. of which were successful; in Sirohi 3,670 primary vaccinations, 95·18 per cent. of which were successful; in Karaoli 3,055 primary vaccinations, 88·44 per cent. of which were successful; and in Kishangarh 2,607 primary vaccinations, 99·96 per cent. of which were successful.

91. Vaccination is advancing steadily in most of the important States of Rajputana, and, although Bundi, Banswara, Dungarpur, Partabgarh, Kishangarh, and Shahpura are still very backward in this most useful department, a commencement has been made.

92. With regard to the remarks by the Sanitary Commission on the Rajputana Report for 1896, the Administrative Medical Officer gave considerable attention to the high percentage of successful vaccinations, and he has no reason to suspect irregularities. All medical officers impress on their subordinates the imperative necessity of applying sufficient lymph to prevent failure in the first operation, and this is undoubtedly one of the most important points connected with vaccination when it is being first started. People generally, and mothers in particular, have the strongest objections to a second operation, and if unsuccessful cases be frequent, the work becomes so unpopular that it can hardly be carried on.

93. Lymph is kept up throughout the year in most of the important States by carrying on vaccination in cool places during the hot weather, and humanized lymph is generally used; however, calf lymph is now being much used, especially in Jodhpur and Alwar, and it has many advantages over ordinary lymph. It does away with the great aversion which the people of this country have to giving the lymph from their children for those of others, and also with caste prejudices, as there are not a few who object to lymph taken from the children of castes other than their own. Buffalo calves are employed, and it is hoped to extend the use of this lymph throughout Rajputana during the coming cold season.

TABLE 10.—*Verification of Returns of Vaccination.*

NAME OF DISTRICT OR STATE.	SUPERINTENDENT AND NATIVE SUPERINTENDENT.	Number of towns and villages visited.	SUCCESSFUL CASES SEEN. Three good marks.	Two good marks.	One good mark.	Total.	Unsuccessful cases seen.	Total number seen.	Percentage of success amongst cases seen.	Number of vaccinations and re-vaccinations in each State.	Percentage of cases seen to total number of vaccinations and re-vaccinations.

* The Staff Surgeon, Nasirabad, performed the duties of Superintendent.
† The Residency Surgeon, Jaipur, also supervises operations in Kishangarh.
‡ The Residency Surgeon, Western Rajputana States, also supervises operations in the Jaisalmer and Sirohi States.
§ The services of Hospital Assistants were utilized for a short time as Native Superintendent.
‖ The Residency Surgeon, Mewar, also supervises operations in Partabgarh, Banswara, and Dungarpur.

94. The above table shows the verification of vaccination by the Civil Surgeon, Ajmer, by the Residency and Agency Surgeons, and by subordinate Inspectors.

95. The Residency Surgeon, Jodhpur, inspected 552 towns and villages in Marwar, Sirohi, and Jaisalmer, and saw 12,458 children, 98·55 per cent. of whom had been successfully operated upon. The Residency Surgeon, Jaipur, inspected 329 towns and villages in Jaipur and Kishangarh, and saw 9,480 vaccinated children, 98·03 per cent. of whom had been successfully operated upon. The Residency Surgeon, Udaipur, inspected 236 towns and villages in Mewar and Partabgarh, and saw 4,751 vaccinated children, 98·93 per cent. of whom had been successfully operated on. The Agency Surgeon, Alwar, inspected 695 towns and villages, and saw 7,955 vaccinated children, 99·32 per cent. of whom had been successfully operated on. The Agency Surgeon, Kotah and Jhalawar, inspected 774 towns and villages, and saw 5,105 vaccinated children, 95·00 per cent. of whom had been successfully operated upon. The Civil Surgeon, Bikaner, inspected 114 towns and villages, and saw 3,541 vaccinated children, 98·30 of whom had been successfully operated upon. The Agency Surgeon, Bharatpur, inspected 132 towns and villages, and saw 5,521 vaccinated children, 99·76 per cent. of whom had been successfully operated upon. The Superintendent of Vaccination, Nasirabad, saw 803 vaccinated children, 98·38 per cent. of whom had been successfully operated upon.

96. Residency and Agency Surgeons have done much inspection during the year under report; there is no more useful work for these officers, and nothing will tend so much to bring about thoroughness and progress in the department as their direct supervision.

97. The Administrative Medical Officer inspected vaccinations at the head-quarters and other stations which he visited, and found the work that is being done mostly very good.

Section II.—DISPENSARIES.

98. During the year under report the hospitals and dispensaries in Rajputana have increased from 154 to 157, and besides these there are 5 Mission and 6 Railway hospitals open for the treatment of patients.

99. In Ajmer-Merwara there were seven dispensaries open as in the previous year, and Agency and Salt dispensaries also remained the same as before, *viz.*, 11. Three new institutions were opened in Native States, *viz.*, one at Samode in Jaipur, one at Debari Railway Station in Mewar, and one travelling dispensary in Alwar.

100. The new hospital at Churu in Bikaner has been completed, and Assistant Surgeon Ajudhia Pati, of the Imperial Establishment, took charge of it on the 1st October 1898. The Reni and Bahadran dispensaries in Bikaner have been removed to new and suitable buildings completed during the year.

101. One block of the Bharatpur General Hospital has been completed, and a good supply of new instruments and appliances procured for it, which include the Routgenray's apparatus and sterilizers of the most approved pattern. Some important improvements have been made in the Mayo Hospital, Jaipur, and a new sterilizer has been set up for the use of the institution.

102. The Sojat dispensary in Marwar has been removed to a new and suitable building completed during the year under report, and a new dispensary has been completed at Shergarh, and will shortly be opened by the Jodhpur Darbar.

103. It is proposed to open four new dispensaries in Kotah and one in Marwar during the current year. Steady progress is being made in hospitals and dispensaries throughout Rajputana.

104. Table XI shows in a condensed form the medical relief given in Mission, Railway, and all other hospitals and dispensaries in Rajputana.

TABLE 12.—*Cases and Deaths.*

STATEMENT II.

		Cases treated.		Daily average.		Average duration.		Percentage of in-door to total cases.	Deaths.	
		In-door.	Out-door.	In-door.	Out-door.	In-door residence.	Out-door visits.		In-door.	Percentage to cases, in-door.
Ajmer Division	1897	898	61,243	34·77	375·42	14·13	2·24	1·45	123	13·69
	1898	712	53,756	28·07	347·94	14·39	2·36	1·31	62	8·71
Agency Hospitals and Salt Dispensaries	1897	641	22,857	29·21	261·72	16 63	4·18	2·73	18	2·81
	1898	604	23,111	23 35	266·81	14·11	4·21	2·55	22	3·65
Native States	1897	15,025	948,088	651·68	7,928·98	15·83	3·05	1·56	737	4·90
	1898	14,374	922,951	688·68	7,821·35	17·49	3·09	1·53	440	3·06

105. The above table shows that 712 in-door and 53,756 out-door patients were treated in all hospitals and dispensaries of Ajmer-Merwara, against 898 in-door and 61,243 out-door in the previous year. The decrease both in and out-door patients treated shows that the year was a healthy one. The percentage of deaths among in-door patients fell from 123 in 1897 to 62 in 1898.

106. In Agency and Salt Revenue dispensaries the in-door patients fell from 641 to 604, while the out-door rose from 22,857 to 23,111. The increase in out-door patients is satisfactory as indicating greater popularity of European methods of treatment, as patients from the villages adjacent to these dispensaries make up much of the out-door attendance. The mortality in these hospitals rose from 18 to 22, but the increase was due to special causes rather than to unhealthiness of the season.

107. In the hospitals and dispensaries of Native States 14,374 in-door and 922,951 out-door patients were treated, against 15,025 in-door and 948,088 out-door in the previous year. The falling off in the number of patients treated may be attributed to the better condition of the people and the healthiness of the year. The percentage of deaths of in-door patients in all dispensaries also fell during the year under report, *viz.*, from 4·90 in 1897 to 3·06 in 1898.

108. There was an increased attendance at the hospitals and dispensaries of ten States and a decrease at the hospitals and dispensaries of the other States.

TABLE 13.—*Causes of Admissions and Deaths.*

STATEMENT III.

		PERCENTAGE TO TOTAL CASES AND DEATHS.									
		Malarial fevers and spleen.	Cholera.	Rheumatism.	Diseases of the eye.	Lungs and respiratory diseases.	Diarrhœa and Dysentery.	Ulcer.	Skin diseases.	Injuries.	All others.
		Cases, In-door and Out-door.									
Ajmer Division	1897	23	0·01	4	12	6	4	9	10	3	29

	1898	9	...	...	...	68	5	...	...	...	18
Native States	1897	3	...	·54	...	24	30	3	·68	6	33
	1898	7	...	1	...	23	18	2	·68	8	40

109. The above table shows the causes of admissions and deaths in all hospitals and dispensaries in Rajputana.

110. Malarial fevers and spleen diseases were, as usual, the most common ailments met with at the hospitals and dispensaries. These affections gave rise to 17 per cent. of the total treated in the Ajmer Division, against 23 per cent. in the previous year; but they were less severe, and the deaths from them were 8 against 18 per cent. in 1897. In Agency and Salt Revenue dispensaries 30 per cent. of the total treated were for malarial fevers and spleen diseases, as in the previous year; and the deaths from these causes rose from 5 to 9 per cent. in 1898. In the hospitals and dispensaries of Native States the admissions for malarial fevers and spleen diseases fell from 19 to 15 per cent. of the total treated, but the mortality from these causes rose from 3 to 7 per cent.

111. The year was, as regards the above named diseases, a fairly healthy one.

112. In the Ajmer Division 7 per cent. of the total treated were for lung and respiratory diseases, against 6 per cent. in the previous year, and the death-rate was also higher from these causes, *viz.*, 32 against 19 per cent.; in Agency and Salt dispensaries 10 per cent. of the total treated were for lung and respiratory diseases, against 9 in the previous year, and 68 per cent. of the deaths were from these affections, against 78 recorded in 1897, and in Native States dispensaries they gave rise to 8 per cent. of the total treated, against 6 per cent. in the previous year, but the death-rate from these affections fell from 24 per cent. in 1897 to 23 per cent. in 1898.

113. Diarrhœa and dysentery gave rise to 3 per cent. of the total treated in Ajmer-Merwara, against 4 in the previous year, and to 26 per cent. of the deaths as in 1897; in Agency and Salt dispensaries to 5 per cent. of the total treated as in the previous year, and 5 against 12 per cent. of the total deaths were due to these affections; and in Native States 4 against 5 per cent. of the total treated, and 18 against 30 per cent. of the deaths. The decrease both in the numbers treated and in the mortality may be attributed to the healthiness of the year.

114. Injuries were almost the same as in the previous year, and there was a slight increase in the numbers treated for eye affections in all institutions in Rajputana.

TABLE 14.—*Cases of Leprosy treated in the Dispensaries of Rajputana.*

	For the year											
	1893.		1894.		1895.		1896.		1897.		1898.	
	Number of dispensaries.	Number of cases treated.	Number of dispensaries.	Number of cases treated.	Number of dispensaries.	Number of cases treated.	Number of dispensaries.	Number of cases treated.	Number of dispensaries.	Number of cases treated.	Number of dispensaries.	Number of cases treated.
Ajmer-Merwara District .	7	77	7	21	7	26	7	44	7	23	7	27
Agency Hospitals and Salt Dispensaries . . .	11	18	12	14	12	21	11	7	11	2	11	1
Native States . . .	120	812	125	754	129	788	131	791	136	625	139	610
TOTAL .	138	907	144	789	148	835	149	842	154	650	157	638

115. The above table shows the cases of leprosy treated at all hospitals and dispensaries in Rajputana.

116. There were 638 cases of leprosy treated in Rajputana hospitals and dispensaries during the year under report, against 650 in the previous year and 842 in 1896. This disease again shows a decrease, as if it were becoming less prevalent in this part of the country, although no specific treatment has been found to bring about this very desirable effect.

117. *Small-pox.*—Cases of small-pox were reported from Ajmer-Merwara, and from 12 against 14 States of Rajputana in the previous year. There were 409 deaths reported in Ajmer-Merwara from this disease, and 590 in Native States, against 158 in the Ajmer-Division and 817 in Native States in 1897. The marked progress now being made in vaccination in most of the States of Rajputana is doing much to mitigate the ravages of this disease. In Ajmer-Division all the deaths occurred in rural circles where vaccination is backward. Compulsory vaccination in Ajmer and Kekri towns has proved useful.

118. *Snake-poisoning.*—Calmette's antivenine is kept in stock, and it will be used when opportunity offers.

Bubonic Plague.

119. Between the 1st of April and the end of September 1898 no bubonic plague was imported into Rajputana from the infected area; however, after the latter date, occasional cases began to appear on the Railway, and up to the end of March 1899 there were 15 cases of plague or suspected plague discovered by the inspecting officers, 14 of which proved fatal. The precautions taken were fortunately sufficient to prevent the spread of the disease, and no indigineous plague followed the importations.

120. None of the imported cases were allowed into villages, and this was no doubt the saving of the province. The Rajputana border has been much exposed to an invasion of plague, and must have long ago been overrun by the disease, if strict watch had not been kept up.

121. Inoculations have been carried out on contacts with Professor Haffkine's prophylactic when this has been possible, but there has not been much opportunity of judging of its effects.

Table 15.—*Sex, Age, and Caste.*

Statement IV.

		Percentage of the total treated.				
		Men.	Women.	Children.	Hindu.	Musalman.
Ajmer Division	1897	53	18	29	71	24
	1898	52	19	29	71	23
Agency Hospitals and Salt Dispensaries.	1897	62	15	23	38	43
	1898	63	15	22	53	28
Native States	1897	53	20	27	67	27
	1898	54	20	26	67	27

122. The above table shows the sex and caste of the attendance at the hospitals and dispensaries throughout the country.

123. This table varies very little from year to year in the proportions of men, women and children, and of Hindus and Mahomedans. In Ajmer there were more women and fewer Musalmans; in agency and salt dispensaries there were more children and Hindus, and the proportion of Musalmans treated was unusually low, *viz.*, 28 against 43 in 1897; in Native States men were the most numerous patients.

124. The population is largely Hindus, so the attendance at the ordinary hospitals and dispensaries shows a high percentage of these castes.

TABLE 16.—*Operations.*

TOTAL	3,463	3	3,019	2	58,541	40	61,470 *	40

* Includes 461 operations performed in the Agency Hospitals and Salt Dispensaries.

125. The above table shows the operations performed both in Ajmer-Merwara and in Native States during 1897 and 1898, according to the new nomenclature of diseases which requires all surgical operations to be returned under one heading.

126. In the Ajmer Division 3,019 operations were performed against 3,463 in the previous year, with only 2 against 3 deaths.

127. Of the operations performed in this division, 1,187 were done in the Ajmer General Hospital, 1,090 in Beawar, 236 in Todgarh, 183 in Kekri, 134 in Pisangan, 96 in Deolia and 93 in Ramsar Dispensary.

128. At Ajmer and in out-dispensaries 51 extractions of the lens for cataract were performed, 88·25 per cent. of which were followed by good vision. At Beawar 15 extractions of the lens for cataract were performed, all of which were followed by good sight. In Ajmer only two litholapaxies were performed, in Beawar 6 litholapaxies and 4 lithotomies, all successful; 4 amputations were performed in Ajmer, 2 in Beawar, and 2 in Todgarh, without a death.

129. In Native States Hospitals and Dispensaries 61,470 operations were performed against 58,541 in 1897, with 40 deaths as in the previous year. Of these operations, 1,583 were extraction of the lens for cataract, 89 litholapaxies, 70 lithotomies, and 141 amputations, against 1,311 extractions of the lens, 43 litholapaxies, 78 lithotomies, and 117 amputations in 1897.

130. In Jaipur, Kishangarh, and Sambhar 12,073 operations were performed, with 11 deaths; of these, 640 were extractions of the lens for cataract, 34 successful litholapaxies, 3 lithotomies and 1 lithotrity. Most of the important operations were performed in the Mayo Hospital, Jaipur, by the Residency Surgeon.

131. In Jodhpur, Jaisalmer and Sirohi 10,557 operations were done with 4 deaths; 743 of these were extractions of the lens for cataract, 45 litholapaxies, and 34 lithotomies. Most of the cataracts and litholapaxies were performed in the Hewson Hospital at Jodhpur by the Residency Surgeon.

132. In Udaipur, Partabgarh, Banswara and Dungarpur 7,930 operations were performed, with 5 deaths; 54 of these were extractions of the lens for cataract, and 12 lithotomies. Most of the important operations were done in the Lansdowne Hospital at Udaipur by the Residency Surgeon, and in Bhilwara Dispensary by Hospital Assistant Hashmat Ali.

133. In Bharatpur 4,612 operations were performed, with 2 deaths. There were 14 extractions of the lens for cataract, 1 litholapaxy, and 1 amputation performed.

134. In Bikaner 5,849 operations were performed with 3 deaths, of which 47 were extractions of the lens for cataract, 1 litholapaxy, and 6 lithotomies. Major W. H. B. Robinson, I.M.S., performed 43 extractions of the lens for cataract, 1 litholapaxy and 2 lithotomies in the Bhagwan Das Hospital at Bikaner.

135. In Kotah and Jhalawar 6,248 operations were performed with 6 deaths; 58 of these were extractions of the lens for cataract, and 3 successful lithotomies. The Agency Surgeon, Kotah and Jhalawar, performed 56 extractions of the lens for cataract and 3 lithotomies.

136. In Karaoli 1,933 operations were performed against 1,774 in the previous year; in Dholpur 1,072 against 1,064; in Tonk 1,548 against 1,481; in Shahpura 1,017 against 888; and in Bundi 757 against 443.

137. Third Class Hospital Assistant Zahur Peer, now in charge of the Jalore Dispensary in Marwar, performed the largest number of important operations among Hospital Assistants; he also did the largest number of lithotomies, *viz.*, 15. First Class Hospital Assistant Yusaf Narain of Udaipur performed the largest number of eye operations in this class.

138. It is satisfactory to note that good progress is being made in surgery throughout the States of Rajputana. Ophthalmic and obstetric operations have particularly increased in the Women's Hospitals at Jodhpur, Ulwar, and Tonk.

TABLE 17.—*Surgical operations for Mycetoma.*

NAME OF OPERATION.		Number.
Amputations	Thigh	3
	Leg	13
	Foot	3
Excision of soft parts		79
	TOTAL	98

139. The above table shows the operations performed for mycetoma during the year. Many of these have been excisions of soft parts, where the disease has been met with in the early stage when it could be successfully dealt with in this way and the limb saved.

140. There were 19 amputations and 79 excisions of soft parts performed against 29 amputations and 67 excisions in the previous year; 55 of the operations were performed in Marwar, 31 in Bikaner, 5 in Jaipore, 3 in Mewar, 2 in Jaisalmir, 1 in Sirohi and 1 in Ajmer.

141. The above table shows the important operations performed by each Medical Officer, Lady Doctor, Assistant Surgeon and Hospital Assistant during the year under report, and many operations hitherto shown have been omitted on account of their being of comparatively less importance than those under the headings now given.

TABLE 19.—*Expenditure.*

STATEMENT V, PART I.

		1897.	1898.	Percentage on the total cost of 1898.
		R	R	R
AJMER DIVISION	ON ESTABLISHMENT—			
	Paid by Government—			
	1. Medical Officers	3,135	2,945	26·68
	2. Compounders, Dressers, etc.	310	330	3·00
	3. Menial Servants	201	180	1·63
	Paid from local sources as salaries—			
	1. Medical Officers	840	840	7·60
	2. Compounders, Dressers, etc.	624	585	5·30
	3. Menial Servants	592	541	4·90
	4. On Bazaar Medicines	439	345	3·12
	5. On Europe Medicines	1,939	2,124	19·24
	6. On Diets	1,199	955	8·65
	7. On Miscellaneous charges	1,341	1,933	17·51
	8. On Buildings and repairs	137	262	2·37
	TOTAL	10,757	11,040	100
AGENCY HOSPITALS AND SALT DISPENSARIES.	ON ESTABLISHMENT—			
	Paid by Government—			
	1. Medical Officers	5,579	5,411	52·50
	2. Compounders, Dressers, etc.	1,020	1,020	9·90
	3. Menial Servants	905	910	8·83
	Paid from local sources as salaries—			
	1. Medical Officers	...	...	...
	2. Compounders, Dressers, etc.	...	...	...
	3. Menial Servants	...	...	...
	4. On Bazaar Medicines	210	226	2·19
	5. On Europe Medicines	1,629	1,697	20·02
	6. On Diet	...	2	·02
	7. On Miscellaneous charges	564	549	5·33
	8. On Buildings and repairs	93	125	1·21
	TOTAL	10,000	9,940	100
NATIVE STATES	ON ESTABLISHMENT—			
	Paid by Government—			
	1. Medical Officers	600	600	0·21
	Paid by Native States as salaries—			
	1. Medical Officers	93,327	1,01,148	35·60
	2. Nursing Establishment	1,026	1,034	·36
	3. Compounders, Dressers, etc.	22,887	24,732	8·70
	4. Menial Servants	17,184	18,793	6·62
	5. On Bazaar Medicines	7,191	6,941	2·44
	6. On Europe Medicines	60,027	58,920	20·74
	7. On Diet	26,686	23,298	8·20
	8. On Miscellaneous charges	19,555	22,611	7·96
	9. On Buildings and Repairs	64,345	26,051	9·17
	TOTAL	3,12,828	2,84,128	100
		Pies.	Pies.	
AJMER DIVISION	Cost per case treated	33	39	
	Cost per diet per diem	25	22	
AGENCY HOSPITALS AND SALT DISPENSARIES	Cost per case treated	82	80	
	Cost per diet per diem	...	5	
NATIVE STATES	Cost per case treated	62	58	
	Cost per diet per diem	26	21	

142. The above table shows the total expenditure on hospitals and dispensaries, and also the cost of each case treated.

143. In the Ajmer-Merwara dispensaries expenditure rose from R10,757 to R11,040 in the year under report; the increase was mainly due to Europe medicines, miscellaneous charges, and buildings.

144. The pay and allowances of the Health Office establishment were paid from the Ajmer Dispensary Fund, under the heading "Miscellaneous charges," and R166 were spent in repairing the Kekri Dispensary building.

145. The percentage of the total cost paid by Government fell from 50·66 to 48·36. The cost of establishment paid by Government was less than in the previous year on account of the retirement of the Senior Hospital Assistant in charge of the Ajmer General Hospital on the 1st April 1898.

146. The invested capital amounted to R8,500, the same as in 1897.

147. The subscriptions from both Europeans and Natives show an increase of R463 over those of the previous year.

148. Each case treated cost 39 against 33 pies in the previous year, and this was due to the increase in expenditure on miscellaneous charges. The price of each diet per diem was 22 against 25 pies in 1897.

149. The expenditure statement of the General Hospital, Ajmer, showed an increase of R88 at the end of the year, and consequently the floating cash balance decreased from R534 to R446.

150. The financial position of the Kekri, Pisangan, Deolia, Ramsar and Beawar Dispensaries is now satisfactory. There is only a debit balance of R297-15-11 against the Todgarh Dispensary, and all the others have a balance to credit.

151. In the Abu and Abu Road Dispensaries the expenditure fell from R1,962 to R1,821, due to a reduction of charge on Europe medicines.

152. In the Political Agency and Salt Revenue Dispensaries the expenditure rose from R10,000 to R10,307, as there was more expenditure on Europe medicines than in the previous year.

153. The expenditure on hospitals and dispensaries in the Native States of Rajputana fell from R3,12,828 to R2,84,128. The expenditure on buildings and repairs fell from R64,345 to R26,051, as no new buildings were constructed during the year under report.

154. There was a considerable increase in expenditure on establishment and miscellaneous charges owing to the opening of new dispensaries, and prevention arrangement of plague, in Native States. The expenditure on Europe medicines, bazaar medicines, and diets, fell from R60,027, R7,191, and R26,686 to R58,920, R6,941, and R23,298, respectively.

155. Of the total cost of hospitals and dispensaries in these States, R56,724 were expended in Jaipur, R47,367 in Jodhpur, R37,382 in Bikaner, R26,201 in Udaipur, R23,303 in Alwar, R20,370 in Bharatpur, R19,807 in Kotah, R14,321 in Jhalawar, R8,646 in Tonk, R5,598 in Dholpur, R4,266 in Karaoli, R2,898 in Sirohi, R2,643 in Jaisalmir, R2,330 in Bundi, R1,628 in Kishangarh, R1,547 in Banswara, R1,353 in Pertabgarh, R1,254 in Dungarpur and R1,113 in Shahpura.

156. The increase in expenditure in Dungarpur has been caused by the appointment of a qualified Hospital Assistant to the dispensary instead of the unqualified practitioner hitherto in charge there.

157. A well qualified Hospital Assistant is much needed in Bundi, where the medical arrangements are still very backward.

158. Each case treated cost 58 against 62 pies in the previous year, and this was mainly due to the decrease in expenditure on buildings and repairs.

MISSION HOSPITALS.

159. There are five Mission Hospitals in Rajputana as in the previous year, *viz.*, two at Ajmer, one at Nasirabad, one at Udaipur, and one at Jodhpur.

160. In the Mission Hospital at Ajmer 18,205 new out-door patients were treated, the re-attendance or old cases treated numbered 49,232, the in-ptaients 71, and the operations 1,032, of which only 22 have been described as major operations under the old nomenclature of diseases. In the Women's Hospital at Ajmer 2,309 new cases were treated, the old cases or re-attendance numbered 5,804, the in-door patients 30 and the operations 248, of which 6 have been returned as major operations. Besides 557 visits were paid by the hospital staff to people at their houses, and medicines and medical advice given. In Nasirabad 7,776 new out-door patients were treated, the old cases or re-attendance numbered 15,552, and the in-door patients 192; there were 848 operations performed, of which 42 were major operations. In Udaipur 14,667 new cases were treated, the old cases or re-attendance numbered 40,174, the in-patients 342 and the operations 1,498, of which 77 have been described as major operations. In Jodhpur 6,811 new out-door patients were treated, the re-attendance or old cases treated numbered 30,627, and the in-door patients 78; there were 975 operations performed, 86 of which have been returned as major operations under the old nomenclature. Besides 1,111 visits were paid by the hospital staff to people at their houses.

161. Much good work is being done in these hospitals, and the Women's Hospital is especially useful to the people at Ajmer, where there is no other women's hospital for *purdah-nashins* to be properly treated.

RALWAY HOSPITALS.

162. There are six Railway Hospitals on the Rajputana-Malwa Railway within the limits of Rajputana, *viz.*, one at Abu Road, one at Sojat Road, two at Ajmer, one at Phalera and one at Bandikui.

163. In the Ajmer Railway Hospitals 7,456 out and 249 in-patients were treated and 104 minor operations performed. Besides, 236 patients were visited at their houses by the hospital staff. In Phalera Hospital 1,971 patients were treated; in Bandikui 23,294 patients were treated, and 18,240 visited at their houses; in Sojat Road 5,403 patients were treated and 95 minor operations performed; and in Abu Road 2,989 patients were treated and 105 minor operations performed. No major operations appear to have been performed in the Railway dispensaries.

INSPECTION.

164. The Administrative Medical Officer in Rajputana inspected all the hospitals and dispensaries at the head-quarter stations of Residencies and Political Agencies, and also the institutions at Ajmer, Tonk, Bundi and Dholpur, and made frequent inspections of the plague prevention arrangements, during the year.

SALE OF QUININE.

165. During the year 1898 quinine was offered for sale at 135 against 133 post offices in the previous year. In these post offices 325 packets of 102 powders each, equal to 33,150 doses of quinine of 5 grains each, were sold, against 460 packets equal to 46,920 doses in the year 1897. The falling off in sales may be attributed to the much less prevalence of malarial fevers and the general healthiness of the year.

166. The largest number of packets of quinine disposed of was in Mewar, *viz.*, 135, equal to 13,770 doses of 5 grains each, and 30 packets each were sold in Kotah and Ajmer-Merwara.

167. There was a falling off in the sales effected in Merwara and Sirohi, *viz.*, 57 against 129 packets and 21 against 35 packets in 1897, and only a few powders each were disposed of in Alwar, Bikaner, Jhalawar, Jaipur and Kishangarh.

168. As in the previous year the largest sales were effected in towns near the railway, and the drug is not yet much appreciated by the ordinary villagers, except in dispensary towns, where they can get it free of charge; it has, however, been decided to continue the scheme for a further period, as this can be done at little cost to the States.

SECTION III.—JAILS.

TABLE 20.—*Cases and Deaths.*

		Number of Jails.	Average number of prisoners of all classes.	Cases in hospital.	Daily average sick.	Death.	Average duration of cases in days.	Percentage of deaths to cases.	DEATH-RATE PER THOUSAND PRISONERS PER ANNUM.				
									TOTAL.	*Quarters of the year.*			
										First.	Second.	Third.	Fourth.
Ajmer Division	1897	1	292·52	79	4·33	2	20	2·53	6·84	13·68	...	...	13·68
	1898	1	287·74	75*	4·41	4	21	5·33	13 90	13·88	...	..	41·68
Native States	1897	20	4,919·73	5,888	124·95	116	8	1·97	23·58	12·16	14·64	27 64	39·84
	1898	20	4,679·58	3,636*	112·32	90	11	2·47	19.23	23.92	16·24	13 68	23·08

* The number of sick remaining on 31st December 1897 has been included.

169. The above table shows that the average daily number of prisoners in the Ajmer jail and the number of sick were less than in the previous year, *viz.*, 287·74 and 75 against 292·52 and 79 in 1897, but the average daily sick and mortality was more than in the previous year, *viz.*, 4·41 and 4 against 4·33 and 2, respectively.

NATIVE STATES JAILS.

170. Returns have been received from 20 jails in the Native States of Rajputana, as in the previous year.

171. The daily average number of prisoners in these Jails fell from 4,919·73 in 1897 to 4,679·58 in 1898, and the total treated in hospital fell from 5,888 to 3,636, which may be attributed to the greater healthiness of the season, as well as to improved jail management. The daily average sick fell from 124·95 to 112·32, the mortality from 116 to 90, and the death-rate from 23·58 to 19·23 per mille.

TABLE 21.

YEAR.	PRICE OF WHEAT PER RUPEE.		AJMER DIVISION.		NATIVE STATES.	
	Seers.	Chittacks.	Average number of prisoners.	Death-rate per thousand.	Average number of prisoners.	Death-rate per thousand.
1894 . .	14	1	333·10	18·01	4,383·42	28·29
1895 . .	13	6½	330·78	45·35	4,556·76	28·09
1896 . .	9	8	301·77	13 26	4,792·23	2817
1897 . .	8	12	292·52	6·84	4,919·73	23·58
1898 . .	12	1	287·74	13·90	4,679·58	19·23

172. The above table shows the average price of wheat for five years, and the average prisoners in Ajmer, and in Native States Jails, as well as the death-rate per thousand of population.

173. The mortality in the Ajmer Jail has been high during the year under report, and this has been attributed to the fact that some of the convicts were old and in indifferent health on admission. The season has, however, been an unhealthy one in Ajmer city and suburbs, and the water-supply has been indifferent, which may account for some of the increased mortality.

174. The death-rate in the jails of Native States has steadily improved during recent years, and this may be attributed to better jail management.

TABLE 22.—*Causes of admissions and deaths.*

STATEMENT III.

		PERCENTAGE TO THE TOTAL CASES AND DEATHS.									
		Malarial fever and spleen.	Cholera.	Rheumatism.	Diseases of the eye.	Lungs and respiratory diseases.	Dysentery and diarrhœa.	Ulcers.	Skin diseases.	Injuries.	All others.

Native States . .	1897	6	4	2	...	26	38	·87	...	4	19
	1898	9	...	...	...	38	17	...	...	2	34

175. The above table shows the percentage of admissions and deaths from different diseases in all the jails of Rajputana.

176. In the Ajmer Jail—Malarial fevers and spleen diseases gave rise to 16 per cent. of the total treated against 37 in the previous year, while the deaths from these causes were 25 per cent. against nothing in 1897. Lung and respiratory diseases contributed 15 per cent. of the sickness against 8 per cent. in the previous year, and 75 against 50 per cent. of the mortality. Dysentery and diarrhœa 5 against 11 per cent. of the sickness, and no deaths against 50 per cent. in the previous year. Of the 4 deaths which occurred in this jail two were from pneumonia, one from acute phthisis, and one from remittent fever. There was only 1 per cent. of skin diseases among those treated in hospital as in the previous year. Eye diseases rose from 1 to 4 per cent., and injuries from 8 to 9 per cent. of the total treated, and there was no cholera.

177. In the jails of Native States malarial fevers and spleen diseases gave rise to 31 per cent. of the sickness against 27 in the previous year, and 9 against 6 per cent. of deaths; lung and respiratory diseases to 12 against 9 per cent. of total treated, and 38 against 26 per cent. of the mortality; and dysentery and diarrhœa to 12 against 14 per cent. of sickness, and 17 against 38 per cent. of deaths. There were only 5 and 2 per cent. of ulcers and injuries among the treated in hospitals, as in the previous year.

178. There was no cholera in the jails of Rajputana in 1898.

179. *Jodhpur.*—There was considerable improvement in the Jodhpur Jail. The admissions fell from 583·35 to 391·71 per mille of average strength, the daily average sick from 16·62 to 10·06, and the death-rate from 10·82 to 9·52. Out of 7 deaths reported, 5 were from pneumonia, 1 from spleen and 1 from debility and old age. The results of lessened population has been satisfactory.

180. *Jaipur.*—Both the jails at Jaipur have been generally over-crowded throughout the year; the death-rate in the Central Jail rose from 8·37 to 18·40, and in the District Jail from 8 31 to 8·87, per mille of average strength. The Residency Surgeon reports that the question regarding the necessary increase of accommodation in both jails has been brought to the notice of the Darbar, and it is hoped that the over-crowding will shortly be remedied.

181. *Kishangarh.*—The new jail has been completed and occupied by convicts. The civil and under-trial prisoners are still in the old jail at the city. The health of the prisoners has improved, the daily average sick has fallen from 71·75 to 69·54 per mille in the year under report, and a further improvement in this direction may be anticipated.

182. *Bikaner.*—The Bikaner Jail is in excellent order as hitherto, and the prisoners are well looked after. The death-rate has fallen from 5·77 per mille in 1897 to 4·09 in the year under report.

183. *Bharatpur.*—The Bharatpur Jail is in very good order, and the prisoners are well looked after. The mortality has fallen from 33·05 to 28·29 per mille, but the daily average sick has risen considerably, *viz.*, from 29·02 per mille in 1897 to 51·47 in 1898, which was no doubt due to the malarious climate of Bharatpur. Captain Drake-Brockman, I. M.S., has done much to improve the condition of the prisoners in this jail.

184. *Alwar.*—The Alwar Jail is in very good order, and the mortality and daily average sick have fallen considerably; the former from 26·03 to 10·33 per mille, and the latter from 44·51 to 23·77 per thousand.

185. *Dholpur.*—The death-rate in Dholpur Jail has been by far the highest recorded in Rajputana during the year under report, *viz.*, 61·54 per mille of average strength. This jail is badly situated, and badly constructed; it is, however, hoped that a new jail on modern hygienic principles will shortly be built on a healthy site.

186. *Udaipur.*—This jail is in good order, but still over-crowded. The measures proposed for its improvement have now been sanctioned by the Darbar, and it is hoped more accommodation will shortly be provided to remedy the permanent over-crowding which has long existed.

187. *Karaoli.*—This jail is clean and well looked after, but there is often over-crowding; the mortality has, however, fallen from 30·89 to 20·98 per mille, and the daily average sick from 29·14 to 22·45 per mille. More accommodation is now urgently needed.

188. *Banswara.*—There has been some improvement in the health of the prisoners of this jail during the year under report; however, much cannot be expected until the site of the Jail is changed, and a properly planned building erected.

189. *Partabgarh.*—The mortality in this jail fell from 88·17 to 39·39 per mille, but the sick-rate has continued very high, and it is proposed to construct a new jail on a healthy site.

190. *Kotah.*—The Kotah Jail is in very good order. The death-rate has fallen from 35·68 to 25·12 per mille and the sick-rate from 30·51 to 20·42 per mille, which is satisfactory. The jail has been extended for the Jhalawar prisoners, and although the mortality is high the jail is in good order and never over-crowded.

191. *Jhalawar.*—There is still much scurvy in the Jhalawar Jail, but the mortality fell from 33·72 to 30·57. The over-crowding which hitherto existed in this jail has been relieved by the transfer of a number of prisoners to Kotah, where ample accommodation has been provided.

192. *Bundi.*—The Bundi Jail has been somewhat improved, but the mortality is still high.

193. No deaths were reported from Shahpura and Dungarpur Jails, and the mortality fell in all jails, except Jaipur, Tonk and Kishangarh, which is satisfactory.

194. Steady progress is being made in jail management in most of the States of Rajputana, and the prisoners are now generally well cared for. The water-supply, the food, and the vegetable gardens of jails are all receiving more attention than hitherto. There is still over-crowding of prisoners in some States, and a few of the old jails are very defective in drainage and construction, and some of the defects require immediate remedy. The defects have been pointed out at the time of inspection.

195. The Administrative Medical Officer in Rajputana inspected the jails at Ajmer, Jaipur, Bharatpur, Dholpur, Alwar, Kotah, Bundi, Jhallawar, Tonk, Bikanir and Udaipur, besides as Residency Surgeon, Western Rajputana States, he inspected the Sirohi and Jaisalmer Jails; the Residency Surgeon, Jaipur, inspected the Kishangarh Jail, and the Residency Surgeon, Mewar, the Partabgarh Jail.

196. More than the usual inspections have been carried out by the Residency Surgeons of Jaipur and Udaipur; and the Agency Surgeons of

Bikaner, Alwar, Kotah and Jhalawar inspected all the dispensaries under them. The Medical Officer on special duty at Bharatpur inspected the dispensaries of that State during the cold weather, and it is hoped the Karaoli, Dholpur, Bundi, Tonk and Shahpura Dispensaries and Jails will now be regularly inspected by the new Agency Surgeons.

QUALIFIED MEDICAL STAFF.

197. There are now 11 Commissioned Medical Officers employed in Rajputana besides the Military Medical Officers, *viz.*, three Residency Surgeons at Jodhpur, Udaipur, and Jaipur, two Civil Surgeons at Ajmer and Bikaner, two Agency Surgeons at Alwar and Kotah, one Agency Surgeon at Bharatpur, who has recently been transferred from special duty to the Eastern States, Rajputana ; one Agency Surgeon, at Deoli, who has recently been transferred from Medical Officer, Deoli Irregular Force, to the Haraoti and Tonk Agency, with the medical charge of the Deoli Irregular Force now as an additional charge. Captains J. W. Grant and J. A. Black, I.M.S., are temporarily employed on plague duty here.

198. The Civil Surgeon, Ajmer, is the Medical Officer of the Merwara Battalion, and the Medical Officer, Abu Sanitarium, is Civil Surgeon, Mount Abu; the Medical Officer of the Mewar Bhil Corps superintends the Civil dispensaries of Kherwara and Kotra, and the Medical Officer, Erinpura Irregular Force, inspects the Sheoganj Dispensary adjacent to the Cantonment of Erinpura.

199. One Captain of the Indian Subordinate Medical Department, one Assistant Surgeon, and three private medical practitioners are employed here temporarily on plague duty.

200. There is one Assistant Surgeon at Beawar in the Ajmer-Merwara District, and nine in Native States, *viz.*, three at Jodhpur, three at Jaipur, one in Bikaner, one at Bharatpur and one at Khetri.

201. There are 24 Hospital Assistants employed by the British Government, *viz.*, 9 in Ajmer-Merwara, 10 in Political Agency and Salt Revenue Dispensaries, 2 in Abu and Abu Road Charitable Dispensaries, and a reserve of three to act for the above from time to time. There are 120 qualified Hospital Assistants lent by Government and employed by Darbars, and a reserve of 13 more to act temporarily for them. There are still 19 Local Class Hospital Assistants employed, *viz.*, 6 in Jaipur, 7 in Bharatpur, 2 in Mewar, 2 in Dholpur, and 2 in Bikaner. Beside these there are 11 Local Class Native Doctors, who were locally entertained by the different States in Rajputana, *viz.*, 6 in Bharatpur, 1 in Mewar, 1 in Marwar, 1 in Bundi, 1 in Dungarpur and 1 in Kushalgarh. It is hoped that these Local Class Native Doctors will shortly be replaced by qualified men from the list.

202. There are 8 Military Hospital Assistants employed with the Imperial Service Troops of Rajputana and 1 Local Class Native Doctor at Alwar.

203. As the medical pupils of the North-Western Provinces and Oudh in the Civil Branch have joined, after passing their final examination, the reserve list of Hospital Assistants is up to the sanctioned strength.

204. Four Lady Doctors are at present employed in Rajputana as in the previous year, and there are 13 Female Hospital Assistants against 11 in 1897.

FEMALE HOSPITALS AND EDUCATION OF WOMEN.

205. *Ajmer.*—Miss Garvie has been Superintendent of the Mission Hospital for Women at Ajmer since January. Much good work has been done during the year both in the hospital and in the houses of the people. The number of patients treated and the other medical work done are shown under Mission Hospitals.

206. *Beawar.*—Female Hospital Assistant Champa Bai has been in charge of the Beawar Dispensary for women throughout the year. There were 7,178 out-patients treated at this dispensary, and 105 patients were visited free at their houses. This Hospital Assistant has done good work in the dispensary and made herself popular in the city.

207. *Jodhpur.*—Miss Adams, M.D., has been in charge of the Jaswant Hospital, Jodhpur, throughout the year, and the returns show a satisfactory increase of work. In this hospital 8,308 in and out-patients were treated and 774 operations performed, of which 25 were extractions of the lens for cataract and 6 obstetric operations. Miss Adams visited many *purdah-nashin* ladies at the Palace and at their own houses in addition to those treated in the hospital.

208. Mrs. Bose, a qualified Hospital Assistant, who was appointed in June 1898, resides in the hospital, and gives valuable assistance. Some of the town *dhais* have received instruction in their special calling during the year.

209. Miss Dissent, M.D., held charge of the Lady Dufferin Hospital at Alwar till the 28th February 1899, when she was relieved by Miss Lauder, M.D., who is now Superintendent of the institution. There were 11,267 in and out-door patients treated and 2,045 operations performed against 11,787 in and out-door patients and 2,504 operations in 1897. Two new wards were opened by His Highness the Maharaja on the 1st April 1898, and these afford much extra accommodations for in-patients. There were 1,886 *purdah* ladies treated in the hospital against 1,571 in 1897, and 2,487 patients were visited at their houses by the hospital staff. Female Hospital Assistants Bala Bai and Sagna Bai and the staff gave valuable assistance to the Lady Doctor. Both these Hospital Assistants passed their examinations for promotion to the second grade at Agra in April last.

210. *Udaipur.*—Miss Graham has been in charge of the Walter Zenana Hospital at Udaipur throughout the year. There has been a considerable decrease in both in and out-door patients, *viz.*, 2,860 against 3,398 in the previous year. This may, to some extent, be attributed to the greater healthiness of the year. There were 69 operations performed against 57 in 1897. A Female Hospital Assistant resides in this hospital and assists in all the duties connected with it.

211. *Tonk.*—Miss DeSouza has been in charge of the Walter Hospital at Tonk throughout the year. There has been a considerable increase in both he number of patients treated and the operations performed, *viz.*, 6,234 and 407 against 3,692 and 223 in 1897. A considerable number of *purdah* ladies were visited at their houses, and Miss DeSouza is of opinion that the strictness of her *purdah* arrangements have materially helped this hospital, which has hitherto been backward. The Administrative Medical Officer quite agrees with Miss DeSouza that all women's hospitals should be kept strictly *purdah*,

and that if men are frequently allowed into them for inspections, or to perform operations, they will not serve the purpose for which they are intended. The Lady Doctors and Hospital Assistants should be able to perform the operations, and where they are not, the Residency and Agency Surgeons should do them in the ordinary hospitals, to which there will be no more objection than to their doing them in the female hospitals. Close *purdah* families will not allow a man to operate under any circumstances, so it is imperative that female practitioners should be able to do their own surgical work.

212. *Bharatpur.*—The female dispensary in Bharatpur city has been in charge of Female Hospital Assistant Bibi Rup Kuwar throughout the year; 9,079 in and out-door patients were treated against 10,079 in the previous year; the decrease is attributed to the less prevalence of malarial fevers during the year. The hospital has lately been removed to a new building, and an increase in attendance is hoped for.

213. *Kotah.*—The Victoria Hospital at Kotah has been in charge of Hospital Assistant Bessie Karimullah throughout the year. She passed her examination for the second class on the 15th April 1898. The total number of in and out-door patients treated in the hospital fell from 8,173 to 7,997, a decrease attributed to the greater healthiness of the season. There were 849 operations performed against 718 in the previous year. It is proposed to place this fine hospital in the hands of a well qualified Superintendent, who should be able to acquire more influence with the people than any Hospital Assistant can be expected to obtain. It is hoped this step will soon be taken, as the present arrangement is very unsatisfactory and detrimental to the institution. The hospital staff is not under proper control, and petitions are frequently sent to the Administrative Medical Officer against the Hospital Assistant in charge.

214. *Bikaner.*—Bibi Asrafi, a qualified Hospital Assistant, has been in charge of the female wing of the Bhagwan Dass Hospital at Bikaner throughout the year. There were 315 female in-patients treated and 644 operations performed against 321 in-patients and 533 operations in 1897. *Purdah-nashin*, and other women who do not wish to go into the male wing of the hospital are treated in this detached building, but no special returns are made out for it. The Female Hospital Assistant is popular and does good work.

215. His Highness the Maharaja proposes to build a fine hospital for women very shortly.

216. *Jaipur.*—A Second Class Female Hospital Assistant has been employed in the Women's Wards of the Mayo Hospital, Jaipur, throughout the year. There has been a decrease in attendance, which has been attributed to the absence of another female Hospital Assistant on plague duty at Bandikui. Endeavours are being made to get a Women's Hospital established at this Capital, where it is much needed. The *purdah* system is more rigid in Jaipur than in many of the other States of Rajputana, where such institutions now attract large numbers of *purdah-nashins*. The *dhai* class was kept up as usual and well attended.

217. *Karaoli.*—The Karaoli Dispensary for women was closed till the 1st of February last, when it was opened by Mrs. Bose, a qualified Hospital Assistant from Calcutta, who promises to do good work there.

218. *Sirohi.*—Mrs. Ives, a qualified nurse, is still employed by the Sirohi Darbar to look after the ladies and children in the Palace, but she has no opportunity of working amongst the town's people.

219. The Jodhpur, Jaipur, and Bikaner Darbars are educating a female pupil each at the Agra Medical School.

IMPERIAL SERVICE TROOPS.

220. The four regiments of Imperial Service Cavalry in Jodhpur, Alwar, and Bharatpur, the Bikaner Camel Corps, the Jaipur Transport Corps, and two regiments of the Imperial Service Infantry at Bharatpur and Alwar have got good well-equipped hospitals, which have been regularly inspected by the Administrative Medical Officer in Rajputana. The recruits of this force have also been inspected from time to time, and found to be of good physique.

221. The Jaipur Transport Corps returned in good health from the North-West Frontier Expedition to Jaipur on the 17th April 1898.

222. Until the 30th January the hospital remained divided, the Assistant Surgeon and the hospital staff worked in camp at Budhni-Peshawar, the Head-quarters of the Transport Corps, and the Hospital Assistant with a dresser at Camp Jamrud. On the 31st January the entire hospital reached Jamrud, where it remained up to the end of the expedition.

TABLE A.

DISEASES.	NEW CASES ADMITTED.			RESULT.			REMARKS.
	January.	February.	March.	Cured.	Died.	Discharged otherwise.	
Dysentery . . .	3	6	3	11	1	...	
Malarial fevers . .	1	2	4	7	...	...	
Rheumatic affections .	1	1	...	2	...	...	
Lungs	5	1	...	5	1	...	
Ulcers	1	1	3	5	...	...	
Local injuries . .	...	3	3	6	...	...	
TOTAL .	11	14	13	36	2	...	

223. The above table shows the diseases of in-door patients treated in the Jaipur Imperial Service Transport Hospital on active service with the Tirah Expeditionary Force for the months of January, February, and March 1898.

224. Dysentery and malarial fevers were the most common diseases, and there were several injuries caused by transport carts and animals.

225. Diseases of the respiratory organs were prevalent owing to extreme severity of the weather.

226. The following table shows the diseases of out-door patients treated in the Jaipur Imperial Service Transport Corps Hospital, on active service with the Tirah Expeditionary Force, during the months of January, February, and March 1898.

TABLE B.

DISEASES.	NEW CASES; MONTHLY ATTENDANCE.				REMARKS.
	January.	February.	March.	Total.	
Dysentery	43	41	26	110	
Malarial fevers	...	...	20	20	
Eye	1	...	...	1	
Ear	...	...	2	2	
All other general	43	19	3	65	
Of nervous system	1	1	3	5	
Lungs	14	15	5	34	
Other respiratory	57	110	48	215

Soft chancre	...		1	1	
All other local diseases	1	...	3	4	
Local injuries	...	4	7	11	
TOTAL	211	220	147	578	

227. The above table shows the ailments suffered from without confinement to bed or going into hospital. Most of these were dysentery, dyspepsia, ulcers and lung and respiratory diseases.

TABLE C.

NAMES.	Ranks.	No. of Troop.	Camp.	REMARKS.
	I.—*Killed.*			
Sardara	Driver	I	Jamrud	Shot by enemy.
	II.—*Wounded.*			
Isra	Driver	V	Jamrud	Stabbed by a soldier sentry, at night.
	III.—*Died.*			
Bahadur	Driver	VIII	Peshawar	Died of pleurisy.
Sadul Singh	"	"	"	Ditto.
Kadar	"	III	Jamrud	Died of dysentery.

228. The above table shows the numbers killed and wounded, and also the deaths from diseases among the Jaipur Imperial Service Transport Corps while employed on active service with the Tirah Expeditionary Force during the months of January, February, and March 1898. This table shows a considerable mortality from disease.

229. Hospital Assistant Nur Masih reached Jaipur with the hospital on the 17th April 1898, and Assistant Surgeon Daljang Singh Khanka was allowed to proceed on leave from Jamrud.

230. A selected Hospital Assistant was posted to the Jodhpur Imperial Service Troops during the year under report.

INSANES.

231. There were 12 lunatics in Ajmer Hospital during the year under report: of these, three who showed no signs of improvement, were transferred to the Lunatic Asylum at Delhi, one was cured, and three were handed over to the safe custody of their relatives, who are, in every case, required to execute a bond for their proper care. Three of the insanes were drug-smokers and one suffered from epilepsy.

232. Lunatics are now kept under observation in jail wards where there is accommodation for six, and these are quite separate from the prisoners' wards. When insanes show no signs of recovery, they are tansferred to the Lunatic Asylum at Delhi. No insane died during the year.

233. In Native States Hospitals and Dispensaries there were 197 insanes treated during the year 1898, of whom 61 were cured, 29 made over to the custody of their relatives, and 7 died.

234. There are comfortable lunatic asylums at Jodhpur, Jaipur, Bikaner, Bharatpur, Alwar, Jaisalmer, Karauli, Kotah and Jhalawar, where insanes receive medical treatment and are fairly cared for.

235. In Jodhpur Lunatic Asylum 20 male and 5 female insanes were treated: of these, 4 recovered and 9 were discharged to the custody of their relatives.

236. There were no insanes admitted to the Jaisalmer Lunatic Asylum.

237. There were 101 insanes in the Jaipur Asylum, 21 of whom were cured, 1 relieved, 18 discharged to the custody of their friends, and 4 died. Kishangarh insanes are sent to the asylum at Jaipur, and a regulated charge paid for their keep.

238. *Bikaner.*—In Bikaner Lunatic Asylum 19 insanes were treated, of whom 9 recovered. Only male insanes are accommodated in it, and females are kept in the female Jail circle; it is, however, proposed to enlarge and improve this asylum as soon as possible.

239. *Bharatpur.*—There were 16 insanes treated in the asylum at Bharatpur, 8 of whom were cured, 2 made over to the custody of their friends, and 1 died. The Hospital Assistant attached to the Jail Hospital attends daily to the medical and sanitary wants of the insanes, and the asylum is in excellent order.

240. *Alwar.*—In Alwar Lunatic Asylum 19 insanes were treated, 11 of whom were cured and handed over to the custody of their relatives, and 1 died. The exciting causes of insanity were chiefly the abuse of ganja, bhang, and charas combined more or less with dissipated habits, or specific disease and epilepsy. A compound is being constructed at the back of the asylum to give the patients freedom and fresh air.

241. *Dholpur.*—There is no lunatic asylum in this State, but two insane patients are under treatment at the hospital.

242. *Kotah.*—There were 8 insanes treated in the lunatic asylum at Kotah, of whom 1 was cured and sent back to his home, and 1 died.

243. *Karaoli.*—In the Karaoli Lunatic Asylum 5 lunatics were treated, all of whom were cured.

244. Two insanes were treated as out-patients in the Shahpura Dispensary during the year under report, both of whom were cured.

245. It is hoped a lunatic asylum will soon be established at Udaipur, Partabgarh, Banswara, Dungarpur, Sirohi, Shahpura, Dholpur, Tonk, Bundi and Kishangarh. The Residency Surgeon, Mewar, reports that it is the intention of His Highness the Maharana of Udaipur to erect a lunatic asylum at Udaipur immediately, for which a site has been selected. A site for a lunatic asylum was long ago selected at Sirohi by the Administrative Medical Officer, but nothing has been done beyond this. It is, however. hoped the Darbar will soon move in the matter.

A. ADAMS, M.D., *Lieut.-Col., I. M. S.,*
Administrative Medical Officer in Rajputana.

DATED ABU;
The 28th June 1899.

TABLE XI.—*Statistics of Charitable Medical Relief in the different States of Rajputana and Ajmer-Merwara during the year 1898.*

Number.	States.	Population, Census 1891.	Area in square miles.	Number of patients treated.	Number of Dispensaries.	Number of Dispensary towns.	One Dispensary.		One Dispensary Town.		Percentage of population treated.	Cost of Med Relief.		Remarks.

FORM No. XI.—*Statement showing the chief sanitary defects in the Municipalities of Ajmer-Merwara District during 1898.*

1	2	3	4	5	6	7
Number.	District.	Name of Municipality.	Populations according to the Census of 1891.	Total death rate per 1,000 of population.	Chief sanitary defects.	Remedial measures adopted.
1	AJMER.	Ajmer Town and Suburbs .	68,843	34·37	Covered drains in Kaisar Gunj and Naya Bazar require to be substituted by saucer drains. Saucer drains are necessary round the hydrants and the platforms require raising and the supply of water from the Foysagar is likely to fail before next rains. Birat system requires improving.	Kaisar Gunj Main Nulla has been paved.
2		Nasirabad Town (cantonment).	21,710	22·57	The drainage of the Bazar collects in pools in the open ground below the Bazar. It is not a very great quantity, however, as there are comparatively few drains. The Conservancy Establishment is insufficient, but the Cantonment Funds cannot spare more money on this account. Private latrines unsatisfactory.	Strict supervision made and every precautions taken during the year.
3		Kekri Town . . .	7,100	38·17	Water supply is deficient.	Metalled roads are being gradually made. Kutcha drains are constructed in the bye-lanes during rains. A well is under construction behind the Municipal garden and the feeder of the Victor's well was improved.
4	MERWARA.	Beawar Town . . .	20,978	28·36	The drains are not cleaned. Two of the city wells only are potable according to the Government analyst. The conservancy is very much neglected.	The Civil Surgeon, Ajmer, inspected the town and found the conservancy arrangements very bad. He reported to the Commissioner who gave the Municipality three months to put things straight.

ANNUAL STATEMENT I.—*Showing particulars of vaccination in Rajputana during the year 1898-99.*

No.	Name of State.	Population of District according to computation of 1891.	Average population per square mile.	Average number of vaccinators employed throughout the season.	Total number of persons vaccinated.			Average number of persons vaccinated by each vaccinator.	PRIMARY VACCINATION.				Re-vaccination.		Percentage of Successful cases.		Persons successfully vaccinated per thousand of population.	Average annual number of persons successfully vaccinated during previous five years.		Average annual number of deaths from small-pox during previous five years.	
										Successful.											
					Males.	Females.	Total.		Total.	Under one year	Over one and under six years.	Total of all ages.	Total.	Successful.	Primary.	Re-vaccination.		Number.	Ratio per thousand.	Number.	Ratio per thousand.

When prisoners of different classes are confined in the same jail, the expenditure on establishment and other items with which all are concerned should be divided over all. The cost per head under any item of expenditure is to be calculated on prisoners actually concerned in it or contributing to it, and not otherwise.

Hospital charges, column 7, should include rations and also the cost of medicines supplied both from the bazar and Medical Store Depôts. In this series (Financial) annas and pies are to be shown where there are columns for them.

STATEMENT XII (FINANCIAL).—*Showing the net Cash earnings of convicts sentenced to labour in the Central Jail at Ajmer during the year 1898.*

1	2	3	4	5	6	7	8	9	10	11	12	13	14
Serial No.	NAME OF JAIL.	Average number sentenced to labour.	Average number employed in Jail manufactures.	Cash balance on manufacturing account in hand on the 1st January 1898.	Cash drawn on manufacturing account during the year.	TOTAL.	Paid into Treasury on manufacturing account.	Cash balance in hand on manufacturing account on the 31st December 1898.	TOTAL.	Cash earnings (being total of column 10 less total of column 7).	Average earnings per head calculated on column 3.	Average earnings per head calculated on column 4.	REMARKS.

No. 5076 G.

FROM

THE AGENT TO THE GOVERNOR-GENERAL,

RAJPUTANA,

To

THE SECRETARY TO THE GOVERNMENT OF INDIA,

FOREIGN DEPARTMENT.

Dated Abu, 10th November 1900.

SIR,

In continuation of the correspondence ending with Foreign Department letter No. 329-I.A., dated the 17th January 1900, I have the honour to forward, in print, a copy of the letter noted in the margin from Lieutenant-Colonel D. ffrench Mullen, M.D., I.M.S., Administrative Medical Officer in Rajputana, submitting his Report for 1899 on Dispensaries, Jails, and Sanitation in Rajputana and Ajmer-Merwara, and on Vaccination for the official year 1899-1900, together with my review of his report.

No. 2186, dated the 14th August 1900.

I have the honour to be,

Sir,

Your most obedient Servant,

W. H. C. WYLLIE,

Offg. Agent to the Governor General, Rajputana.

REVIEW.

Review of the Annual Report on the Sanitation, Dispensaries, and Jails of Rajputana for the year 1899, and on Vaccination for the official year 1899-1900.

Rainfall.

The year was marked by the failure of the preceding monsoon, following on the scanty rainfall of the year before, which gave rise to acute distress over almost all Rajputana. The outturn of the crops was very poor, and prices of food-grains rose abnormally high. A rainfall of only 10 inches was registered at Ajmer, which was less than half the average fall of the previous six years. In Beawar only 5·10 inches of rain fell, as against an average of 22·75 inches. The deficient rainfall not only stopped cultivation, but caused a water famine over a considerable portion of the province. The Foy Sagar, which supplies the city of Ajmer, dried up, and water had to be obtained by pipes from the Budha Pushkar lake, about six miles distant.

	Ajmer. Inches.	Beawar. Inches.
1898 . . .	12·97	12·78
1899 . . .	10·00	5·10
Average fall of six years .	24·49	22·75

In the Western States of Rajputana and in Bikaner no rain fell worth mentioning. Grass and fodder were generally unprocurable, the tanks and wells dried up, and cattle perished in great numbers. A grain famine was only averted by the facilities for imports afforded by the Jodhpur-Bikaner Railway. Relief works on an extensive scale were opened both in the British District of Ajmer-Merwara and in the Native States. The medical arrangements to meet the emergency were carried out under the direction of the Administrative Medical Officer and the Residency and Agency Surgeons. The Subordinate Medical staff were unfortunately wholly insufficient in number to meet the heavy demands made from all quarters. Eleven additional hospitals and one poor-house were opened in the Ajmer-Merwara District. In the Native States 21 hospitals and poor-houses were established, namely, 13 in Marwar, 5 in Bikaner, 2 in Kotah, and 1 in Jaipur. The in- and out-door patients treated in these institutions numbered 5,740 and 85,206 respectively.

Vital Statistics.

As was only to be expected in the abnormal conditions which prevailed, the year under review has been unhealthy and marked by small-pox, cholera, fevers, diarrhœa, and dysentery. The recorded birth-rate per thousand of population in Ajmer-Merwara increased from 29·73 in the previous year to 31·40 in 1899, and the death-rate from 22·13 to 33·21. In Ajmer the birth-rate was 29·39, while in Merwara it was 38·48. The great difference between the figures for the two districts indicates that the registration is susceptible of much improvement, especially in the Ajmer District, where there are a number of Istimrari Estates, in which no proper check is exercised over the registration. The attention of the Commissioner has been drawn to the subject. The high rate of mortality is attributed by the Administrative Medical Officer to deaths amongst immigrants from the neighbouring Native States. Although the ratio of mortality from fevers was less than in the previous year, being 70·53 per cent. of the total number of deaths against 72·37, nevertheless the total number of deaths from this source shows an increase of 4,016 over the figures for the

preceding year. The deaths from small-pox increased from 409 in 1898 to 962 in 1899, and those from dysentery and diarrhœa from 549 to 1,159. The deaths among children under five years of age was 48 per cent. of the total mortality, against 47 per cent. in the previous year.

The number of States which furnish statistics remains the same as last year, *viz.*, 18. The figures furnished, though still far from accurate, indicate in some instances more careful compilation than in previous years. The average birth-rate recorded was 15·78, and the average death-rate 14·02 per thousand of population. The variations, however, between the figures of the different States are so large that no useful conclusions can be drawn regarding the health of the people.

Cholera.

Ajmer-Merwara was practically free from cholera during the year under report, only one death being recorded. The disease was, however, prevalent in the Native States, where there were 816 cases and 497 deaths, as compared with 20 deaths in the previous year. It appeared in an epidemic form in the months of November and December 1899, being introduced, it is believed, from Hissar. In table 7 only one death from cholera in the Native States is shown, while in table 8 the deaths from the same cause are given as 497. A similar discrepancy was observed in the previous year's report, which the Administrative Medical Officer explained was due to the fact that the only cholera cases and deaths entered in table 8 are those reported by Medical Officers and their staffs, whereas in table 7 the cases reported by the Conservancy Staff of the Agencies appointed for collecting vital statistics are given.

Sanitation.

The sanitary and conservancy arrangements at Ajmer continue to work satisfactorily. Owing to two successive years of deficient rainfall, the Foy Sagar tank, on which Ajmer usually depends for its water-supply, dried up, and water had to be brought from the Budha Pushkar lake. Efforts are being made to improve the sanitation of the town of Beawar. New conservancy carts have been obtained, and the conservancy staff has been strengthened. The sanitary arrangements in Jaipur, Jodhpur, Bharatpur, Kotah, Bikaner, Alwar, and Karauli continue to improve. More attention is being paid to the protection of the various sources of water-supply, and to the general cleanliness of the larger cities and towns.

Vaccination.

The results under this head show steady progress. In the Ajmer Division the number of primary vaccinations rose from 17,816 in 1898-99 to 26,077, and that of re-vaccinations from 132 in the preceding year to 1,003 in the year under review. The increase in both classes is said to be due partly to the opening of famine works and partly to the prevalence of small-pox in epidemic form in the district and amongst immigrants. The percentage of successful cases in primary and re-vaccination is given as 99·08 and 90·83, against 98·46 and 65·15 respectively in the year 1898-99. During the year under review 49·32 per mille of the population were vaccinated, as against 32·50 in 1898-99. Although there is an increase in the figures, the Administrative Medical Officer considers that the statistics show room for much improvement.

The average number of persons vaccinated by each vaccinator rose from 1,380 to 2,083, while the cost of each successful operation fell from 24 to 16 pies. The total expenditure, however, increased from R2,184-13-9 in 1898-99 to R2,276-7-6 in 1899-1900.

In Native States there was also an increase in the number of primary vaccinations, which rose from 334,374 in 1898-99 to 349,476 in 1899-1900. Of these, 98·56 per cent. were successful, as against 99·27 in the preceding year. The average number of persons vaccinated by each vaccinator rose from 1,387 to 1,551, and the average cost of each successful case fell from 18 to 17 pies.

The total expenditure amounted to R31,172-7-11 against R31,715-1-9 in 1898-99. The largest number of vaccinations was performed, as in previous years, in Jaipur and Marwar. The inspection of vaccination work during the year received vigilant attention from the various Agency Medical Officers.

Dispensaries.

At the close of the year under review there were 165 medical institutions open in Rajputana, as against 157 at the end of the previous year. Seven new dispensaries were established, namely, 5 in Kotah, 1 in Marwar, and 1 in Dholpur, and the female dispensary in the city of Karauli was re-opened. In addition to the medical institutions kept up by the Native States, there are 6 mission and 6 railway hospitals. Several improvements have been effected in the Mayo Hospital at Jaipur, and three separate eye wards have been added to the hospital at Alwar. The female wing attached to the Victoria Hospital in Bharatpur was opened for the reception of patients, and many reforms have been carried out in other hospitals and dispensaries.

The number of in- and out-door patients treated in Ajmer-Merwara rose from 712 and 53,756 in 1898 99 to 1,316 and 56,412, respectively, in 1899-1900. The rise in the number of patients of both classes is attributed to the influx of poor people from the neighbouring States caused by the famine. In the different Agency and Salt Department dispensaries the attendance of in-door patients fell from 604 in 1898 to 508 in 1899, while the number of out-door patients rose from 23,111 to 23,304. In the hospitals and dispensaries of Native States, 17,328 in-door and 999,263 out-door patients were treated, as against 14,374 and 922,951, respectively, in the preceding year. The increase is attributed partly to the opening of new institutions and partly to increased illness.

In the six mission hospitals at Ajmer, Nasirabad, Udaipur, Jodhpur, and Jaipur, the number of new in and out patients treated was 902 and 55,363 against 713 and 49,768, respectively, in the previous year.

The number of in- and out-door patients treated in the six railway hospitals was 43,873 as against 41,362 in the previous year; 442 surgical operations were performed in these hospitals.

By far the larger number of patients in all the dispensaries and hospitals were, as usual, admitted on account of malarial and spleen diseases, but the greatest mortality was due to diarrhœa and dysentery. In the Ajmer Division and in Native States, the percentage of deaths from diarrhœa and dysentery to the total mortality amounted to 38 and 25 respectively. In the Agency hospitals and Salt Department dispensaries diseases of the lungs and respiratory organs and diarrhœa and dysentery accounted for no less than 86 per cent. of the total deaths.

There were 625 cases of leprosy treated during the year, as against 638 in 1894. This disease shows a steady decrease.

Surgical operations.

The number of surgical operations rose from 64,489 in 1898 to 65,410 in the year under review. Of these, 3,197 operations were performed in the Ajmer Division, and 62,213 in Native States, the figures for the previous year being 3,019 and 61,470, respectively. The largest number of operations were performed, as in the previous year, by the late Lieutenant Colonel A. Adams, I.M.S., Residency Surgeon, Western Rajputana States, and Administrative Medical Officer for Rajputana, and by Major P. D. Pank, I.M.S., Residency Surgeon, Jaipur. The number of operations performed by each during the year was 694 and 615 respectively. Satisfactory progress has been made in surgery in most of the Native States.

The sale of quinine at post offices was continued during the year. It was sold at 91 as against 135 post offices in the previous year. The number of packets sold was 164 containing 16,524 doses, as compared with 33,150 doses in 1898. The cause of the large decrease in the sale is attributed to the decrease in malaria during part of the year owing to the dryness of the season. This last reason is, however, inconsistent with the large number of deaths reported as due to fevers.

Expenditure.

The cost of the maintenance of hospitals and dispensaries in Ajmer-Merwara amounted to R11,882 against R11,040 in 1898. The expenditure on Agency hospitals and Salt Department dispensaries rose from R10,307 in 1898 to R10,635 in 1899, and in Native States from R2,84,128 to R3,02,217. The increased charges were due chiefly to famine. By far the largest expenditure was incurred in the States of Jaipur and Jodhpur.

Bubonic plague.

No case of indigenous bubonic plague occurred in Rajputana during the year 1899. Six indigenous cases of suspected plague were reported from the village of Gandhar in the Pertabgarh State, of which three proved fatal. A bacteriological examination of the serum at the Laboratory in Bombay proved, however, that the disease was not true bubonic plague. The measures adopted by the Residency Surgeon, Mewar, to suppress the outbreak were successful, and the disease, which was confined to one village (the inhabitants of which had not been in contact with any person from an infected area), speedily disappeared. Twenty-two cases of plague, real or suspected, were detected at the railway stations, of which 19 proved fatal.

Jails.

In consequence of the famine, crime increased during the year under review. The daily average number of prisoners in the Jail at Ajmer rose from 287·74 in 1898 to 371·70 in 1899. The admissions into hospital increased from 75 to 94, and the daily average of sick from 4·41 to 6·24. The actual number of deaths was 5, as against 4 in the previous year, but the ratio fell from 13·90 per thousand to 13·45.

In the twenty jails in Native States from which returns have been received, the daily average number of prisoners rose from 4,679·58 in 1898 to 5,194·51 in 1899, but the admissions into hospital fell from 3,636 to 3,486. The daily average of sick, however, rose from 112·32 to 116·25, and the death-rate from 19·23 to 29·84 per thousand prisoners. Nineteen per cent. of the admissions and 35 per cent. of the deaths were due to dysentery and diarrhœa.

The mortality in the jail at Jodhpur exhibited a large rise over that of the previous year. This was chiefly due to an outbreak of diarrhœa caused by the bad water-supply of the jail. The death-rate in the jail at Banswara continues to be high. The increased mortality in the jails is attributed partly to overcrowding and partly to the weak state of health of many of the prisoners on admission. The construction of new jails in Banswara and Pertabgarh on healthy sites is under contemplation, and is a much-needed reform. In spite of the overcrowding in the jails, the condition of prisoners in Native States compares favourably with that in former times, the high death-rate of the present year being almost entirely due to abnormal conditions consequent on the failure of the monsoon.

Female hospitals and medical education of women.

Miss Campbell, who is in charge of the Mission Hospital for women at Ajmer, has done much useful work among the women, both in the hospital and at their own houses. The dispensary at Beawar was in charge of Female Hospital Assistant Champa Bai (who, it is to be regretted, has since died of cholera) throughout the year, during which time 7,908 out-patients were treated at the dispensary, and 129 patients were visited free at their houses. This Hospital Assistant was capable and painstaking, and had made herself generally popular.

Miss Adams remained in charge of the Jaswant Hospital for women at Jodhpur. In all 9,603 patients were treated at this hospital and 620 operations performed. Miss Adams also visited several purda-nashin ladies at their houses. Miss Lauder has been in charge of the Dufferin Hospital at Alwar, where there was an increase in the number of in-patients. Many purda nashin ladies were visited at their homes. Miss Graham and Miss deSouza continue to hold charge of the Walter Zenana Hospitals at Udaipur and Tank respectively. The female hospital at Bharatpur remained under the charge of Bibi Rup Kuar, and the female wing of the Bhagwan Dass Hospital in Bikaner under that of Female Hospital Assistant Bibi Ashrafi. His Highness the Maharaja intends building a new female hospital in Bikaner. Hospital Assistant Bessie Karimullah held charge of the Victoria Hospital at Kotah, and is well reported on. A qualified Female Hospital Assistant has been employed in the female wards of the Mayo Hospital at Jaipur, whilst a movement is on foot to establish a female hospital in that city. The female dispensary at Karauli, which was re-opened on 1st February 1899, is superintended by Mrs. Samuel.

Inspection.

The late Lieutenant-Colonel A. Adams, I.M.S., held charge of the office of the Administrative Medical Officer in Rajputana, in addition to his duties of Residency Surgeon, Western Rajputana States, throughout the year. He inspected all the jails and medical institutions at the head-quarters of the different Political Agencies. He also frequently inspected the plague preventive arrangements, the famine relief camps, and poor-houses in various parts of the province.

The death of Colonel Archibald Adams from cholera, contracted in the course of his official duties, on the 20th May 1900, has deprived the province of a most valuable medical officer.

Colonel Adams had served in Rajputana for 21 years, and had gained the esteem and affection of all classes.

No. 2186.

FROM

THE ADMINISTRATIVE MEDICAL OFFICER
IN RAJPUTANA,

TO

THE FIRST ASSISTANT AGENT TO THE
GOVERNOR-GENERAL FOR RAJPUTANA,
MOUNT ABU.

Dated Ajmer, 14th August 1900.

SIR,

I HAVE the honour to submit the Annual Report on Sanitation, Dispensaries, and Jails in Rajputana for the year 1899, and on Vaccination for the official year 1899-1900.

Mortuary Statements I to XI.
Vaccination Statements I to V.
Comparative Statement of Small-pox and Vaccination.
Dispensary Statements I, II, III, III-A.
Supplement III-A, IV, V, Parts I and II.
Jail Statements III, IX, XII, and XIV.

2. The statements noted in the margin are appended.

3. A cholera map will follow.

I have the honour to be,
SIR,
Your most obedient Servant,

D. FF. MULLEN, *M.D.*,
Lieut.-Col., I.M.S.,
Administrative Medical Officer in Rajputana.

REPORT

ON

THE ADMINISTRATION OF RAJPUTANA

(SANITARY, VACCINATION, DISPENSARY AND JAIL)

FOR

1899.

SECTION I.—SANITATION AND VACCINATION.

METEOROLOGY AND ITS RELATION TO FOOD-SUPPLY.

TABLE 1.—*Rainfall of Ajmer and Beawar.*

YEAR.	Place.	INCHES.			
		January to May.	June to September.	October to December.	TOTAL.
1899	Ajmer	1·16	8·84	...	10·00
Average of previous six years .		1·15	22·10	1·24	24·49
1899	Beawar	0·17	4·93	...	5·10
Average of previous six years .		1·34	20·14	1·27	22·75

The above table shows the rainfall of Ajmer and Beawar for 1899 and the average for previous six years.

2. During the year under report only 10 inches of rain were registered in Ajmer, a deficiency of over 14 inches on the average rainfall of the last six years. Last year there was a similar deficiency of 11 inches, so that Ajmer only got one year's supply in two years.

3. In Beawar it was 17·65 inches below the average for the same period and 7·68 less than in 1898.

4. On account of the scanty rainfall for two successive years, the Foy Sagar, which supplies Ajmer city with water, dried up altogether, but owing to the prompt action of the Railway authorities, pipes were laid on to the Budha Pushkar Lake and pumping plant laid down in time to prevent the city from having to endure the discomforts of a water famine. The water of both these lakes has been condemned by the Chemical Examiner, but it is excellent nevertheless.

5. In most of the States of Rajputana the rainfall was very scanty. In the Western States of Rajputana and in Bikaner the almost total failure of the monsoon produced famine all over the States. Water is very scarce throughout Marwar, Jaisalmer and Sirohi, and in many places it is so brackish that it is unfit for human consumption, and the villagers have left their homes in consequence. The Marwar Darbar has arranged to bring water collected from the different wells at Mandaur by steam pump daily into the Gulab Sagar tank in

the city of Jodhpur for the use of the people. This has greatly relieved the distress. In Jaipur 11·44 inches were registered, *viz.*, 13·39 inches less than the average fall. In Alwar State the rainfall varied from 17·74 inches in the Thana Ghazi Tehsil to 6 6 in Behror. At the capital 16 inches were registered, nearly 2·80 inches less than last year, and 14·80 less than the rainfall of 1897. In Udaipur 9·92 inches were registered against 17·86 in the previous year.

6. In most of the States there were no late rains, which, together with the total failure of the winter rains, produced famine in all the States. Marwar, Bikaner, Bundi, Jaisalmer, Sirohi, and Udaipur suffered the most.

7. The tanks throughout the country are nearly all dry and the wells unusually low and brackish, so good drinking water is in most places unprocurable. In the Western States of Rajputana and Bikaner scarcity of fodder and grass prevailed owing to the failure of rain.

TABLE 2.

YEAR.	RAINFALL IN INCHES.		AVERAGE PRICE OF BARLEY AT AJMER AND BEAWAR PER RUPEE.				DEATH-RATE PER THOUSAND OF POPULATION.	
	Ajmer.	Beawar.	Ajmer.		Beawar.		Ajmer.	Beawar.
			Seers.	Chks.	Seers.	Chks.		
1895 . .	24·43	15·26	21	9	23	15	25·81	30·94
1896 . .	26·46	24·51	14	9	15	5	28·53	27·24
1897 . .	23·29	22·26	12	7	13	3	24·28	26·08
1898 . .	12·97	12·78	18	3½	20	4	22·07	22·37
1899 . .	10·00	5·10	15	0	16	9¼	30·81	41·68

8. The above table shows that the price of barley was above the average in both Ajmer and Beawar, and also that the death-rate was above the average of the previous five years. This was due to the scarcity of food and fodder, on account of which a large number of emigrants came into the district generally in a moribund condition.

VITAL STATISTICS.

TABLE 3.—*Birth-rate of population of the Ajmer Division.*

STATEMENT I.

YEAR.	POPULATION.			BIRTHS REGISTERED.			BIRTHS TO 1,000 LIVING.		
	Male.	Female.	Total.	Male.	Female	Total.	Male.	Female.	Total.
1897 . .	288,325	254,033	542,358	9,669	8,602	18,271	17·83	15·86	33·69
1898 . .	288,325	254,033	542,358	8,573	7,549	16,122	15·81	13·92	29·73
1899 . .	288,325	254,033	542,358	9,200	7,832	17,032	16 96	14·44	31·40

9. There were 17,032 births registered in Ajmer-Merwara in 1899 against 16,122 in 1898 and 18,271 in 1896. Of the total births registered, 9,200 were males and 7,832 females and the birth-rate per mille was 31·40 against 29·73 in the previous year and 33·69 in 1897. The birth-rate exceeded the death-rtae in 13 out of 23 registration circles. The registration of births and deaths is still unsatisfactory, as there is no means of checking the registration in Istamrari villages. The Commissioner has been addressed on the subject.

TABLE 4.—*Death-rate of population in Ajmer-Merwara.*
STATEMENTS II TO X.

YEAR.	DEATH RATE PER THOUSAND OF POPULATION PER ANNUM.														PERCENTAGE AMONG TOTAL DEATHS.									
		SEX.		SEASON.					CAUSES.						AGE.									
				Quarters of the year.																				
	Total.	Male.	Female.	First.	Second.	Third.	Fourth.	Cholera.	Small-pox.	Fevers.	Dysentery and diarrhœa.	Injuries.	All others.	Under 1 year.	1 and under 5.	5 and under 10.	10 and under 15.	15 and under 20.	20 and under 30.	30 and under 40.	40 and under 50.	50 and under 60.	60 and upwards.
1897 .	24·68	24·04	25·41	18·12	20·84	25·28	34·44	·04	·29	20·07	·81	·47	3·00	31	18	3	3	3	7	7	8	10	10
1898 .	22·13	22·34	21·91	26·80	21·24	19·32	21·16	0·01	·75	16·02	1·01	·51	3·83	28	19	3	2	3	7	7	9	10	12
1899 .	33·21	34·50	31·75	34·52	28·88	26·94	42·60	·00	1·77	23·42	2·14	·54	5·34	26	21	4	2	3	7	7	8	9	12

10. The above table shows the death-rate according to sexes, seasons, causes and age in Ajmer-Merwara.

11. There were 18,013 deaths registered during the year against 12,005 in 1898, an increase of 6,008, which is attributed to the large number of immigrants from the adjacent States, *viz.*, Marwar and Mewar, into the district on account of famine. The total death-rate rose from 22·13 to 33·21 per 1,000 of population. The highest mortality was recorded in the fourth and the lowest in the third quarter of the year. The death-rate for 1899-1900 is of little use for statistical purposes as there is no means of discriminating between the deaths among famine immigrants and the inhabitants of Ajmer-Merwara, who were employed on the famine relief works.

12. There was only one death recorded from cholera in Ajmer-Merwara, but there was a considerable increase in the mortality from small-pox, which caused 1·77 in 1899 against ·75 deaths per mille in 1898 and ·29 in 1897. A large part of the mortality from small-pox occurred amongst famine immigrants from Native States.

13. The deaths amongst males and females were almost equal, and the death-rate among Hindus was lower than among Mahomedans, *viz.*, 32·87 per mille against 35·40.

14. The mortality among children under five years of age was 1 per cent. higher than in the previous year, *viz.*, 48 against 47 per cent. of the total deaths recorded, which was due to increased mortality from small-pox among young children in this division.

15. The deaths registered exceeded the births in 10 out of the 23 circles against 5 in the previous year, and the total death-rate was in excess over births by 1·81 per one thousand of population in the Ajmer-Merwara District.

16. The Civil Surgeon, Ajmer, has been appointed Health Officer in Ajmer-Merwara and the Staff Surgeon, Nasirabad; the Agency Surgeon, Harauti and Tonk at Deoli, the Assistant Surgeon, Beawar; and the Hospital Assistants at Kekri, Ajmer, Deolia, Ramsad, Pisangan, and Todgarh as Assistant Health Officers, within the Municipal limits of their respective stations.

TABLE 5.—*Deaths according to Diseases in the Ajmer Division.*
STATEMENT VI.

Year.	Cholera.	Small-pox.	Fevers.	Dysentery and diarrhœa.	Injuries.	All others.	TOTAL.
1897	19	158	10,883	439	256	1,630	13,385
1898	1	409	8,669	549	278	2,079	12,005
1899	1	962	12,705	1,159	292	2,894	18,013

17. This table shows the deaths according to diseases in Ajmer-Merwara.

18. There was a considerable increase in the number of deaths from all causes as compared with the previous year; the total increase was 6,008.

19. Small-pox was epidemic throughout Ajmer-Merwara during 1899. There were 962 deaths registered from this disease during the year under report against 409 in 1898 and 158 in 1897; of these 556 occurred in the Ajmer District and 406 in Merwara. It was most fatal in December, when 224 deaths were reported.

20. Out of the total mortality from this disease, 234 were amongst children under 1 year and 643 among those under 10 years of age.

21. The deaths from fevers registered were 4,016 more than in 1898; only 1 death occurred from cholera as in the previous year. The mortality from dysentery and diarrhœa rose from 549 to 1,159 in 1899; this increase is attributed to famine and scarcity.

22. Out of 292 deaths from injuries, 14 were caused by suicide, 228 by wounds and accidents and 50 by snake-bite or killed by wild beasts.

TABLE 6.—*Quarterly deaths from Cholera and Small-pox in the Ajmer Division.*

STATEMENTS VII AND VIII.

	Quarters of the year.				Total.
	First.	Second.	Third.	Fourth.	
Cholera	...	1	...	...	1
Small-pox	273	379	40	270	962

23. The above table shows the quarterly deaths from cholera and small-pox in the Ajmer Division.

24. There was only one death from cholera reported in this Division during the second quarter of the year.

25. Small-pox was epidemic in Ajmer-Merwara during the first, second and fourth quarters, and there were some deaths in the third quarter of the year.

TABLE 7.—*Births and Deaths in Native States.*

Name.	Population according to Census of 1891.	Births.				Deaths.

NOTE The information required for this table cannot be obtained in full from Jaisalmer. The total, therefore, of column 15 does not agree with the totals of the seven preceding columns.

26. The above table shows the registration of births and deaths in the Native States of Rajputana. Registration has been attempted in 18 States, but with scant success.

27. Some of the tables show an improvement on those of previous years, but they are still far from accurate. Arrangements are now being made to improve the agencies for collecting these statistics, which will, it is hoped, be followed by good results in the immediate future. It must not, however, be lost sight of that both time and the spread of education are required to overcome the deeply-rooted prejudices of many of the people of Rajputana in regard to registration.

28. The birth-rate in cities ranged from 8·07 per mille of population in Jhalawar to 53·15 in Jodhpur, and in rural circles from 2·74 per thousand of population in Sirohi State to 23·72 in Mewar. The death-rate varied from 10·94 per mille of population in Patan City to 63·31 in Kotah city, and in rural circles from 2·60 per mille in Sirohi State to 41·48 in Mewar.

29. The average birth-rate registered was 15·78 per mille of population and the average death-rate 14·02. The male births registered exceeded the female by 4,634, and the births exceeded the deaths by 5,965.

30. Small-pox prevailed in 14 out of 18 Native States from which returns have been received. There were 2,061 deaths reported from this disease as against 590 in the previous year.

31. There has been a considerable increase in deaths from fevers and also from dysentery and diarrhœa in the States of Rajputana during the year under report, *viz.*, 28,272 and 4,114 against 26,243 and 3,398 in 1898. Deaths from snake-bite fell from 142 in 1898 to 129 in 1899.

TABLE 8.—*Number of cholera cases reported in Ajmer-Merwara and in Native States during the year 1899.*

NAME.	MAY.		JUNE.		NOVEMBER.		DECEMBER.		TOTAL.		Percentage of deaths to cases.

Marwar (State) . .	...	...	...	...	...	...	314	208	314	208	66·24
Jaisalmer (State) . .	...	...	...	...	...	...	190	100	190	100	52·63
TOTAL .	3	1	1	...	68	56	774	440	846	497	58·75
GRAND TOTAL .	3	1	4	1	68	56	774	440	849	498	58·65

32. The above table shows the cases and deaths from cholera reported in Ajmer-Merwara and in Native States during 1899.

33. There were only 3 cases of cholera reported from Ajmer-Merwara during the year, of which 1 proved fatal against none in the previous year.

34. From 5 Native States 846 cases of cholera and 497 deaths from this malady were reported in 1899 against 6 cases and 6 deaths in the previous year.

35. Cholera broke out in Bharatpur at the end of May; only 4 cases and 1 death occurred. It totally disappeared from the Province till the end of October. It re-appeared, in November in Jaipur, where 68 cases and 56 deaths

were recorded in that month, and 72 cases and 32 deaths in December. The disease extended into Bikaner, Marwar, and Jaisalmer, and it still continues in these States. The disease was reported to have come from Hissar, where many people were on famine relief. Bikaner, Marwar and Jaisalmer suffered most.

36. Disinfection of wells with permanganate of potash, lime and alum was regularly carried out, and every possible sanitary precaution taken to prevent the spread of the epidemic and cut short outbreaks wherever they occurred.

37. A cholera map is attached to the report, which shows the districts where outbreaks occurred and the positions of dispensary towns throughout the province.

SANITATION.

38. *Ajmer Division*—

Population . . .	41,416	Suburbs . . .	27,427
Birth-rate . . .	27·86	„ . . .	28·62
Death-rate . . .	57·10	„ . . .	54·47

The Foy Sagar has, on account of deficient rainfall for two successive years, failed to supply drinking water to the people of the city and suburbs of Ajmer, and consequently the water of the Budha Pushkar Lake has been brought by pipes into the city. The Ana Sagar Lake is completely dried up.

39. The sanitary tramway continues to be worked satisfactorily at Ajmer, and the trenching ground is well looked after. The conservancy carts are under repair and being renewed, but the Municipality is in a very impoverished condition. The latrines connected with huts on the Nasirabad Road and several private privies in the city have been improved. Several under-ground cess-pools have been removed. The huts for a plague segregation camp near the railway station are kept in good order.

40. *Beawar*—

Population	20,978
Birth-rate	44·81
Death-rate	54·68

On account of failure of the monsoon, scarcity of water prevails at Beawar.

41. The Municipal Committee continues to supervise sanitation in Beawar. Iron carts have been procured for the removal of waste water and night-soil.

42. The old open wooden carts are now used for carrying away the dry rubbish and street sweepings. The number of supervising staff and sweepers has been increased.

43. The Civil Surgeon, Ajmer, has been appointed Health Officer in Ajmer-Merwara and the Staff Surgeon at Nasirabad; the Agency Surgeon, Haraoti and Tonk at Deoli, the Assistant Surgeon at Beawar; and Hospital Assistants at Ajmer, Deolia, Kekri, Pisangan, Ramsar, and Todgarh as Assistant Health Officers in the Municipal limits of their respective stations.

44. *Mount Abu and Abu Road.*—The sanitary arrangements of Mount Abu are carefully supervised by the Magistrate and the Local Municipal and Sanitary Committee, and by the Residency Surgeon, Western Rajputana States. Particular attention is given to drinking water, conservancy, drainage, and the prevention of overcrowding in the bazaar, to which there is always a great tendency in the summer season.

45. The town of Kharari at Abu Road has been much improved by the new drainage system and conservancy arrangements, which are well superintended by the Hospital Assistant attached to the Charitable Dispensary there.

46. *Jodhpur*—

Population	61,849
Birth-rate	53·15
Death-rate	38·19

Owing to the total failure of rains during the year under report, there is a scarcity of water in the city of Jodhpur. The tanks are all dried up, and all the wells are low. Arrangements have been made for a supply of drinking water through pipes from Mandaur into the Gulab Sagar tank. The Shrimali Brahmins refuse to drink this water, and they continue to draw water from wells, many of which are very brackish and unwholesome.

47. The sanitary steam tramway has worked satisfactorily at Jodhpur, and done much to improve the sanitary condition of both the city and suburbs.

48. The Darbar grant of ₹2,000 a month is continued to the Municipal Committee for the sanitation of Jodhpur city and ₹100 for the conservancy of the town of Pali. In several other Marwar towns the wealthy contribute to a Sanitary Fund, and efforts are being put forth to make this custom general throughout the important towns in Marwar. The Residency Surgeon continues to preside over the Municipal Committee of Jodhpur.

49. An Hospital Assistant has charge of the Sanitary Department in Marwar, and village sanitation is receiving some attention.

50. *Sirohi*—

Population	6,207
Birth-rate	11·60
Death-rate	14·98

There is scarcity of water in the city of Sirohi as well as in most part of the State, and more attention is being paid to sanitation of that State than hitherto. Village sanitation is still, however, very backward.

51. *Jaisalmer*—

Population	10,509
Birth-rate	35·02
Death-rate	43·96

On account of failure of rains during the year under report, the scarcity of water is much felt throughout the country. The conservancy system of the Jaisalmer city has been much improved, but village sanitation is still very backward.

52. *Jaipur*—

Population	158,905
Birth-rate	32·09
Death-rate	39·59

The water-supply is sufficient and good, but owing to light rainfall, the wells are very low. The latrine system has been improved during the year, and the conservancy system is working satisfactorily. The manufacturers of leather vessels (Kuppa) and of leather cord (Tant) from the intestines of animals are not allowed to work inside the city. There are four furnaces for the burning of rubbish in the capital, and four more have newly been constructed, and many other improvements in sanitation have been carried out there during the year.

53. The Superintending Engineer gives much attention to sanitary measures in Jaipur, and this has done much to bring about the great advance which has taken place there.

54. *Udaipur*—

Population	46,693
Birth-rate	27·09
Death-rate	37·31

The water-supply of Udaipur city from tanks and wells is abundant, but not of the best quality.

55. The sanitary arrangements are in the hands of the Police; they are defective in comparison with other large States. A large staff of public sweepers and buffaloes is required. The tanneries are still within the city walls. Village sanitation does not receive much attention, but some of the large towns are regularly cleaned.

56. *Bikaner*—

Population	56,252
Birth-rate	35·16
Death-rate	29·65

The water-supply of Bikaner city is from deep wells, which are not affected by rainfall, and never fail even in the driest season. The sanitation of the city is supervised by the Civil Surgeon and the Municipal Committee, and it receives much attention from them. Village sanitation is receiving some attention, but it is still backward.

57. *Bharatpur*—

Population	68,033
Birth-rate	32·35
Death-rate	32·54

The water-supply of Bharatpur city is from wells, but it is of inferior quality, and its improvement is under consideration. The drainage has been much improved, although the site of the town is low-lying. The sanitary condition of the town has been very much improved; there is a sanitary board, presided over by the Agency Surgeon, which efficiently supervises all sanitary matters. Village sanitation is still backward.

58. *Alwar*—

Population	52,398
Birth-rate	35·10
Death-rate	35·57

The water-supply is from wells; it is sufficient and fairly good. There is a good conservancy system in force under the Municipal Committee, which is presided over by the Agency Surgeon. The drainage of the city is good. Insanitary trades are still carried on within the city walls.

59. Village sanitation in that State is making good progress, and the protection of the water-supply of all villages is supervised by the Agency Surgeon throughout the State.

60. *Karauli*—

Population	23,124
Birth-rate	31·09
Death-rate	22·14

The water-supply of Karauli is sufficient and good from wells. The city is clean and well drained. The sanitary arrangement in the capital is looked after by the Municipal Committee, which takes much interest in it. Village sanitation requires attention.

61. *Dholpur*—

Population	9,744
Birth-rate	17·55
Death-rate	15·29

The water-supply of Dholpur is sufficient and of fair quality. The sanitary arrangements are in the hands of the Kotwal; it is primitive at the capital, and little attention is given to it. Village sanitation is very backward.

62. *Kotah*—

Population	38,624
Birth-rate	40·78
Death-rate	66·31

The scheme for a water-supply from the Chambal river by pipes is still under consideration. The suggestion made by the Agency Surgeon for the erection of a Silchar cinerator for the disposal of the city refuse has not yet been sanctioned by the Darbar. The sanitary condition of the town is carefully supervised by a Municipal Committee, but village sanitation requires more attention. There are no regular drains in the city.

63. *Jhalrapatan*—

	Old.	New.
Population	10,783	23,881
Birth-rate	8·07	12·66
Death-rate	10·94	12·45

The water-supply is sufficient from wells and tanks, but not of good quality in either town. The conservancy system of the Chaoni is good. Village sanitation requires more attention, and the Chaoni Tank should be protected against the waste water of the streets.

64. *Kishangarh*—

Population	15,363
Birth-rate	30·27
Death-rate	31·83

The water-supply is sufficient and of fair quality, and the natural drainage is fairly good. The conservancy arrangements are under the Municipal Committee. Carts should be introduced instead of pack carriage. Village sanitation has not yet received much attention.

65. *Tonk*—

Population	46,069
Birth-rate	14·63
Death-rate	14·80

The water-supply of Tonk is from wells, and there is a river a short distance from the town, where abundance of water can be obtained. The conservancy arrangements are under a Municipal Committee, but not properly supervised. Insanitary trades are still carried on in the town. Carts should be introduced instead of the present system of carriage of refuse on the backs of animals. Village sanitation should be taken in hand.

66. *Shahpura*—

Population	11,718
Birth-rate	40·36
Death-rate	37·38

Water is obtained from wells; it is neither sufficient nor of good quality. A proper conservancy system under a responsible officer is much needed. Village sanitation has not yet been taken up.

67. *Bundi*—

Population	22,544
Birth-rate	12·60
Death-rate	15·39

There is scarcity of water in Bundi city. The conservancy arrangements are under a Munsarim, and they are primitive. The natural drainage is fairly good, but sanitation is backward both at the capital and in villages.

68. *Pertabgarh*—

Population	14,819
Birth-rate	24·97
Death-rate	37·72

The water-supply of Pertabgarh is from wells and tanks; it is sufficient and fairly good. The sanitary arrangements are under the Municipality, but not properly supervised. The town is fairly clean and well drained. Village sanitation has hardly been thought of.

69. *Banswara*—

Population	8,234
Birth-rate	19·31
Death-rate	18·82

The water-supply of this town is from wells; it is deficient, but of good quality. The sanitary arrangements are under a Darogha, and they are primitive.

70. *Dungarpur*—

Population	6,000
Birth-rate	...
Death-rate	...

The water-supply of Dungarpur is from wells and tanks; it is deficient and of fair quality. The conservancy arrangements are under the Municipal Committee, but the staff is too small for the requirements. The natural drainage of the town is fairly good, but unhealthy trades are carried on within town limits.

71. Sanitation is making some progress in all the important States of Rajputana. Protection of the water-supply, regular cleaning of cities and towns, and surface drainage are receiving much more attention than hitherto. During the cholera epidemic wells have been cleaned and regularly disinfected by the introduction of permanganate of potash with the consent of the people, and this has often had a marked effect in arresting the epidemic. Both officials and educated people have cordially co-operated in plague prevention arrange-

ments, and to this fortunate combination may be attributed the immunity from the disease which up to the present exists in Rajputana, notwithstanding that cases imported from infected areas on both sides of the province have been of frequent occurrence throughout the year.

72. Residency and Agency Surgeons have given much attention to village sanitation while on tour. In Jaipur there is a specially trained Assistant Surgeon in charge of the Sanitary Department of the State, and in Jodhpur an Hospital Assistant. Vaccinators in some States are trained in elementary sanitation, so that they may be able to advise the people among whom their ordinary work lies in sanitary measures that can be easily carried out. Sanitation ought to be taught in all schools in Native States and made a subject of examination.

VACCINATION.

TABLE 9.—ABSTRACTS OF STATEMENTS I AND II.

		Average number of Vaccinators.	Primary Vaccination.			Re-vaccination.			Cost.		Average number of operations by each vaccinator.
			Total.	Successful.	Percentage.	Total.	Successful.	Percentage.	Total.	Per successful case.	
									Rs. a. p.	Pies.	
Ajmer Division	1898-99	13	17,816	17,541	98·46	132	86	65·15	2,184 13 9	24	1,380
	1899-1900	13	26,077	25,838	99·08	1,003	911	90·83	2,276 7 6	16	2,083
Native States	1898-99	242	334,374	331,946	99·27	1,309	727	55·54	31,715 1 9	18	1,387
	1899-1900	232	349,476	344,447	98·56	10,410	7,971	76 57	31,172 7 11	17	1,551

73. The above table shows the primary vaccinations and re-vaccinations performed both in Ajmer-Merwara and in Native States of Rajputana during the official years of 1898-99 and 1899-1900 and the total cost of this Department.

74. In Ajmer-Merwara there was a very large increase in primary vaccinations, *viz.*, 26,077 against 17,816 in 1898-99, and the percentage of success rose from 98·46 to 99·08, and re-vaccination rose from 132 to 1,003 during the year under report, and the successful percentage from 86 to 911. The increase in the number of primary and secondary operations performed is due in part to the opening of famine relief works on account of failure of rains and small-pox in epidemic form in the district and among immigrants.

75. One Native Superintendent and 13 vaccinators have been employed in this division as in the previous year. The average number of persons vaccinated by each vaccinator rose from 1,380 in 1898-99 to 2,083 in 1899-1900, and the expenditure on this rose slightly on account of increased allowances to vaccinators, *viz.*, from Rs. 2,184-13-9 to Rs. 2,276-7-6 in the year under report.

76. The cost of each successful case was 16 pies as compared with 24 pies in 1898-99.

77. During 1899-1900, 49·32 per mille of the population of Ajmer-Merwara were vaccinated against 32·50 per mille during the previous year, and although it is satisfactory to be able to note an increase in this direction, there is still much more to be done.

78. The Civil Surgeon, Ajmer, inspected 641 against 78 vaccinations in the previous year.

79. The appointment of another vaccinator to Merwara was sanctioned at the end of the current official year, and it is hoped that the work will now be done satisfactorily in that district.

80. The Native Superintendent of Vaccination in Ajmer-Merwara inspected 262 villages and saw 10,614 children against 8,225 in the previous year.

81. In Native States the primary vaccinations rose from 334,374 in 1898-99 to 349,476 in the year under report, and 98·56 per cent. of these were successful against 99·27 in 1898-99. The increase in the number of primary operations indicates satisfactory progress. The greatest increase has been in Jaipur.

82. There were 232 vaccinators employed against 242 in the previous year. A reduction of 10 took place in Marwar, 2 in Bikaner, 2 in Jhalawar, and 1 in Mewar, and 2 additional were engaged in Kotah, 1 in Jaipur, 1 in Dholpur and 1 in Karauli.

83. The average number of vaccinations performed by each vaccinator rose from 1,387 to 1,551 in 1899-1900, and the work varied in different States from 2,920 operations in Bharatpur to 123 in Bundi, and it bore a ratio to the supervision exercised over it.

84. There were 89,234 primary successful vaccinations performed in Jaipur, 82,469 in Jodhpur, 42,150 in Bharatpur, 26,075 in Alwar, 24,646 in Bikaner, 24,244 in Kotah, 20,232 in Mewar, 7,044 in Dholpur, 5,460 in Tonk, 4,858 in Sirohi, 4,787 in Karauli, 4,579 in Jhalawar, 2,809 in Kishangarh, 2,365 in Jaisalmer, 484 in Pertabgarh, 357 in Dungarpur, 335 in Shahpura, 315 in Kushalgarh, 222 in Bundi and 216 in Banswara. It will be observed that very little is yet done in several of the small backward States to mitigate the ravages of small-pox, while in the large advanced States excellent progress in vaccination is being made.

85. During the year 7,971 successful re-vaccinations were performed, of which 4,515 were done in Bikaner, 1,491 in Jodhpur and 1,288 in Bharatpur State.

86. Vaccination is advancing steadily in most of the States of Rajputana, but Shahpura, Bundi, Banswara, Pertabgarh, Dungarpur and Kushalgarh are still very backward in this most useful Department.

87. The expenditure on vaccination in Native States of Rajputana fell from Rs. 31,715-1-9 in 1898-99 to Rs. 31,172-7-11 in the year under report, and the cost of each successful case from 18 to 17 pies, which is attributed to the reduced number of vaccinators employed in Marwar.

88. Lymph is kept up throughout the year in most of the important States by carrying on vaccination in cool places during the hot weather, and humanized lymph is generally used. Buffalo calf lymph was used as much as possible; however, the great mortality among cattle consequent on famine hindered the work in many places.

89. Vaccination is making excellent progress in the important States of Rajputana, and its good effects could be readily observed during the recent epidemic of small-pox. It is, however, to be regretted that little is yet being done to mitigate the ravages of this terrible disease in Banswara, Bundi, Shahpura, Dungarpur and Pertabgarh, and these neglected places are potent in hatching small-pox epidemic, which spread throughout the country.

TABLE 10.—*Verification of Returns of Vaccination.*

Name of District or State.	Superintendent and Native Superintendent.	Number of towns and villages visited.	Successful cases seen. Three good marks.	Two good marks.	One good mark.	Total.	Unsuccessful cases seen.	Total number seen.	Percentage of success amongst cases seen.	Number of vaccinations and re-vaccinations in each State. * The Staff Surgeon, Nasirabad, performed the duties of Superintendent.
† The Residency Surgeon, Jaipur, also supervises operations in Kishangarh.
‡ The Residency Surgeon, Western Rajputana States, also supervises operations in the Jaisalmer and Sirohi States.
§ The services of Hospital Assistants were utilised for a short time as Native Superintendent.
‖ The Residency Surgeon, Mewar, also supervises operations in Pertabgarh, Banswara and Dungarpur.

90. The above table shows the verification of vaccination by the Civil Surgeon, Ajmer, by the Residency and Agency Surgeons and by Subordinate Inspectors.

91. The Residency Surgeon, Jaipur, inspected 287 towns and villages and saw 13,841 children who had been successfully vaccinated; the Civil Surgeon, Bikaner, inspected 40 towns and villages and saw 10,783 children who had been successfully vaccinated; the Residency Surgeon, Jodhpur, saw 6,387 children who had been successfully vaccinated; the Agency Surgeon, Alwar, inspected 211 towns and villages and saw 3,575 children who had been successfully vaccinated; the Agency Surgeon, Eastern Rajputana States, inspected 32 towns and villages and saw 3,362 children who had been successfully vaccinated; the Agency Surgeon, Kotah and Jhalawar, inspected 465 towns and villages and saw 2,811 children who had been successfully vaccinated; and the Residency Surgeon, Udaipur, inspected 2 towns and saw 795 children who had been successfully vaccinated. The Superintendent of Vaccination, Nasirabad, saw 1,016 vaccinated children, 98·42 per cent. of whom had been successfully operated upon.

92. The Residency and Agency Surgeons devoted considerable time to the inspection of vaccination during the cold weather, and to their zeal much of the good work done may be attributed.

93. The Administrative Medical Officer inspected vaccinations at the Head-Quarters and other stations which he visited, and found the work that is being done mostly very good.

SECTION II.—DISPENSARIES.

94. There are now 165 hospitals and dispensaries in Rajputana against 157 in the previous year, and besides these there are 6 Mission and 6 Railway Hospitals open for the treatment of patients.

95. In Ajmer-Merwara there were 7 dispensaries open as in the previous year, and Agency and Salt Dispensaries also remained the same as before, *viz.*, 11. Seven new institutions were opened in Native States, *viz.*, 5 in Kotah, 1 in Marwar, 1 in Dholpur, and the female dispensary was re-opened in Karauli city.

96. The Mayo Hospital, Jaipur, has had several important improvements carried out in it during the year, and it is now one of the most perfect in India.

97. Three separate eye wards have been added to the Alwar Hospital, and a Laboratory is about to be attached.

98. The Victoria Hospital, Bharatpur, is approaching completion, and the female wing has been opened for the treatment of patients.

99. Many improvements have been made in out dispensaries, and the progress in hospitals and dispensaries may be considered satisfactory notwithstanding the difficulties of the year.

100. Famine dispensaries have been opened on famine reliefs all over the country, and much medical aid has been given to the people in them.

TABLE 11.—*Statistics of Charitable Medical Relief in the different States of Rajputana and Ajmer-Merwara during the year 1899.*

101. Table 11 shows in a condensed form the medical relief given in Mission, Railway and all other hospitals and dispensaries in Rajputana.

TABLE 12.—*Cases and Deaths.*

STATEMENT II.

		Cases treated.		Daily Average.		Average duration.		Percentage of in-door to total cases.	Deaths.	
		In-door.	Out-door.	In-door.	Out-door.	In-door residence.	Out-door visit.		In-door.	Percentage to cases in-door.
Ajmer Division. . .	1898	712	53,756	28·07	347·94	14·39	2·36	1·31	62	8·71
	1899	1,316	56,412	50·49	379·70	14·00	2·46	2·28	206	15·65
Agency Hospitals and Salt Dispensaries.	1898	604	23,111	23·35	266·81	14·11	4·21	2·55	22	3·65
	1899	508	23,304	25·24	268·30	18·13	4·20	2·13	21	4·13
Native States . . .	1898	14,374	922,951	688·68	7,821·35	17·49	3·09	1·53	440	3·06
	1899	17,328	999,263	826·40	8,542·19	17·41	3·12	1·71	808	4·66

102. The above table shows the in-door and out-door patients treated, daily average number of sick, the average duration of treatment, the percentage of in-door to total cases, and the deaths and percentage of deaths among in-door patients for the year under report as well as for the previous year.

103. In Ajmer-Merwara 1,316 in-door and 56,412 out-door patients were treated in all hospitals and dispensaries against 712 in-door and 53,756 out-door patients in the previous year. This increase is attributed to a large number of paupers coming from the adjacent Native States on account of failure of monsoon. The mortality in these hospitals rose from 62 to 206, which is due to famine-stricken paupers, who were mostly brought to hospitals by the police in a moribund condition.

104. In Agency and Salt Dispensaries the in-door patients fell from 604 in 1898 to 508 in the year under report, while the out-door rose from 23,111 to 23,304. The increase in out-door patients shows a greater popularity of European methods of treatments, as patients from the villages adjacent to these dispensaries make up much of the out-door attendance. The deaths in these hospitals and dispensaries fell from 22 to 21 during 1899.

105. In the hospitals and dispensaries supported by Native States in Rajputana 17,328 in-door and 999,263 out-door patients were treated against 14,374 in-door and 922,951 out-door patients in the previous year. This increase may be partly attributed to new institutions and partly to increased sickness among the people as the consequence of bad and insufficient food and defective water-supply.

106. The percentage of deaths among in-door patients rose in all the dispensaries, and this was, no doubt, in great part due to the low condition in which the poorest stratum of the population had fallen during the year under report. The deaths from diarrhœa and dysentery were more numerous than in the previous year, and these diseases would naturally be more fatal among a population reduced by inferior food and scarcity than in a year of plenty.

TABLE 13.—*Causes of Admissions and Deaths.*

STATEMENT III.

		PERCENTAGE TO TOTAL CASES AND DEATHS.									
		Malarial fevers and spleen.	Cholera.	Rheumatism.	Diseases of the eye.	Lung and respiratory diseases.	Diarrhœa and Dysentery.	Ulcers.	Skin diseases.	Injuries.	All others.

	1899	7	·74	·74	·25	20	25	3	·12	10	34

107. The above table shows the causes of admissions and deaths.

108. As usual, malarial fevers and spleen diseases were the most common ailments seen at the hospitals and dispensaries. In Ajmer-Merwara these affections gave rise to 11 per cent. of the total treated against 17 per cent. in the previous year, and to 7 against 8 per cent. of the deaths. In Agency and Salt Revenue dispensaries the admissions for malarial fevers and spleen diseases fell from 30 to 26 per cent. of the total treated, but there was no mortality during the year under report against 9 per cent. in 1898. In the hospitals and dispensaries of Native States, 13 against 15 per cent. of those treated were for malarial fevers and spleen diseases, while the deaths from these causes were 7 per cent. as in the previous year. This decrease in admissions from fevers is due to the scanty rainfall and consequent dryness of the year.

109. Lungs and respiratory diseases gave rise to 8 per cent. of the total treated in the Ajmer Division against 7 per cent. in the previous year, but the mortality fell considerably from 32 per cent. of the total deaths in 1898 to only 13 per cent. in 1899. In Agency and Salt dispensaries 12 per cent. of the total treated were for lungs and respiratory diseases against 10 per cent. in the previous year, and 48 per cent. of the deaths were from these affections against 68 recorded in 1898, and in Native States dispensaries the admissions for these affections fell from 8 to 7 per cent. of the total treated, and the deaths from these causes also fell from 23 to 20 per cent. in 1899.

110. In the Ajmer division 5 per cent. of the total treated were for diarrhœa and dysentery against 3 per cent. in the previous year, and the death-rate was higher from these causes, *viz.*, 38 against 26 in 1898; in Agency and Salt dispensaries these affections gave rise to 6 per cent. of the total treated against 5 per cent. in the previous year, and the death-rate rose considerably from 5 to 38 per cent. in 1899, and in Native States dispensaries 5 per cent. of the total treated were for dysentery and diarrhœa against 4 in the previous year, and 25 per cent. of the deaths were from these causes against 18 per cent. recorded in 1898. The high death-rate from these affections in all institutions of Rajputana was due to the scarcity which prevailed in the year under report.

111. Injuries and diseases of the eye were the same as in the previous year in Ajmer Division and in Agency and Salt dispensaries, but there was an increase in the numbers treated for these affections in Native States dispensaries.

TABLE 14.—*Cases of Leprosy treated in the Dispensaries of Rajputana.*

Native States . . .	125	754	129	788	131	791	136	625	139	610	147	582
TOTAL .	144	789	148	835	149	842	154	650	157	638	165	625

112. The above table shows the cases of leprosy treated at all hospitals and dispensaries in Rajputana.

113. There were 625 cases of leprosy seen in Rajputana hospitals and dispensaries during the year under report against 638 in the previous year and 650 in 1897. This disease again shows a decrease notwithstanding the increase in dispensaries and great increase in attendance. It has become less prevalent in this part of the country, although no specific treatment has yet been found.

114. *Small-pox.*—Small-pox occurred in Ajmer-Merwara and in 14 States of Rajputana against 12 States in the previous year. There were 962 deaths in Ajmer-Merwara from this disease and 2,061 in Native States against 409 in the Ajmer Division and 590 in Native States in 1898. The disease was in epidemic form in Ajmer-Merwara and in Native States between August and the end of the year under report, and was widely spread by famine-stricken immigrants in search of food and pasture. Much vaccination and re-vaccination was done, and this greatly reduced the severity of the outbreak.

115. *Snake poisoning* .—Calmette's antivenine is kept in stock and used for the treatment of snake-bite when opportunity offers for testing its value in virulent snake-poisoning.

116. *Bubonic Plague.*—Between the 1st of April and the end of June 1899 no case of bubonic plague was imported from the infected area into Rajputana. After the latter date, occasional cases began to appear on the Railway, and up to the end of March 1900, 22 cases of plague or suspected plague were discovered by the inspecting officers, 19 of which proved fatal. Six indigenous cases of suspected plague occurred at Gandhar in Pertabgarh State, of which three were fatal. The outbreak was promptly dealt with by evacuation, segregation, and the burning of infected houses.

117. Disinfection is carried out by means of a steam boiler at each of the plague camps in Rajputana with apparently satisfactory results.

118. None of the imported cases were allowed into villages, and this was no doubt the saving of the province.

119. Inoculations have been carried out on contacts with Professor Haffkine's prophylactic when this has been possible, but there has not been much opportunity of judging of its effects.

TABLE 15.—*Sex, Age, and Caste.*

STATEMENT IV.

		PERCENTAGE OF THE TOTAL TREATED.				
		Men.	Women.	Children.	Hindu.	Musalman.
Ajmer Division	1898	52	19	29	71	28
	1899	51	19	30	72	22
Agency Hospitals and Salt Dispensaries.	1898	63	15	22	53	28
	1899	62	16	22	47	32
Native States	1898	54	20	26	67	27
	1899	53	21	26	67	27

120. The above table shows the sex and caste of the attendance at the hospitals and dispensaries throughout the country.

121. In the Ajmer Division 51 per cent. of those who attended were men, 30 per cent. children and 19 per cent. women; in Agency and Salt Revenue dispensaries 62 per cent. of those who attended were men, 22 per cent children and 16 per cent. women, and in Native States institutions 53 per cent. were men, 26 per cent. children, and 21 per cent. women. These figures vary very little year by year; in some places hospitals for women are taking some of the female patients, and these institutions attract also a new class of patients who did not seek medical aid at the ordinary hospitals and dispensaries.

122. The population of Rajputana is largely composed of Hindus, the Mahomedans being in a minority; as a natural consequence, Hindus form a majority of the patients attending the hospitals and dispensaries.

123. The only exception to this rule is the Salt Revenue dispensaries, where the employés are principally Mahomedan and the majority of the patients are Mahomedan also.

124. The above table shows the operations performed both in Ajmer-Merwara and in Native States during 1898 and 1899 according to the new Nomenclature of Diseases, which requires all surgical operations to be returned under one heading, excluding vaccinations, passing of catheters, introduction of seton, hypodermic injections, removal of wax from the ear and cupping, in accordance with the orders contained in circular letter No. 1442-48, dated the 29th August 1899, from the Government of India, Home Department, to Local Governments and Administrations.

125. In Ajmer-Merwara 3,197 operations were performed against 3,019 in the previous year with 5 against 2 deaths.

126. Of the operations performed in this division 1,256 were done in the Ajmer General Hospital, 1,273 in Beawar, 181 in Todgarh, 177 in Pisangan, 171 in Kekri, 83 in Ramsar and 56 in Deolia Dispensary.

127. At Ajmer and in out dispensaries 82 extractions of the lens for cataract were performed by Lieutenant-Colonel D. ffrench Mullen, I.M.S., 89·02 per cent. of which were followed by good vision. At Beawar and Todgarh 38 extractions of the lens for cataract were performed by Assistant Surgeon Ishan Tosh Mittra, 97·36 per cent. of which were followed by good sight. In Ajmer 4 lithotomies and 3 litholapaxies were performed, in Beawar 18 litholapaxies and 4 lithotomies, all successful, 5 amputations were done in Ajmer, 4 in Beawar and 1 in Todgarh without a death.

128. In the Mission Hospitals at Ajmer 470 operations were performed in the ordinary and 316 in the Women's Hospital; of these 42 and 17 respectively were returned as major and the rest as minor operations in accordance with the old Nomenclature of Diseases still adhered to in Mission Hospitals.

129. In Native States hospitals and dispensaries 62,213 operations were performed against 61,470 in 1898, with 55 deaths against 40 in the previous year. Of these operations 1,867 were extraction of the lens for cataract, 118 litholapaxies, 76 lithotomies and 169 amputations against 1,583 extractions of the lens, 89 litholapaxies, 70 lithotomies and 141 amputations in the previous year. Operations on females rose considerably in Women's Hospitals.

130. There was an increase in the number of operations performed in 13 States, *viz.*, Udaipur, Bikaner, Jodhpur, Jaipur, Tonk, Sirohi, Jaisalmer, Dholpur, Karauli, Kishangarh, Kotah, Shahpura and Dungarpur, and a decrease in 6 States, *viz.*, Bharatpur, Alwar, Bundi, Pertabgarh, Banswara and Jhalrapatan. This increase is attributed to greater popularity and interest in medical treatment.

131. In Jaipur, Kishangarh and Sambhar 12,806 operations were performed with 11 deaths, and the most important of these were done in the Mayo Hospital, Jaipur. The Residency Surgeon performed 544 extractions of the lens for cataract, 2 lithotomies, 24 litholapaxies and many other important operations. Assistant Surgeon Daljang Singh Khanka, of the Mayo Hospital, Jaipur, heads the list of Assistant Surgeons in operations.

132. In Jodhpur, Jaisalmer and Sirohi 10,792 operations were performed with 10 deaths. Lieutenant-Colonel A. Adams, I.M.S., performed the largest number of extractions of the lens for cataract, *viz.*, 610, and most of these were done in the Hewson Hospital, Jodhpur; he also performed 10 lithotomies, 26 litholapaxies and many other important operations. Miss Adams, the Lady Doctor at Jodhpur, performed 26 extractions of the lens for cataract, 12 obstetric operations, and many other operations. The Mission Surgeon in that place performed 912 operations.

133. In Udaipur, Pertabgarh, Banswara and Dungarpur 8,156 operations were performed with 8 deaths. Most of the important operations were done in the Lansdowne Hospital at Udaipur and in Bhilwara Dispensary. There is a Mission Hospital at Udaipur and also an Hospital for women; in the former 1,596 operations were performed, 74 of which were returned as major operations, whereas in the latter 53 operations were done, 3 of which were important operations.

134. In Bikaner 7,547 operations were performed with 4 deaths against 5,849 in the previous year; the returns from this State show a most satisfactory increase in Surgery. Major W. H. B. Robinson, I.M.S., the Civil Surgeon,

performed 118 extractions of the lens for cataract, 3 lithotomies and many other important operations during the year under report. The operations done in the female wings of the Bhagwan Das Hospitals at Bikaner and Churu are also included.

135. In Kotah and Jhalawar 6,191 operations were performed with 5 deaths. Lieutenant-Colonel J. Crofts, I.M.S., the Agency Surgeon, performed 188 extractions of the lens for cataract, 3 litholapaxies and other important operations.

136. In Bharatpur 3,905 operations were performed, with 5 deaths. There were 18 extractions of the lens for cataract, and 5 litholapaxies performed.

137. In Karauli 2,006 operations were performed against 1,933 in the previous year, in Tonk 1,839 against 1,548, in Dholpur 1,137 against 1,072, and in Shahpura 1,060 against 1,017.

138. Second Class Hospital Assistant A. D. Burnis Sewaie, now in charge of the Chitorgarh Dispensary in Mewar, performed the largest number of important operations among Hospital Assistants, and Third Class Hospital Assistant Zahur Peer, of Jalore Dispensary in Marwar, did the largest number of lithotomies in this class.

139. It is satisfactory to note that good progress has been made in surgery in most of the States of Rajputana, notwithstanding that, in accordance with circular letter No. 1442-48, dated 29th August 1899, from the Officiating Secretary to the Government of India, Home Department, to Local Governments and Administrations, the following operations have been omitted from the dispensary returns :—

Vaccination,	Hypodermic injection,
Passing of catheters,	Removal of wax from the ear, and
Introduction of seton,	Cupping.

TABLE 17.—*Surgical operations for Mycetoma.*

NAME OF OPERATION.		NUMBER.
AMPUTATIONS	Forearm	1
	Hand	2
	Thigh	1
	Leg	20
	Foot	19
Excision of soft parts		95
	TOTAL	138

140. The above table shows the operations performed for Mycetoma during the year. Many of these have been excisions of soft parts where the disease has been met with in the early stage when it could be successfuly dealt with in this way, and the limb saved.

141. There were 43 amputations and 95 excisions of soft parts performed against 19 amputations and 79 excisions in the previous year; 81 of the operations were performed in Marwar, 36 in Bikaner, 16 in Jaipur, 2 in Jaisalmer, 2 in Sirohi and 1 in Alwar.

142. The above table shows the important operations performed by each Medical Officer, Lady Doctor, Assistant Surgeon and Hospital Assistant, during the year under report, and many operations hitherto shown have been omitted on account of their being of comparatively less importance than those under the headings now given.

TABLE 19.—*Expenditure.*

STATEMENT V, PART I.

		1898.	1899.	Percentage on the total cost of 1899.
AJMER DIVISION	ON ESTABLISHMENT.	R	R	
	Paid by Government—			
	1. Medical Officers	2,945	2,615	22·01
	2. Compounders, Dressers, etc.	330	347	2·92
	3. Menial Servants	180	180	1·51
	Paid from Local Sources as salaries—

	TOTAL	2,84,128	3,02,217	100·00
		Pies.	Pies.	
AJMER DIVISION	Cost per case treated	39	40	
	Cost per diet per diem	22	17	
AGENCY HOSPITALS AND SALT DISPENSARIES.	Cost per case treated	80	86	
	Cost per diet per diem	5	14	
NATIVE STATES	Cost per case treated	58	57	
	Cost per diet per diem	21	23	

143. The above table shows the total expenditure on hospitals and dispensaries and also the cost of each case treated.

144. In the Ajmer Division the expenditure on hospitals and dispensaries rose from Rs. 11,040 in 1898 to Rs. 11,882 in the year under report; the increase was mainly due to diets owing to the admission of a large number of pauper patients brought into the hospital mostly by the police.

145. There is a decrease in the cost of Establishment paid by Government, as there was only one Third Class Hospital Assistant in the Ajmer General Hospital instead of two till the 2nd November 1899, when an Assistant Surgeon took charge of the Hospital, and hence the percentage of total cost paid by Government fell from 48·36 to 41·75 in the year under report.

146. The invested capital of these dispensaries remained the same as in the previous year, *viz.*, Rs. 8,500.

147. The subscriptions from Europeans increased to Rs. 176 against Rs. 93 in the previous year, but those from natives decreased to Rs. 1,008 against Rs. 1,373 in 1898.

148. The expenditure statement of the Ajmer General Hospital showed an increase of expenditure at the end of the year, and consequently there was a debit balance of Rs. 699 against this hospital at the end of the year.

149. The financial position of the Kekri, Pisangan, Deolia and Ramsar Dispensaries is now satisfactory.

150. There was an increase in expenditure in Beawar and Todgarh Dispensaries on diet, miscellaneous and buildings. The Beawar dispensary closed with a credit balance of Rs. 273-13-3, and the outstanding debit on Todgarh Dispensary rose from Rs. 297-15-11 to Rs. 391-5-1 during the year under report.

151. The expenditure on Political Agency and Salt Dispensaries rose from Rs. 10,307 to Rs. 10,635, which is due to the payment of salary of Hospital Assistants attached to the Western Rajputana States Residency Hospital and Kotra Agency Hospital at the increased rate, as they passed their examination for promotion to the higher grade during the year.

152. In the Abu and Abu Road Dispensaries the expenditure rose from Rs. 1,821 to Rs. 2,055 on account of extra medicines supplied, as the attendance was greater, and on miscellaneous. The subscriptions to these dispensaries fell from Rs. 1,543 to Rs. 1,048; however, the invested capital remained the same, and they are financially satisfactory. These dispensaries are partly supported by Government and partly by contributions collected at Mount Abu.

153. The expenditure on hospitals and dispensaries in the States of Rajputana rose from Rs. 2,84,128 to Rs. 3,02,217 in the year under report on account of extra medicines and diets supplied, but the expenditure was necessary, as the attendance was greater owing to a large number of pauper in-patients attending the hospitals on account of a serious attack of famine, and also to a greater cost of diets for in-patients. There was also an increase in expenditure under all headings except buildings and repairs, under which there was a considerable decrease when compared with that of the previous year, as no new buildings were constructed.

154. Of the total sum above shown, Rs. 62,446 were expended in Jaipur, Rs. 48,886 in Jodhpur, Rs. 31,623 in Bikaner, Rs. 30,190 in Kotah, Rs. 27,706 in Udaipur, Rs. 25,384 in Alwar, Rs. 23,659 in Bharatpur, Rs. 8,853 in Jhalawar, Rs. 8,316 in Tonk, Rs. 7,599 in Dholpur, Rs. 6,103 in Karauli, Rs. 3,508 in Sirohi, Rs. 2,730 in Jaisalmer, Rs. 1,988 in Bundi,

Rs. 1,886 in Kishangarh, Rs. 1,831 in Shahpura, Rs. 1,696 in Dungarpur, Rs. 1,380 in Banswara, Rs. 1,262 in Pertabgarh and Rs. 465 in Kushalgarh. A considerable increase in expenditure in Kotah has been due to the restoration to that State of a portion of the Jhalawar territory, in which 4 dispensaries were situated, and opening of 5 new dispensaries during the year under report.

155. There was an increase in expenditure in Bikaner under almost all headings except buildings and repairs, under which there was a considerable decrease, *viz.*, Rs. 3,812 against Rs. 12,895 in 1898.

156. A well qualified Hospital Assistant is much needed at Bundi and Kushalgarh, where the medical arrangements are still very backward.

157. The average cost of each case treated in Ajmer-Merwara rose from 39 to 40 pies in the year under report, and in Political Agency and Salt Revenue dispensaries from 80 to 86 pies. In Native States there was a reduction in the cost of each case treated when compared with the previous year, *viz.*, from 58 to 57 pies, which was attributed to the decrease in expenditure on buildings and repairs, diets having been unusually expensive.

MISSION HOSPITALS.

158. During the year under report there were 6 Mission Hospitals in Rajputana, *viz.*, 2 at Ajmer, 1 at Nasirabad, 1 at Udaipur and 1 at Jodhpur, and besides these, a Female Hospital was opened temporarily at Jaipur for six months only.

159. In the Mission Hospital at Ajmer 19,353 new out-door patients were treated, the old cases treated numbered 54,592, the in-patients 126 and the operations 1,173, of which 42 have been described as major operations according to the old Nomenclature of Diseases. In the Women's Hospital at Ajmer 4,031 new cases were treated, the old cases or re-attendance numbered 8,727, the in-patients 70 and the operations 333, of which 17 have been described as major operations. Besides, 2,506 visits were paid by the hospital staff to patients at their houses, and medicines and medical advice given In Nasirabad 9,159 new out-door cases were treated, the old cases or re-attendance numbered 27,549, and the in-door patients 277 ; there were 931 operations performed, of which 48 were major operations. In Udaipur 16,381 new out-door patients were treated, the old cases or re-attendance numbered 40,964, the in-patients 343, and the operations 1,596, of which 74 have been described as major operations. In Jodhpur 6,137 new out-door cases were treated, the re-attendance or old cases numbered 28,697, and the in-door patients 86 ; there were 912 operations performed, of which 85 have been described as major operations. Besides, 2,506 visits were paid by the hospital staff to people at their houses. In Jaipur 307 new out-door patients were treated and 15 operations performed, of which 3 have been returned as major operations. Besides, 221 visits were paid by the hospital staff to people at their houses.

RAILWAY HOSPITALS.

160. There were six Railway Hospitals on the Rajputana-Malwa Railway within the limits of Rajputana as in the previous year, *viz.*, one at Abu Road, one at Sojat Road, two at Ajmer, one at Phulera, and one at Bandikui.

161. During the year under report 43,873 in- and out-door patients were treated in the above hospitals and 442 operations performed, of which only 7 were major operations under the old Nomenclature of Diseases. In Abu Road Hospital 32 in- and 3,032 out-patients were treated and 78 minor operations performed ; in Sojat Road 7,752 out-door patients were treated and 58 minor operations performed ; in Ajmer 156 in- and 7,560 out-patients were treated and

117 operations performed, of which only 3 were major operations; in Phulera Hospital 1,959 out-patients were treated, and in Bandikui 2,141 in- and 21,241 out-door patients were treated and 189 operations performed, of which 4 were major operations. Besides the people employed on the railway, some of the villagers adjacent also receive medical aid, and this should be encouraged, as it is of great advantage to the public, and enables the Railway Medical Officers and subordinates to acquire experience.

INSPECTIONS.

162. The Administrative Medical Officer in Rajputana inspected all the head-quarters stations of Residencies and Political Agencies of Rajputana and also Bundi and Pertabgarh. He made frequent inspections of the plague prevention arrangements and most of the famine relief works, poor-houses and orphanages.

SALE OF QUININE.

163. During the year 1899 quinine packets were sold at 91 against 135 post offices in the previous year. The total sales effected amounted to 164 packets of 102 powders each, equal to 16,524 doses of 5 grains each against 33,150 doses of 5 grains each in 1898. On account of the dryness of the season, malarial fevers were less prevalent than usual, and this would account for the diminished sales of quinine.

164. The largest quantity disposed of was in Mewar, where 57 packets, equal to 5,814 doses of 5 grains each, were sold, and in Kotah 29 packets, equal to 2,958 doses of 5 grains each.

165. There was a falling off in the sales effected in Marwar and Sirohi, *viz.*, 21 against 57 packets and 7 against 21 packets, respectively, in 1898, and only a few powders were disposed of in Kishangarh.

166. Although, as in the previous year, the largest sales were effected in towns near the railway, and the drug is not yet much appreciated by the ordinary villagers, it has been decided to continue the scheme for a further period, as this can be done at little cost to the States.

SECTION III.—JAILS.

TABLE 20.—*Cases and Deaths.*

		Number of Jails.	Average number of prisoners of all classes.	Cases in hospital.	Daily average sick.	Deaths.	Average duration of cases in days.	Percentage of deaths to cases.	Death-rate per thousand prisoners per annum.				
									Total.	*Quarters of the year.*			
										First.	Second.	Third.	Fourth.
Ajmer Division	1898	1	287·74	75	4·41	4	21	5·33	13·90	13·88	...	...	41·68
	1899	1	371·70	94*	6 24·	5	24	5·32	13·45	10·76	...	...	43·04
Native States	1898	20	4,679·58	3,636	112·32	90	11	2·47	19·23	23·92	16·24	13·68	23·08
	1899	20	5,194·51	3,486*	116·25	155	12	4 45	29·84	17·72	12·32	25·40	63·92

* The number of sick remaining on 31st December 1898 has been included.

167. The above table shows the numbers of jails in Rajputana, the average number of prisoners, the average sick, and the death-rate per mille for two years in succession.

168. The daily average number of prisoners in the Ajmer Jail rose from 287·74 in 1898 to 371·70 in 1899 owing to famine in Ajmer-Merwara, the daily average sick from 4·41 to 6·24, the mortality from 4 to 5, but the death rate fell from 13·90 to 13·45 per mille.

Native States Jails.

169. Returns have been received from 20 jails in the Native States of Rajputana as in the previous year.

170. The daily average number of prisoners in these jails rose from 4,679·58 in 1898 to 5,194·51 in the year under report, but the total number treated in hospital fell from 3,636 to 3,486.

171. The daily average sick rose from 112·32 to 116·25, the mortality from 90 to 155 and the death rate from 19·23 to 29·84 per mille. The high mortality was attributed to the great and constant over-crowding throughout the year, and the bad state of health of many of the prisoners on admission on account of famine.

TABLE 21.

YEAR.	PRICE OF WHEAT PER RUPEE.		AJMER DIVISION.		NATIVE STATES.	
			Average number of prisoners.	Death-rate per thousand.	Average number of prisoners.	Death-rate per thousand.
	Srs.	Chs.				
1895	13	6½	330·78	45·35	4,556·76	28·09
1896	9	8	301·77	13·26	4,792·23	28·17
1897	8	12	292·52	6·84	4,919·73	23·58
1898	12	1	287·74	13·90	4,679·58	19·23
1899	11	7	371·70	13·45	5,194·51	29·84

172. The above table shows the average price of wheat for five years, the average number of prisoners in Ajmer and in Native States jails as well as the death-rate per thousand of population.

173. The death-rate in Ajmer Jail has been unusually low during the year under report, and it is apparent that this fall in mortality is due principally to the careful management of the jail, and not to season influence.

174. The death-rate in the jails of Native States has been high during 1899, and this has been attributed to the fact that some of the convicts were old and in indifferent health on admission.

TABLE 22.—*Causes of admissions and deaths.*

STATEMENT III.

		PERCENTAGE TO THE TOTAL CASES AND DEATHS.									
		Malarial fevers and spleen.	Cholera.	Rheumatism.	Diseases of the eye.	Lungs and Respiratory diseases.	Dysentery and Diarrhœa.	Ulcers.	Skin diseases.	Injuries.	All others.

Ajmer Division	1898	25	...	...	...	75	...	...	...	...	...
	1899	20	...	...	...	40	20	...	...	...	20
Native States	1898	9	...	...	...	38	17	...	...	2	34
	1899	12	...	...	...	22	35	...	...	1	30

175. The above table shows the percentage of admissions and deaths from different diseases in all the Jails of Rajputana.

176. In Ajmer Jail malarial fevers and spleen diseases gave rise to 16 per cent. of the total treated as in the previous year, and to 20 against 25 per cent. of the deaths, lung and respiratory diseases to 31 against 15 per cent. of the sickness and to 40 against 75 per cent of deaths. Dysentery and diarrhœa contributed 5 per cent. of the total treated as in 1898, while the deaths from these causes were 20 per cent. against nothing in the previous year. Skin diseases rose from 1 to 2 per cent. and injuries from 9 to 13 per cent. of the total treated. Eye diseases fell from 4 to 2 per cent. of the total treated, and no cholera occurred in the Ajmer Jail in either year. Of the 5 deaths which occurred in this jail, two were from pneumonia, one from dysentery, one from remittent fever and one from erysipelas.

177. In the jails of Native States malarial fevers and spleen diseases contributed 27 per cent. of the sickness against 31 per cent. in the previous year and 12 against 9 per cent. of the mortality, and lung and respiratory diseases 10 per cent. of the sickness against 12 in 1898 and 22 against 38 per cent. of the total deaths. Dysentery and diarrhœa gave rise to 19 per cent. of the total treated against 12 in 1898 and to 35 against 17 per cent. of the mortality. The high death-rate from these affections was due to the low condition of the prisoners when taken into jail and bad water, which was alone available in some jails.

178. There was no cholera in the jails of Rajputana in 1899, but diarrhœa was epidemic in some of them, and seemed to be wholly due to bad water.

179. *Jodhpur.*—The daily average sick in the Jodhpur Jail rose from 7·40 to 7·68 and the death-rate from 9·52 to 53·49 in 1899. This high mortality is attributed to an epidemic of diarrhœa, bad water and a low condition of the prisoners on admission.

180. *Jaipur.*—Both the jails at jaipur have been generally over-crowded throughout the year, the death-rate in the Central Jail rose from 18·40 to 30·35 and in the District Jail from 8·87 to 14·26 per mille of average strength. The Residency Surgeon reports that the question regarding the chronic condition of over-crowding is a serious one, and demands very early attention and permanent remedy.

181. *Udaipur.*—This jail is in good order, but still overcrowded. A barrack for 100 prisoners and new workshops are under construction. When completed, it will afford sufficient accommodation.

182. *Kishangarh.*—The new jail is in excellent repair and quite adequate for the purpose for which it is intended. Convicts are sent to this jail, and the civil and under-trials kept in the old jail at the city. The death-rate has fallen from 24·62 per mille in 1898 to 12·17 in the year under report.

183. *Bikaner.*—The Bikaner Jail is in excellent order as hitherto, and the prisoners are well looked after.

184. *Alwar.*—The jail at Alwar is in very good order, but the death-rate in the jail rose from 10·33 to 14·94 per mille of average strength.

185. *Bharatpur.*—The Bharatpur Jail is in very good order, and the prisoners are well looked after. The death-rate has fallen from 28·29 to 25·48 and daily average sick from 51·47 to 29·96 per mille of average strength. This shows that the general health of prisoners is improving, which is attributed to the careful supervision of the Agency Surgeon.

186. *Dholpur.*—Although the daily average sick fell from 56·26 in 1898 to 55·44 per mille of average strength in the year under report and the mortality from 61·54 to 38·71, yet this jail is badly situated and badly constructed ; it is, however, hoped that a new jail on modern hygienic principles will be built when funds are available.

187. *Karauli.*—This jail is clean and well looked after, but there is often overcrowding ; the mortality has, however, fallen from 20·98 to 11·74 per mille, and the daily average sick from 22·45 to 20·78 per mille. More accommodation is now urgently needed.

188. *Banswara.*—The death-rate in Banswara Jail has continued very high, and it is proposed to construct a new jail on a healthy site.

189. *Pertabgarh.*—The mortality in this Jail fell from 39·39 to 13·02 per mille, but the sick-rate has continued very high, and it is proposed that a new jail on modern principles be built on a healthy site.

190. *Kotah.*—The Kotah Jail is in good order and clean, but the mortality rose from 25·12 to 29·03 per mille of average strength.

191. *Jhalawar.*—No deaths were reported from Jhalawar Jail, as the overcrowding which hitherto existed has been relieved by the transfer of prisoners to Kotah.

192. Although the jails were nearly all greatly overcrowded throughout the year and although the death-rate rose considerably in many of them, prisoners in the Native States are now much better cared for than hitherto, and the abnormal conditions were brought about by failure of the monsoon rains and famine. Want materially affected the health of the criminal classes outside, and also drove them in unusual numbers into prison. It was impossible in many instances where the rains completely failed to provide pure drinking water for the prisoners in jail, and this greatly augmented the roll of sickness and mortality among them.

193. The Administrative Medical Officer inspected the jails at Ajmer, Jaipur, Alwar, Bharatpur, Bikaner, Udaipur, Kotah and Bundi; the Residency Surgeon, Western Rajputana States, inspected the Sirohi and Jaisalmer Jails; the Residency Surgeon, Jaipur, the Kishangarh Jail, and the Residency Surgeon, Mewar, the Banswara, Pertabgarh and Dungarpur Jails.

194. Everything requiring remedy was pointed out at these inspections, and many improvements were sanctioned, which will be carried out as far as possible.

195. The necessity for regular inspection of jails away from head-quarters was impressed upon medical officers in this office last report, as the progress in jails cannot be expected in backward States unless attention be drawn to defects during visits of inspection.

QUALIFIED MEDICAL STAFF.

196. There were 12 Commissioned Medical Officers employed in Rajputana at the end of the year under report, besides the Military Medical Officers, *viz.*, 3 Residency Surgeons at Jodhpur, Jaipur and Udaipur, 2 Civil Surgeons at Ajmer and Bikaner, and 4 Agency Surgeons at Alwar, Bharatpur, Kotah and Deoli. Besides these, three Medical Officers were employed on plague and famine duty.

197. The Civil Surgeon, Ajmer, is Medical Officer, Merwara Battalion; the Medical Officer, Abu Sanitarium, is Civil Surgeon of Mount Abu; the Agency Surgeon, Haraoti and Tonk, is Medical Officer of the Deoli Irregular

Force; the Medical Officer, Mewar Bhil Corps, superintends the Civil Dispensaries of Kherwara and Kotra; and the Medical Officer, Erinpura Irregular Force, inspects the Sheoganj Dispensary adjacent to the Cantonment of Erinpura.

198. Four Warrant Medical Officers were employed on plague duty temporarily.

199. Two Assistant Surgeons are permanently employed at Ajmer and Beawar, 3 at Jodhpur, 4 at Jaipur, 1 at Jhalrapatan, 1 at Bharatpur and 1 in Bikaner.

200. There are 8 permanent Hospital Assistants employed in Ajmer-Merwara, 10 in Political Agencies and Salt Revenue dispensaries, 2 in Abu and Abu Road Dispensaries, and a reserve of 3 to act for the above from time to time. Besides these, 6 permanent Reserve Hospital Assistants have been temporarily engaged for famine duty in Ajmer-Merwara and 3 Failed Assistant Surgeons, 1 retired Hospital Assistant and 1 qualified Hospital Assistant were temporarily employed for that duty.

201. There are 132 qualified Hospital Assistants lent by Government and permanently employed by Darbars, and a reserve of 15 more to act temporarily for them.

There are still 17 Local Class Hospital Assistants employed, *viz.*, 7 in Bharatpur, 6 in Jaipur, 2 in Dholpur, 1 in Bikaner and 1 in Mewar. Besides these, there are 7 Local Class Native Doctors who were locally entertained by the different States in Rajputana, *viz.*, 2 in Bharatpur, 1 in Marwar, 1 in Dholpur, 1 in Bundi, 1 in Mewar and 1 in Kushalgarh. It is hoped that these Local Class Native Doctors will shortly be replaced by qualified men from the List.

202. There are 8 Military Hospital Assistants employed with the Imperial Service Troops of Rajputana and 1 Local Class Native Doctor at Alwar.

203. Considerable difficulty has been experienced in providing Hospital Assistants for famine, plague and cholera duty in Rajputana, as no Medical pupils of the North-Western Provinces and Oudh have joined after passing their final examination. They are said to have been temporarily employed in those Provinces.

204. Four Lady Doctors are at present employed in Rajputana as in the previous year, and there are 12 Female Hospital Assistants against 13 in 1898.

FEMALE HOSPITALS AND EDUCATION OF WOMEN.

205. *Ajmer.*—Miss Campbell has been Superintendent of the Mission Hospital for Women at Ajmer since January 1899. Much good work has been done by this lady and her subordinates during the year both in the Hospital and in zenanas. The number of patients treated and the other medical work done is shown under Mission Hospitals.

206. *Beawar.*—Female Hospital Assistant Champa*Bai has been in charge of the Beawar Dispensary for women throughout the year. There were 7,908 out-patients treated against 7,178 in the previous year, and 129 patients (pardanashin) visited at their homes free of charge against 105 last year. This Hospital Assistant has done good work in the dispensary, and made herself popular in the city.

*Since dead from cholera.

207. *Jodhpur.*—Miss Adams, M. D., has been in charge of the Jaswant Hospital for women at Jodhpur throughout the year, and the returns show a satis-

factory increase. The number of in-and out-door patients treated in the hospital was 406 and 9,197 against 273 and 8,035 respectively in the previous year, and 620 operations performed against 774, of which 26 were extractions of the lens for cataract and 12 obstetric operations. Notwithstanding the considerable difficulty experienced in obtaining sufficient water in the city on account of the total failure of the monsoon, it is satisfactory to note that the attendance at the hospital has improved. Miss Adams visited many pardanashin ladies at the palace and at their own houses in addition to those treated in the hospital.

208. Mrs. Bose, a qualified Hospital Assistant, resides in the hospital, and gives valuable assistance to the Lady Doctor.

209. *Alwar.*—Miss Lauder has been in charge of the Dufferin Hospital at Alwar throughout the year. There has been an increase in the number of in-patients treated, and many pardanashins were seen at their own homes. The Hospital staff worked satisfactorily throughout the year.

210. Both the Hospital Assistants attached to this hospital passed their examination for the second class at Agra in April 1899, and their salaries have been increased by Rs. 15 each on condition that they pass their English qualification examination within a year.

211. *Tonk.*—Miss DeSouza has been in charge of the Walter Female Hospital at Tonk throughout the year, and has done good work in it. There has been an increase in the out-patients treated, and the in-patients have only fallen off a little on account of economies which had to be carried out. There were 422 operations performed against 407 in the previous year.

212. The pardah arrangements of the hospital have been improved by raising the compound wall.

213. *Bharatpur.*—Bibi Rup Kuar has been in charge of the Female Department of the hospital at Bharatpur, and she has done good work. During the year under report 9,548 in-and out-door patients were treated against 9,079 in the previous year. Female patients are now well accommodated in this hospital.

214. *Udaipur.*—Miss Graham has been in charge of the Walter Zenana Hospital at Udaipur throughout the year. There has been an increase in the number of in-and out-door patients treated during the year. There is no Female Hospital Assistant at present; however, endeavours are being made to obtain the services of one to reside in the hospital.

215. *Bikaner.*—A qualified Female Hospital Assistant, Bibi Ashrafi, has been in charge of the female wing of the Bhagwan Dass Hospital throughout the year. There were 237 in-and 5,925 out-patients treated against 170 in-and 5,217 out-patients in 1898, and 700 operations performed against 644. His Highness the Maharaja of Bikaner proposes shortly to build a suitable Female Hospital at his capital, and to place it in the hands of a well qualified Lady Doctor.

216. A Female Medical Pupil of the Bikaner State, who passed her final examination in May, was appointed in the female ward of the Bhagwan Dass Hospital at Churu in Bikaner.

217. *Kotah.*—The Victoria Hospital at Kotah has been in charge of 2nd class Hospital Assistant Bessie Karimullah throughout the year, and has done much good work. There were 9,744 in-and out-door patients treated and 1,012 operations performed in 1899, against 7,997 in-and out-patients and 849 operations in 1898. The Female Hospital Assistant is hard-working, but a

highly qualified Superintendent should be at the head of this fine hospital, and it cannot fulfil the object for which it was intended until this appointment is made.

218. *Jaipur.*—A qualified Female Hospital Assistant has been employed in the women's wards of the Mayo Hospital, Jaipur, throughout the year. There has been an increase in the number of in-patients treated in 1899. A large number of operations have been performed on females by the Residency Surgeon, as has been done in other mixed hospitals throughout the province.

219. Female Hospital Assistant Bismillah Khanum, a pupil of the Jaipur State, passed her final examination at Agra in May last, and is employed in the female ward of this hospital in place of 2nd class Hospital Assistant Jankey Bai, who has resigned her appointment.

220. The Dhai class has been kept up throughout the year.

221. Endeavours are now being made to get a women's hospital established in Jaipur city, where it is much needed for pardahnashins.

222. *Karauli.*—The Karauli Dispensary for Women was reopened by Mrs. Bose, a qualified Hospital Assistant, on the 1st February 1899, and is now in charge of Mrs. Samuel. There were 4,027 out-door patients treated. Arrangements for 8 in-patients are being made, which will further increase the usefulness of the institution.

223. *Sirohi.*—Mrs. Ives, a qualified nurse, is still employed in the Sirohi Palace, but she has no opportunity of working among the towns-people.

224. The Jodhpur Darbar is educating a female pupil at the Agra Medical School at present.

IMPERIAL SERVICE TROOPS.

225. The three regiments of Imperial Service Cavalry, the Camel Corps, the two Transport Corps, and the two regiments of the Imperial Service Infantry, at Jodhpur, Alwar, Bikaner, Jaipur and Bharatpur, have all got well equipped hospitals, which have been regularly inspected by the Administrative Medical Officer in Rajputana. The recruits of this force have also been inspected from time to time and found to be of good physique.

INSANE.

226. There were 12 lunatics in the Ajmer Hospital during the year under report; one of these died of dysentery, one who showed no signs of improvement was transferred to the Lunatic Asylum at Delhi, 2 were cured, 5 were handed over to the safe custody of their relatives, who are, in every case, required to execute a bond for their proper care, and 3 remained in the wards at the close of the year under report. Only two of the lunatics were drug-smokers, and one suffered from epilepsy.

227. There is no Lunatic Asylum attached to the Civil Hospital, the insane are confined in the Central Jail where there is a set of six cells for their reception, and they are quite separate from the prisoners' wards.

228. In Native States Hospitals and Dispensaries there were 228 insane treated during the year under report, of whom 68 were cured, 1 relieved, 11 discharged otherwise, 18 died and 130 remaining under treatment.

229. *Jaipur.*—In Jaipur Lunatic Asylum 115 insane were treated, of whom 21 were cured, 1 relieved, 10 discharged otherwise, 10 died and 73 remaining under treatment. There was an average of 49·46 males and 11·32 females in the Asylum during the year.

230. Criminal lunatics are returned to the Police or to the Courts whence they come, and those who are not criminal are, on release, made over to the custody of their friends and relatives.

231. Two cooking places for sepoy guards have been completed.

232. *Kishangarh.*—There is no lunatic asylum at Kishangarh, and consequently the insane are sent to Jaipur at the expense of the Darbar. No insane was admitted in the Asylum in 1899.

233. *Jodhpur.*—There were 18 insane in the Jodhpur Asylum, of whom 13 were males and 5 females. Two of these died, 1 was cured and 1 discharged otherwise.

234. *Jaisalmer.*—In Jaisalmer Lunatic Asylum there was only one insane treated and cured.

235. *Sirohi.*—There is no Lunatic Asylum in this State, but only one insane patient was treated at the hospital, and was cured. A site for a Lunatic Asylum was long ago selected by the Administrative Medical Officer, Rajputana, but it has not yet been built. It is, however, hoped the Darbar will soon move in the matter.

236. *Bikaner.*—In Bikaner Lunatic Asylum 21 male and 3 female insane were treated; of these 10 males and 1 female were discharged and 11 males and 2 females remained under treatment. The general health of all the inmates is good. Several of the milder cases do a little work such as corn-grinding, opening threads, sewing, etc. A question of enlargement of the present asylum is still under the consideration of the Darbar.

237. *Bharatpur.*—The accommodation in this Asylum is for 7 males and 2 females as in the previous year. There were 24 insane treated, of whom 14 were cured, 3 made over to the custody of their friends and relatives and 7 remained under treatment. There has been no death among the insane during the year under report.

238. Of the total number treated 14 were cases of Mania, 3 of Dementia, 2 of Idiocy and Imbecility, 1 of Delirium from fever, and 4 were such as showed no symptoms of aberration of mind. The chief causes of insanity were the abuse of narcotic drugs, especially "Bhang" and "Charas." The Asylum is in excellent order, and insane are provided with clothing.

239. *Alwar.*—In Alwar Lunatic Asylum 13 insane (11 males and 2 females) were treated, of whom 3 were discharged cured, and two died. Compounds have been built for both male and female portions of the Asylum, giving them more freedom and room for exercise.

240. *Dholpur.*—There is no Lunatic Asylum in this State, but 5 insane were treated; of these 3 were cured, 1 was made over to the custody of his relatives, and 1 remained under treatment at the hospital.

241. *Karauli.*—There were 10 insane treated in the Karauli Lunatic Asylum, 9 of whom were discharged cured and 1 was made over to his friends.

242. *Kotah.*—In the Kotah Lunatic Asylum, 9 insane were treated, 1 of whom died, 1 was cured and 7 are under treatment. Of the total treated, 7 were of chronic and acute mania and 2 of chronic dementia.

243. Two insane were treated as out-patients in the Shahpura Dispensary; both of them were cured.

244. *Udaipur.*—There were 11 insane treated in the Orphanage Asylum at Udaipur, of whom 3 died and 8 are under treatment. The Residency Surgeon, Mewar, reports that a Lunatic Asylum has been constructed outside the city of Udaipur, but at present it is being used for famine refugees; however, it is hoped the building will shortly be available for insane.

245. No lunatics were treated in the Jhalawar Lunatic Asylum during the year under report.

246. Lunatic Asylums are required at Sirohi, Dholpur, Tonk, Shahpura, Bundi, Kishangarh, Pertabgarh, Banswara and Dungarpur, and endeavours are being made to get them established as soon as possible.

FAMINE,

247. On account of the failure of the monsoon rains of 1899, famine hospitals and dispensaries have been opened on all the relief works throughout the Native States of Rajputana and in Ajmer-Merwara, to supplement the ordinary medical institutions and to give medical aid to those on relief.

Table A.

State or District.	Number of Famine Relief Works.	Patients treated.		Died.
		In-door.	Out-door.	
Ajmer-Merwara	12	1,549	26,078	303
Jaipur Poor-house	1	...	230	...
Marwar	13	3,275	3,294	421
Bikaner	5	530	5,571	50
Kotah	2	386	33	57
TOTAL . .	33	5,740	35,206	831

248. The above table shows the number of in-and out-door patients treated in the famine dispensaries of the Native States of Rajputana and Ajmer-Merwara.

249. In Ajmer-Merwara there were 11 famine hospitals and 1 poor-house at Ajmer opened during the year under report, in which 1,549 in-and 26,078 out-patients were treated, of whom 303 died.

250. Dysentery and diarrhœa were prevalent among Mewaris, who took refuge in the relief works in Merwara, most of whom were in a bad state of health when admitted into hospital. Small-pox was also in an epidemic form among the people of Merwara. The largest mortality was among old people and children.

251. In Native States of Rajputana, 21 famine dispensaries and poor-houses were opened during the year under report, *viz.*, 13 in Marwar, 5 in Bikaner, 2 in Kotah and 1 in Jaipur. There were 4,191 in-and 9,128 out-door patients treated in 1899, of whom 528 died.

252. In famine dispensaries in Marwar, 6,569 patients were treated, of whom 3,275 were in-patients with 421 deaths. Of the total deaths reported, 307 died from dysentery and diarrhœa, 32 from small-pox, 28 from malarial fevers and the remaining 54 from other causes. In the Bikaner famine dispensaries and poor-house 530 in-and 5,571 out-patients were treated, of whom 50 died, most of them from bowel complaints. In the poor-house and the famine dispensary at Kotah, 419 patients were treated, 57 of whom died. A poor-house was opened at Jaipur on the 1st November 1899 in a garden adjoining the Mayo Hospital, in which 230 patients were treated.

253. Scarcity and want have for the last 8 or 10 months been wooing disease and death, and thousands of people have already perished from diarrhœa and dysentery, while many more have had the mucous coats of their digestive system so impaired by insufficient or unwholesome food and bad water that neither medicines nor diet can restore them to health, notwith-

standing that the Government of India and the Ruling Chiefs of Rajputana have done their utmost to mitigate suffering and preserve life by the opening of relief works and the establishment of poor-houses, hospitals and kitchens.

254. The appalling mortality among the milch cattle throughout the province has been a potent factor in reducing the people, and more especially the younger children, to a low condition of health and strength. This calamity has deprived them of milk and butter, which have hitherto entered largely into their diet, and left even the well-to-do, who could have met the high price of grain, to subsist on little more than dry bread. The want of bullocks for their ploughs and wells prevents villagers from cultivating the green patches of vegetables by which in ordinary years they supplement their meal, and which renders them less liable to scorbutic and bowel diseases.

255. Impure drinking water from the partially dried up tanks and wells has had much to do with the production of epidemic diarrhœa, dysentery and cholera, which have carried off so many, especially those in low condition.

256. The people who went away with their herds in search of pasture suffered very severely from these diseases on their return after they had lost their cattle and exhausted their savings. The harvests of the previous year having been light, the poor and agricultural classes had little in the way of savings, and their credit with the Banias was practically *nil*, so they had a combination of adverse circumstances to contend with, which is almost unprecedented in the history of Rajputana, and had it not been for the railway and the relief works, a great portion of the population must have perished.

257. During his inspections of people on relief works, the Administrative Medical Officer invariably found that those who had joined the relief works early remained in good health and condition, while those who wandered about with their cattle subsisting chiefly on jungle products, or who had remained too long in their villages on reduced meals in the hope of being able to tide over the evil day, suffered very severely. It is among these people that the greatest mortality has taken place, and many of them have had their digestive systems so impaired that nothing can save them. It therefore appears to the Administrative Medical Officer of great importance to start relief works early within the reach of the people when famine threatens them even if only on a very low wage.

258. In a year of famine such as this is, when ordinary food of even the most inferior quality is not available except in small quantity, the poor people are driven to quell the pangs of hunger by eating the pounded bark and even roots of certain trees, especially of *khejra* (prosopis spicigera). These are resorted to principally to give bulk to the scanty meal, and thereby to partially stay the pangs of hunger. At present small proportions of ground up *khejra* bark are in use nearly everywhere in the proportion of about one part to twenty of flour; it does not seem to impair the digestion of the labouring classes, although it has this effect if taken in excess, indeed small quantities of this bark well ground is said to aid digestion, and to make up to some extent for the want of fresh vegetables, as it contains starch and vegetable albumen. A soft stone *pilia bhata* found on the Bikaner-Marwar border of Jaipur is largely used in that part of the country to give bulk to the meagre meal. This stone is friable and easily ground into fine powder; it contains an oleaginous substance which has some nutrient qualities, and the people have found that, when finely ground and used in the proportion of one-fourth to three-fourths of flour, it does not

impair digestion; however, when it is used to excess, it soon gives rise to malnutrition, emaciation, bowel complaints, swollen feet, and other signs of defective nutrition.

259. Although *khejra* and *pilia bhata* have, when taken in small proportions, little injurious effects, many of the other barks and earthy substances used by the poorer classes to give bulk to their scanty food have done much to increase the bowel diseases, which have been so prevalent and fatal among them. The Bhils, Sansis, Bhambis and other low castes have subsisted largely on the flesh of the cattle which died, and they still have some of it preserved with salt, and although it is poor in nutrient qualities, it has kept many of them alive, and it does not produce any tendency to disease.

260. It has been found no easy task to provide qualified medical subordinates for so many extra charges, and for financial reasons a sufficient reserve could not be kept up in Native States to meet such an unusual strain. Well-selected Compounders had to be put into many of the new appointments, where their work is regularly supervised by qualified subordinates, and also by the Medical Officers, and this in most instances answers fairly well.

261. Both Medical Officers and subordinates have had extremely harassing and continuous hard work since the famine set in, and the Administrative Medical Officer has much pleasure in recording here that they have discharged their onerous and responsible duties in a manner very creditable to themselves and to their profession.

262. Proper provision has been made in all famine camps for the supply of pure drinking water and for its protection against contamination; food-supply and sanitation are receiving most particular attention. Hospital accommodation is ample, and separate huts for the segregation and treatment of cholera and small-pox patients have been provided.

AJMER;
The 13th August 1900.

D. FF. MULLEN, *M.D., Lt.-Col., I.M.S.,*
Administrative Medical Officer in Rajputana.

FORM No. XI.—*Statement showing the chief sanitary defects in the Municipalities of Ajmer-Merwara District during the year 1899.*

1	2	3	4	5	6	7
Number.	District.	Name of Municipality.	Population according to census of 1891.	Total death-rate per 1,000 of population.	Chief Sanitary defects.	Remedial measures adopted.
1	AJMER.	Ajmer Town and Suburbs .	68,843	56·05	Covered drains in Durgah Bazar, Kaisar Ganj and Naya Bazar are very defective and require saucer drains. Saucer drains are necessary round the hydrants and the platforms require raising. Birat system requires improving and the Conservancy Tramway Rolling stock require renewing.	The conservancy carts are under repair and being renewed, but the Municipality is in a very impoverished condition.
2		Nasirabad Town (Cantonment).	21,710	44·08	Some defect as regards bazar drainage being swept into a tank to the south of bazar on approach of rains. No money to remedy this as cost would be much. Conservancy establishment is to be increased in the following year in any case. Improved system of conservancy still under consideration.	Fresh scheme of taxes under consideration to meet cost of improved conservancy system.
3		Kekri Town . . .	7,100	61·69	This year a new bridge was built towards the Deogaon gate to remove the defects of drainage at a cost of R72-6-6. Several defects were pointed out by the Civil Surgeon, and they will be remedied as soon as money is available.	Metalled roads are being gradually made. *Kutcha* drains are repaired and cleaned in the bye-lanes during rains. Measures are being taken by the Committee to fill up the Jamaria pond situated in the lower portion of the Kekri Town behind the Katta, as suggested by the Civil Surgeon, Ajmer, for the public safety.
4	MERWARA.	Beawar Town . . .	20,978	54·68	Deep drainage fairly satisfactory. Superficial drainage of street and lanes in certain quarters defective, the drains being covered which is an impediment to proper cleaning. At other places the road level has reached the very top of these drains, so that rain and other water cannot find its way into the drains, but flows over the surface of these. Water insufficient and bad. Certain Baories being unprotected from contamination. Domestic cleaning, though not very satisfactory, yet is better than before. The old private latrines in houses are on a very defective plan. Outlet of house unsatisfactory as there is no system of drains for smaller lanes, etc.	For public latrines, street sweepings, cesspools, urinaries, etc., iron carts and barrels introduced. Wells cleaned out and wherever possible covered with wooden lattice. More cesspools allowed now for collection and removal of foul water of houses. Sanitary staff increased. Public latrine stone-paved. Iron latrines introduced.

ANNUAL STATEMENT I.—*Showing particulars of vaccination in Rajputana during the year 1899-1900.*

No.	Name of State.	Population of district according to computation of 1891.	Average population per square mile.	Average number of vaccinators employed throughout the season.	Total number of persons vaccinated.			Average number of persons vaccinated by each vaccinator.	Primary vaccination.				Re-vaccination.		Percentage of successful cases.		Persons successfully vaccinated per thousand of population.	Average annual number of persons successfully vaccinated during previous five years.		Average annual number of deaths from small-pox during previous five years.	
					Males.	Females.	Total.		Total.	Successful.			Total.	Successful.	Primary.	Re-vaccination.		Number.	Ratio per thousand.	Number.	Ratio per thousand.

																			Add on account of District Lockups .	1,607	
																			GRAND TOTAL .	22,718	

When prisoners of different classes are confined in the same jail, the expenditure on establishment and other items with which all are concerned should be divided over all. The cost per head under any item of expenditure is to be calculated on prisoners actually concerned in it or contributing to it, and not otherwise.

Hospital charges, (column 7) should include rations and also the cost of medicines supplied both from the bazar and the Medical Store Depôts. In this series (Financial) annas and pies are only to be shown where there are columns for them.

STATEMENT XII (FINANCIAL).—*Showing the net cash earnings of convicts sentenced to labour in the Central Jail at Ajmer during the year 1899.*

1	2	3	4	5	6	7	8	9	10	11	12	13	14
Serial No.	NAME OF JAIL.	Average number sentenced to labour.	Average number employed on Jail manufactures.	Cash balance on manufacturing account in hand on the 1st January 1899.	Cash drawn on manufacturing account during the year.	Total.	Paid into Treasury on manufacturing account.	Cash balance in hand on manufacturing account on the 31st December 1899.	Total.	Cash earnings (being total of column 10 less total of column 7).	Average earnings per head calculated on column 3.	Average earnings per head calculated on column 4.	REMARKS.
				R a. p.	R a. p.	R a. p.	R a. p.	R a. p.	R a. p.	R a. p.	R a. p.	R a. p.

FROM

THE AGENT TO THE GOVERNOR-GENERAL,
RAJPUTANA,

To

THE SECRETARY TO THE GOVERNMENT OF INDIA,
FOREIGN DEPARTMENT.

Dated ABU, *the 26th October 1901.*

SIR,

IN continuation of the correspondence ending with Foreign Department letter No. 644-I. A., dated the 11th February 1901, I have the honour to forward in print the report on Sanitation, Dispensaries and Jails in Rajputana for the year 1900, and on Vaccination for 1900-1901, submitted by Lieutenant-Colonel D. ffrench Mullen, M.D., I.M.S., Residency Surgeon and the Chief Medical Officer in Rajputana, together with my review of his report.

I have the honour to be,

Sir,

Your most obedient Servant,

A. P. THORNTON, *Lt.-Col.*,
Offg. Agent to the Governor-General, Rajputana.

REVIEW.

Review of the Annual Report on the Sanitation, Dispensaries and Jails of Rajputana for the year 1900, and on Vaccination for the official year 1900-1901.

1. The year under review was chiefly remarkable for an unusually heavy rainfall succeeded by a season of extreme unhealthiness. The harvests generally were good, but the people, enfeebled as they were by past privations, fell an easy prey to the epidemics of cholera, malarial fever, dysentery, and small-pox that ravaged the province during the autumn of 1900. The mortality was exceptionally severe, statistics for Ajmer-Merwara showing a death-rate of 119·97 per mille as compared with 33·21 per mille in the previous year, while the mortality in the States was equally abnormal.

2. In consequence of the famine conditions of the previous year, the birth-rate in Ajmer-Merwara declined considerably, a similarly marked tendency being observable in the figures returned by most of the various Native States.

3. There was a falling-off in the number of vaccinations performed, which is attributed to the abnormal mortality and the diminished birth-rate noted above.

4. The Honourable the Agent to the Governor-General regrets to observe that the subjects of sanitation and the registration of vital statistics at head-quarter stations do not receive the attention they deserve in certain of the Native States, and he trusts that medical officers will do their best to effect some improvement in this direction during the current year.

5. Only one new dispensary, a Female Hospital, was opened at Jhalrapatan during the year under review, but the popularity of the existing institutions is shown by an increase of nearly 25 per cent. in the number of patients treated, as compared with the previous year. There was consequently a considerable increase in expenditure.

6. It is a matter for satisfaction that steady progress is being made in Jail management in most of the Native States of Rajputana, and that efforts continue to be made to remedy the insanitary condition of some of these institutions, which is due to defective water and food supply, want of proper drainage and overcrowding. The Jails of Banswara, Dungarpur, Bundi, and Shapura are noticed as being the most backward in this respect.

7. Bubonic plague made its appearance in January 1901, being imported from Bombay. There was a severe outbreak of the disease in the villages of Bali and Sewari in Marwar, which was, however, promptly checked and completely stamped out by the beginning of May.

8. Good results continue to be achieved by the Female Hospitals. In the late Miss Adams, the able Superintendent of the Jaswant Hospital at Jodhpur, whose death is deeply deplored, the Agency has lost a most popular and energetic worker.

A. P. THORNTON, *Lt.-Col.*,
Offg. Agent to the Governor-General, Rajputana.

REPORT

ON

SANITATION, DISPENSARIES, AND JAILS IN RAJPUTANA FOR 1900,

AND ON

VACCINATION FOR THE YEAR 1900-1901.

SECTION I.—SANITATION AND VACCINATION.

METEOROLOGY AND ITS RELATION TO FOOD-SUPPLY.

Rainfall of Ajmer and Beawar.

1. During the year under report 25·64 inches of rain were registered in Ajmer as against 10·00 inches in 1899; the average of previous six years was 20·70 inches.

In Beawar 23·47 inches fell, the average for the same period being 17·23; only 5·10 inches fell in 1899.

Rainfall of Native States.

2. In many of the Native States of Rajputana the rainfall was far above the average. The kharif crops gave a good yield, the autumnal rains were prolonged and the rabi crops were in consequence excellent.

Registration of Births in Ajmer-Merwara.

3. There were 7,958 births registered in Ajmer-Merwara in 1900 against 17,032 in 1899 and 16,122 in 1898. Of the total births registered 4,402 were males and 3,556 females, and the birth-rate per mille was 14·67 against 31·40 in the previous year and 29·73 in 1898. The registration of births is still imperfect.

Registration of Deaths in Ajmer-Merwara.

4. The death-rate in Ajmer-Merwara increased from 33·21 per mille in 1899 to 119·97 per thousand in 1900. This increased mortality was due in a large measure to famine, which prevailed all through the districts, also to severe epidemics of cholera, small-pox, malarial fever and dysentery and diarrhœa which appeared in an unusually fatal form after a late and heavy rainfall.

Births and Deaths of last 10 years compared.

5. According to the birth and death returns for 1891-1900, there were 146,356 births and 200,970 deaths, showing an excess of deaths over births of 54,614. The Census Returns, however, show an actual decrease of 66,028, so that there is a balance of 11,414 deaths unaccounted for in the mortality returns for the decennial period, and this does not take account of the deaths among famine immigrants from Native States in 1900—*vide* table 1 below:—

TABLE 1.

District.	Population 1901.			Population 1891.			Variation 1881-91 + or —.		Variation 1891-1901. + or —.		Remarks.
	Males.	Females.	Total.	Males.	Females.	Total.	Number.	Per cent.	Number.	Per cent.	
1	2	3	4	5	6	7	8	9	10	11	12
Ajmer .	192,929	173,871	366,800	223,547	198,812	422,359	+63,071	+17·55	—55,559	—13·15	
Merwara	57,792	51,738	109,530	64,778	55,221	119,999	+18,565	+18·30	—10,469	—8·72	
Total .	250,721	225,609	476,330	288,325	254,033	542,358	+81,636	+17·72	-66,028	—12·17	
CITY. Ajmer .	40,623	35,136	75,759	37,985	30,858	68,843	+20,108	+ 41·26	+6,916	+10·05	

6. The deficiency in death registration may be accounted for partly by emigration, but there is no doubt that it is in a large measure due to

non-registration of deaths during the famine period, especially when people deserted the famine camps as soon as cholera appeared, and many of the wanderers died by the wayside in consequence.

7. For the period 1891-99 the births exceeded the deaths registered by 2,495, or a yearly average increase of 277.

The average yearly mortality for the same period was 15,100.

8. The mortality of the famine year 1900 was 65,067. The excess beyond the average, *viz.*, 49,967, may be taken as the minimum number whose deaths were due either directly or indirectly to famine and its attendant diseases. This works out to an average of 10·4 of the population according to the Census of 1891.

9. Nine per cent. of the total mortality was registered between the ages of five and ten years in 1900 against 4 per cent. in the previous year, and the highest number of fatal cases was reported among children between the ages of one and five years.

10. In all the 23 circles of registration deaths exceeded births in the Ajmer-Merwara District.

Deaths according to diseases in Ajmer Division.

11. There was a considerable increase in the number of deaths from all causes as compared with the previous year, with the exception of injuries which shows a slight decrease, the total increase being 47,054.

12. The mortality from small-pox shows an increase of 1,648 as compared with the previous year, the figures for 1899 and 1900 being 962 and 2,610, respectively. Out of the total number of deaths from this disease 688 occurred among children less than a year old and 1,752 among those under ten years of age. The total mortality from small-pox was 2,181 in Ajmer district and 429 in Merwara.

TABLE 2.—*Births and Deaths in Native States.*

NOTE.—The information required for this table cannot be obtained in full from Jaisalmer. The total, therefore, of column 14 does not agree with the totals of the seven preceding columns.

Registration of Births and Deaths in Native States.

13. Registration has been attempted in 18 Native States as in the previous year, but so far with unsatisfactory results. At the time of the Famine Commission in Ajmer in February last an attempt was made to get statistics similar to these supplied to the Commission from the Ajmer-Merwara District

but the universal reply was "information not available." Even in the capital towns of the most advanced Native States the collection of vital statistics is not properly supervised and checked. The only remedy for this is to appoint a special officer for the purpose under the direct authority of the Agency and Residency Surgeons.

14. At Ajmer there is an Assistant Health Officer under the Civil Surgeon who investigates personally every death in the city and suburbs without causing the slightest friction, and the same thing can be done in Native States capitals, if care is taken in selecting a tactful person for the purpose.

15. During the year under report both cholera and small-pox prevailed in a severe epidemic form in all Native States from which returns have been received. There were 19,943 deaths reported from cholera as against 1 in the previous year and 3,051 deaths from small-pox against 2,061 in 1899.

16. There has been a considerable increase in deaths from fevers and also from dysentery and diarrhœa in the States of Rajputana during the year under report, *viz.*, 65,262 and 18,965 against 28,272 and 4,494 in 1899. Deaths from snake-bite fell from 129 to 74 in 1900.

17. The birth-rate in the cities ranged from 4·21 per mille of population in Bundi to 34·62 in Kotah, and in rural circles from 1·35 per thousand of population in Jhalawar State to 23·46 in Pertabgarh State. The death-rate varied from 27·50 per mille of population in Dholpur city to 454·33 in Banswara city, and in rural circles from 5·11 per mille in Dholpur State to 261·62 in Pertabgarh State.

Births and Deaths in Native States during the last 10 years.

18. Table 3 below gives details of births and deaths registered during the last 10 years (1891-1900) in the Native States of Rajputana with the average birth and death rates, calculated on the basis of 1,000 persons living.

TABLE 8.

Cholera.

19. *Ajmer-Merwara.*—During the year under report cholera broke out in an epidemic form in the whole of the Ajmer-Merwara District as well as in some of the famine relief works on the Kekri-Sawar Road in Ajmer and at Mukrera and Sarmalia in Merwara. It appeared in April and ceased at the end of September.

20. There were 5,621 cases of cholera reported from Ajmer-Merwara, of which 4,841 proved fatal, against 3 cases and 1 death in the previous year.

21. In Ajmer the first sufferer was an old woman aged 60, who was removed from the train on 12th April. She travelled from Ujjain and got attacked on the way to Ajmer and died on the 13th. When it broke out in the Marwar camp in Ajmer behind the Dâk Bungalow on the 18th April, isolation huts were erected at once on a site behind the Poor House to segregate the sufferers, and all necessary precautions were taken. In Ajmer town 945 cases with 788 deaths were reported from the 12th April to the 26th September 1900. Two cases of cholera among under-trial prisoners occurred in the Central Jail; both of them recovered.

22. In Merwara cholera first showed in April and continued till September. There were 1,540 cases and 1,253 deaths reported during the year.

23. All necessary precautions were taken throughout the Ajmer-Merwara District in the way of sanitation and disinfection of wells to stop the disease, and cholera pills were distributed in all villages.

24. *Native States.*—During the year 50,309 cases of cholera were reported from Native States, 28,719 of which proved fatal; against 846 cases and 497 deaths in the previous year. Cholera was epidemic in Marwar, Jaisalmer, Bikaner and Jaipur during the last two months of 1899 and extended throughout Rajputana. It was most prevalent during the months of April, May, June, July and August, 1900; there was a considerable decline in September and it disappeared in October.

25. The disease was of a very severe type, and it was supposed to have originated from the use of bad grain and unwholesome food and by an influx of starving mendicants and famine stricken people in search of food, labour or charity. Marwar, Jaipur, Jaisalmer, Mewar, Kotah and Sirohi suffered most severely.

26. Three hundred and seventy-three cases of cholera occurred in the Jails of Native States, 216 of which proved fatal, *viz.*, 164 cases and 117 deaths in the Dungarpur Jail, 74 cases and 38 deaths in the Jodhpur Jail, 39 cases and 4 deaths in the Pertabgarh Jail, 23 cases and 8 deaths in the Shahpura Jail, 21 cases and 8 deaths in the Jaisalmer Jail, 18 cases in the Banswara Jail all of which were fatal, 18 cases and 11 deaths in the Tonk Jail, 9 cases and 7 deaths in the Udaipur Jail, 4 cases and 2 deaths in the Jhalrapatan Jail, 2 cases and 2 deaths in the Jaipur Jail, and 1 case in Bundi which proved fatal.

27. Everywhere special establishments were organized for the supply of medical relief, and remedies were widely distributed through the agency of District officials, police and vaccinators. Wells were disinfected with permanganate of potash.

28. A cholera map is attached which will show the districts affected, the dates of first and last cases, the death-rate per 10,000 of population and the position of all the dispensary towns.

SANITATION.

Ajmer Division.

29. *Ajmer Division.*—The Foy Sagar filled during the rainy season and supplies sufficient drinking water to the people of the city and suburbs of Ajmer, and consequently the supply from Budha Pushkar Lake has been discontinued.

30. *Sanitary tramway.*—The sanitary tramway continues to be worked satisfactorily at Ajmer and the trenching ground is well looked after. The conservancy carts are in bad repair. For want of funds only a few were repaired. Some private privies have been improved. Covered drains in Dargah, Naya Bazar and Kaisargunj are very defective, saucer drains are required, for which an estimate has been prepared. The huts for a plague observation camp near the Railway station are kept in good order.

Native States.

31. In several of the Native States the Medical Officers do not take an active part in the work of sanitation and the registration of vital

statistics of the Head-quarter stations to which they are accredited, and these important matters are entirely in the hands of Native Officials with unsatisfactory results. Where there is a Municipality the Agency Surgeon should be a leading member of it, and take an active interest in its work. At present Alwar, Jodhpur, Bikaner and Bharatpur are the only places where this is done.

Jodhpur. 32. The sanitary steam tramway has worked satisfactorily at Jodhpur and done much to improve the sanitary condition of both the city and suburbs. Lieutenant-Colonel Crofts, I. M. S., has introduced a system of public urinals, made at a slight cost, into the city, and these are now in general use. An Hospital Assistant has charge of the Sanitary Department in Marwar.

Jaipur. 33. The city is well drained and there is a good conservancy system in force which has greatly improved the sanitary condition of both the city and suburbs. The Residency Surgeon reports that the Senior Sanitary Inspector did a great deal of valuable work in the city of Jaipur during the cholera epidemic in addition to his inspection duties. A second Sanitary Inspector was appointed in September.

Alwar. 34. There is a good conservancy system in force under the Municipal Committee which is presided over by the Agency Surgeon. Lieutenant-Colonel Harington at Alwar took an active interest in Municipal work, and inspired the native officials with some of his energy.

35. For various unavoidable reasons the tours of most of the Agency Surgeons were curtailed and the inspection of outlying Dispensaries was not as complete as it should be. This subject of regular inspection of Dispensaries and Vaccination is engaging the earnest attention of the Residency Surgeon and Chief Medical Officer, and steps will be taken to ensure more frequent inspections in future.

VACCINATION.

Vaccination. 36. *Ajmer-Merwara.*—In Ajmer-Merwara during the year under report there was a considerable decrease in the total number operated on, in the number of successful cases, in the percentage of success, and in the average number of operations performed by each Vaccinator. This was due to the continued famine which weakened the condition of people, especially children, who could not consequently be operated on, and the famine also affected the birth-rate, especially among the poorer population. The cost of each successful case rose from 16 to 42 pies, which is chiefly due to the entertainment of an additional Vaccinator, as sanctioned by the Government of India, and to a very large decrease in the number of children vaccinated.

37. One Native Superintendent and 14 Vaccinators have been employed in this division, one more than in the previous year.

38. Nineteen and-a-half per thousand of population were successfully vaccinated during the year against 49·32 per mille in 1899-1900.

39. The Native Superintendent in Ajmer-Merwara inspected 399 villages and saw 6,030 children, against 10,614 in the previous year.

Vaccination in Native States. 40. *Native States.*—The primary successful vaccinations in Native States fell from 344,447 in 1899-1900 to 264,880 in the year under report, Jodhpur showing the greatest decrease. The fall is attributable to the very heavy mortality amongst children on account of the famine, epidemic diseases which followed in its train and to the diminished birth-rate.

Number of Vaccinators and work done. 41. There were 213 Vaccinators employed against 232 in the previous year, Marwar alone having decreased the number of Vaccinators employed by 15. Jodhpur was over-supplied with Vaccinators and it is expected that the same amount of work will be done in the future, by a better distribution of Vaccinators and mounting them on camels to enable them to cover more quickly the long distances between the villages. There was also a reduction of 3 Vaccinators in Mewar, 1 in Jaipur and 1 in Kotah, and 1 additional was engaged in the Jhalawar State.

42. The average number of vaccinations performed by each Vaccinator fell from 1,551 in 1899-1900 to 1,343 in 1900-1901, and the work per Vaccinator varied in different States from 3,070 operations in Bharatpur to 65 in Bundi.

The average cost of each successful case rose from 17 to 22 pies.

43. The Returns from Native States show a falling off in numbers for last season, mainly in Marwar, Bikaner, Mewar and Kotah and in a less degree in Sirohi and Jaisalmer. In these States infant mortality and sickness due to famine and its attendant diseases were the main cause of the falling off. Many of the survivors from the famine were in a too debilitated state to be vaccinated, and the wave of severe malarial fever which swept through Rajputana in the cold weather of 1900, affected all classes alike, and in many cases the Vaccinators themselves were incapacitated from work for weeks at a time.

44. Re-vaccination rose from 10,410 to 17,707, and these were mostly performed in Jaipur, Marwar, Bikaner and Bharatpur.

Expenditure on vaccination.

45. The expenditure on vaccination in Native States rose from Rs. 31,172-7-11 in the previous year to Rs. 31,535-4-9 in 1900-1901. The average cost of each successful vaccination in the different States varied from 7 pies in Bharatpur to 212 pies in Bundi. The high cost of vaccination in Bundi is due to the small number vaccinated and the total absence of supervision as there is no Medical Officer in the State.

Lymph.

46. Buffalo-calf lymph was used as much as possible, but the great mortality among cattle on account of famine hindered the work in many places, and humanized lymph had to be substituted. Lymph is kept up by arm to arm vaccination of a few healthy children at regular intervals.

47. Vaccination work has been fairly started in Kushalgarh, Pertabgarh, Banswara and Kishengarh. The want of proper supervision in these places has been the main cause of the great backwardness, but it is hoped vaccination will now receive more attention, and that Residency Surgeons will give some time to its supervision in their secondary charges. The vaccination work in Shahpura and Tonk is also backward, there being no Medical Officer to supervise.

Inspection and verification of work.

48. The Residency Surgeon, Jaipur, inspected 410 towns and villages and saw 10,370 children who had been successfully vaccinated; the Agency Surgeon, Eastern Rajputana States, inspected 228 towns and villages and saw 12,723 children who had been successfully vaccinated; the Civil Surgeon, Bikaner, inspected 87 towns and villages and saw 4,932 children who had been successfully vaccinated; the Agency Surgeon, Alwar, inspected 488 towns and villages and saw 4,487 children who had been successfully vaccinated; the Agency Surgeon, Kotah and Jhalawar, inspected 615 towns and villages and saw 1,477 children who had been successfully vaccinated; the Residency Surgeon, Mewar, inspected only 4 towns and villages and saw 785 children who had been successfully vaccinated, as he could not go out on tour of inspection owing to the illness of the Maharaj Kunwar at Udaipur; the Residency Surgeon, Western Rajputana States, inspected 55 towns and villages and saw 558 children who had been successfully vaccinated. He could not devote sufficient time to the inspection of vaccination during the cold weather on account of the outbreak of plague at Bali and Sewari in Marwar.

SECTION II.—DISPENSARIES.

Number of Dispensaries.

49. There are now 166 Hospitals and Dispensaries in Rajputana against 165 in the previous year, and besides these there are 6 Mission and 6 Railway Hospitals open for the treatment of patients. Famine dispensaries were opened on Famine relief works all over the province.

50. In Ajmer-Merwara no dispensary has changed its class during the year under report, while the number of institutions (7) remains the same as in 1899. The Agency and Salt Dispensaries also remained the same as before, *viz.*, 11.

51. In Native States there are now 148 Hospitals and Dispensaries in Rajputana against 147 in the previous year. The new Crofts Female Hospital was opened at Jhalrapatan on the 22nd August 1900.

Progress in Hospitals and Dispensaries.

52. The new building for the Behror Dispensary in Alwar has been completed. The Victoria Hospital at Bharatpur has had some important improvements carried out in it during the year, and it is now largely resorted to by patients from the surrounding districts.

53. Many improvements have been made in outlying dispensaries, and the progress in hospitals and dispensaries may be considered satisfactory notwithstanding the difficulties of the year.

54. In Ajmer-Merwara there were 352 (26 per cent.) more in-patients treated during the year under report, the increase being chiefly shown in the Beawar and Todgarh Dispensaries, which is due to famine attended with cholera and a severe epidemic of malarial fevers, and also to the transfer of famine patients to the Beawar Dispensary from the Poor House which was abolished in the middle of October 1900. Medical relief.

55. The daily number of sick, the number of deaths and the percentage of deaths to in-door cases treated were necessarily large under the circumstances mentioned in the above paragraph. There was also an increase in the number of out-patients treated in the Merwara dispensaries.

56. In Agency and Salt Dispensaries 618 more in-patients were treated in 1900 than in 1899, *viz.*, 318 more in the Ajmer Police Hospital in which all sick constables posted in both Ajmer and Merwara districts are treated, and 90 more in the Kotra Agency Hospital where a large number of paupers coming from the adjacent Native States on account of scarcity was admitted.

57. In the hospitals and dispensaries supported by Native States in Rajputana, 24,130 in-door and 1,231,286 out-patients were treated against 17,328 in-door and 999,263 out-door patients in the previous year. The increase of 23 per cent. is due to the continued famine and also to cholera and a severe epidemic of malarial fevers.

58. *Malarial fevers.*—An extensive epidemic of malarial fevers prevailed throughout Rajputana during the months of September, October, November and December 1900. In anticipation of its onset large quantities of quinine were provided and distributed. The beneficial results of quinine were thoroughly appreciated by the people, and prejudice against its use died away altogether after a short experience of the benefits derived from its use. Causes of admissions and deaths.

59. In Ajmer-Merwara the above affections gave rise to 28 per cent. of the total treated against 11 per cent. in the previous year, but the death-rate was the same as in the previous year, *viz.*, 7 per cent. The percentage of cases treated for cholera and dysentery and diarrhœa shows an increase of 0·95 and 5, respectively, as compared with last year, while the other causes of admission show a decrease. The deaths from cholera and bowel diseases were 3 per cent. and 39 per cent., respectively, against nothing and 38 per cent. in the previous year.

60. In Agency and Salt Revenue Dispensaries the admissions for malarial fevers and spleen, cholera, dysentery and diarrhœa rose from 26, nothing and 6 per cent., respectively, of total treated in 1899 to 37, 0·31 and 10 per cent. in 1900, and the death-rate rose considerably from nothing to 11 and 45 per cent. from fever and cholera, but the mortality for dysentery and diarrhœa fell from 38 per cent. to 8 per cent. during the year.

61. In Native States malarial fever was 9 per cent. more frequent than in 1899, but the mortality was lower by 2 per cent. than in the previous year. Cholera and dysentery and diarrhœa caused 1 per cent. and 8 per cent. of the total number of cases against ·02 per cent. and 5 per cent. in 1899, and 16 per cent. and 36 per cent. of the death-rate against 0·74 per cent. and 25 per cent. recorded for the previous year. The percentages of the other causes of admissions show a decrease.

62. *Leprosy.*—There were 564 cases of leprosy seen in Rajputana during the year under report against 625 in the previous year and 638 in 1898. This disease again shows a decrease, notwithstanding the increase in dispensaries and a great increase in attendance. It shows that this disease has become less prevalent in this part of the country although no specific treatment has yet been found.

63. *Small-pox.*—Small-pox prevailed in an epidemic form in Ajmer-Merwara as well as in the Native States of Rajputana during the year under report. There were 2,610 deaths in Ajmer-Merwara from this disease and 3,051 in the Native States, against 962 in the Ajmer Division and 2,601 in the Native States in 1899. The disease was epidemic in Ajmer-Merwara and in the Native States from January to April 1900. Much re-vaccination was done in Native States, and this greatly reduced the severity of the outbreak.

64. *Snake-poisoning.*—Calmette's antivenine is kept in stock and used for the treatment of snake-bite when opportunity offers for testing its value in virulent snake-poisoning.

65. *Bubonic Plague.*—In April 1900, 2 suspicious cases of bubonic plague were imported from infected areas into Rajputana; both of them proved fatal. From May 1900 to the end of the year no case of bubonic plague either imported or indigenous was detected.

66. The following report of the recent epidemic which appeared in Bali and Sewari, two Marwar villages, is condensed from the interesting report by Captain Norman MacLeod, I.M.S., Special Plague Officer, who was in medical charge of the operations to stamp out the disease. Colonel Crofts, I.M.S., who was in medical charge at the beginning of the epidemic, had to return to Jodhpur owing to the illness of His Highness the Maharaja of Jodhpur. It may be here stated that His Highness gave every assistance, both in money and Imperial Service Troops, to the Medical Officer in his arduous duties, and consented to be inoculated as an example to his subjects.

67. Bali is a village of 5,000 inhabitants and is situated 6 miles from Falna Railway Station on the Rajputana-Malwa Railway. Bali contains a large number of banias who carry on business in Bombay and there is constant intercourse between the two places.

68. On the 25th January 1901 a Bania named Dulichand arrived from Bombay. He walked about the village during the day; but was found dead next morning. In the month of February 38 new cases of plague were reported to have occurred at Bali including the Segregation Camp, of which 22 proved fatal. In March 69 cases and 53 deaths and in April 15 cases and 19 deaths, total 123 cases and 95 deaths up to the 15th April 1901, when it totally ceased in this village.

69. Plague also broke out at Sewari, which is about 8 miles distant from Bali, in March 1901, and totally disappeared on the 15th May 1901. In March there were 92 cases and 56 deaths, in April 27 cases and 21 deaths, and in May 1 case and 2 deaths, total 120 cases and 79 deaths.

70. There were 4,408 inoculations done at Bali and 2,412 at Sewari, a grand total of 6,820 inoculations; of which 16 were subsequently attacked with plague and 8 died.

71. Haffkine's serum was used for inoculation in three different doses, and all were inoculated except women advanced in pregnancy. The evidence in favour of its efficacy is strong though not conclusive.

Operations.

72. In Ajmer-Merwara 2,586 operations were performed against 3,197 in previous year, with 9 against 5 deaths, showing a decrease of 611 in all. This decrease is attributed to the prevalence of famine and epidemic fever all over the district, owing to which a small number of cases for operation came to dispensaries.

73. Of the operations performed in this division, 685 were done in the Ajmer General Hospital, 1,224 in Beawar, 218 in Todgarh, 118 in Kekri, 186 in Pisangan, 83 in Deolia and 72 in Ramsar.

74. In Ajmer 38 extractions of the lens for cataract were performed, 2 successful litholapaxies and 6 lithotomies with 1 death. In Beawar 8 extractions of the lens for cataract were done, 5 successful litholapaxies and 3 successful lithotomies.

75. There were 60,594 operations performed in the States of Rajputana with 90 deaths, against 62,213 operations with 55 deaths in the previous year. This decrease in operations is due to scarcity, outbreak of cholera and unusual prevalence of malarial fever throughout Rajputana. Of these operations 819 were extractions of the lens for cataract, 79 litholapaxies, 54 lithotomies and 194 amputations, against 1,867, 118, 76 and 169, respectively, in 1899.

76. In Native States, as hitherto, Jaipur stands well ahead of all others in Surgery. Of the total operations performed, 12,796 were done in Jaipur, Kishengarh and Sambhar, 8,644 in Jodhpur, Sirohi and Jaisalmer, 7,731 in Bikaner, 7,422 in Udaipur, Pertabgarh and Banswara, 6,569 in Kotah and Jhalawar, 6,540 in Bharatpur, Dholpur and Karauli, and 5,765 in Alwar.

77. Lieutenant-Colonel P. D. Pank's ophthalmic and stone operations, in the Mayo Hospital, Jaipur, far exceeded in numbers those of any other Medical

Officer in Rajputana, and the late Miss Adams in the Jaswant Hospital, Jodhpur, headed the list in Women's Hospitals.

TABLE 5 —*Selected List of Surgical Operations showing the number of each performed by individual officers in Rajputana during the year 1900.*

NAME OF OPERATOR.	Period on duty.	Excision of tumours (all kinds).	Excision of joints (Partial or complete).	Operations on bones.	AMPUTATIONS		Extraction of lens. Expenditure on Hospitals and Dispensaries.

78. In the Ajmer Division the expenditure on hospitals and dispensaries rose from Rs. 11,882 in 1899 to Rs. 13,497 in the year under report. The increase was mainly due to the appointment of an Assistant Surgeon in the Ajmer General Hospital on a salary of Rs. 100 per mensem, and to the grant of grain compensation to the staff during the recent famine. There was also an increase in expenditure under all other heads with the exception of "Buildings," which shows a decrease of Rs. 156 as compared with last year.

79. The subscriptions from Europeans as well as from Natives decreased to Rs. 120 and Rs. 575 against Rs. 176 and Rs. 1,008 in 1899 in the Ajmer General Hospital. Owing to the prevalence of famine the full amount of subscriptions due from villagers and other natives was not recovered.

80. The statement of charges of the Ajmer General Hospital showed an increase of expenditure at the end of the year, and consequently the debit balance against this hospital increased to Rs. 2,543-13-4 at the end of the year.

81. The cost of each case treated was 36 against 40 pies in the previous year, and this was due to the decrease in expenditure on buildings and repairs. The cost per diet per diem was the same as in the previous year.

82. The financial position of the Kekri and Pisangan Dispensaries has improved, and all the others have a balance to credit. The invested capital remained as before, *viz.*, Rs. 8,500.

83. There was an increase in expenditure in Beawar and Todgarh Dispensaries on diet, which is due to the large number of in-patients being treated in the dispensary. The cash balance of the Beawar Dispensary at the end of the year

was Rs. 154-3-1, and the debit on the Todgarh Dispensary has been reduced during the year under report from Rs. 391-5-1 to Rs. 376-1-3.

84. The expenditure on Abu and Abu Road Dispensaries rose from Rs. 2,055 in 1899 to Rs. 2,088 in 1900, and the subscriptions collected at Abu fell from Rs. 690 to Rs. 593. The invested capital remained the same as in the previous year.

85. The expenditure on Political Agency and Salt Revenue Dispensaries rose from Rs. 10,635 in 1899 to Rs. 10,639 in 1900. This increase is partly attributed to the payment of salary of Hospital Assistants attached to the Agency Hospital at Kotra and the Residency Hospital at Jodhpur and partly to increased expenditure on diet.

86. The expenditure on hospitals and dispensaries in the Native States of Rajputana rose from Rs. 3,02,217 to Rs. 3,26,458, and the increase was mainly due to increased attendance and also greater cost of diets for in-patients.

87. The expenditure on Europe medicines rose from Rs. 70,918 to Rs. 76,493, the expenditure on diets from Rs. 31,072 to Rs. 47,987, and on Bazar Medicines from Rs. 7,399 to Rs. 9,092. The expenditure on buildings and repairs fell from Rs. 11,839 in 1899 to Rs. 4,940 in 1900, and hence the cost of each case treated fell from 57 to 50 pies.

88. Of the total sum expended on these institutions Rs. 71,542 were expended in Jaipur, Rs. 49,042 in Jodhpur, Rs. 35,354 in Kotah, Rs. 30,660 in Bikaner, Rs. 28,443 in Udaipur, Rs. 28,143 in Alwar, Rs. 25,055 in Bharatpur, Rs. 10,603 in Jhalawar, Rs. 7,659 in Tonk, Rs. 7,176 in Dholpur, Rs. 4,731 in Karauli, Rs. 3,703 in Bundi, Rs. 3,352 in Sirohi, Rs. 2,995 in Jaisalmer, Rs. 2,813 in Kishengarh, Rs. 1,930 in Shahpura, Rs. 1,897 in Banswara, Rs. 1,424 in Dungarpur, Rs. 1,344 in Pertabgarh and Rs. 679 in Kushalgarh.

Mission Hospitals.

89. Much good work has been done during the year in these hospitals, which are located at Ajmer, Jodhpur, Nasirabad, Udaipur and Jaipur.

90. During the year under report 18,195 new out-door patients were treated in the Mission Hospital at Ajmer, the old cases treated numbered 66,097, the in-patients 267, and the operations 1,303, of which 37 have been described as major operations according to the old nomenclature of diseases. In the Women's Hospital at Ajmer 5,130 new cases were treated, the old cases or re-attendance numbered 9,102, the in-patients 311, and the operations 299, of which 17 have been described as major operations. Besides 2,430 visits were paid by the hospital staff to patients at their houses and medicines and medical advice given. In Jodhpur 8,686 new out-patients were treated, the re-attendance or old cases numbered 33,266 and the in-door patients 85, there were 976 operations performed, of which 74 were major operations. In Nasirabad 12,056 new out-door cases were treated, the old cases or re-attendance numbered 33,571, the in-patients 2,376, and the operations 926 of which 46 have been described as major operations. In Udaipur 21,386 new out-door cases were treated, the old cases or re-attendance numbered 46,122, the in-patients 331, and the operations 1,963 of which 40 were major operations. In Jaipur 1,069 new out-door patients were treated, the re-attendance or old cases numbered 2,246, the in-patients 4, and the operations 37, all minor. Besides 1,480 visits were paid by the Hospital Staff to people at their houses.

Railway Hospitals.

91. In the Railway Hospitals at Ajmer, Bandikui, Phulera, Sojat Road and Abu Road, 70,405 patients were treated during the year under report, *viz.*, 35,321 at Bandikui, 17,505 at Sojat Road, 10,219 at Ajmer, 5,040 at Abu Road and 2,320 at Phulera.

Inspections.

92. The Residency Surgeon and Chief Medical Officer inspected all the head-quarters Stations of Residencies and Political Agencies of Rajputana and also Bundi and Dungarpur. He made frequent inspections of the plague prevention arrangements on the Railway Stations of Rajputana-Malwa Railway and Jodhpur-Bikaner and Udaipur-Chitor lines.

Sale of Quinine.

93. During the year 1900, quinine packets were sold at 185 post offices against 91 in the previous year. In these post offices more than 702 packets, equal to 71,604 doses of quinine of 5 grains each, were sold against 164 packets equal to 16,524 doses in the previous year.

94. There was an increase in the sales effected in Marwar, Mewar, Ajmer-Merwara, Jaipur, Bikaner and Sirohi, which is attributed to the epidemic of malarial fever during September, October, November and December 1900.

95. It has now been arranged, by the orders of the Local Government of Rajputana, that the packets of quinine should be issued to the post offices in Rajputana direct by the Superintendent of the Aligarh District Jail and not through the agency of the Medical Department.

SECTION III.—JAILS.

96. The daily average number of prisoners was, owing to famine, greater in all Jails than in the previous year, *viz.*, 326·66 more in Ajmer and 1,408·88 more in the 20 Jails of Native States from which returns have been received. Daily average strength.

97. In the Ajmer Jail the daily average sick rose from 6·24 to 14·57, the mortality from 5 to 54 and the death-rate from 5·32 to 77·32 per mille in 1900. Cases and deaths.

98. The total number of cases treated in the Jails of Native States rose from 3,485 to 7,062 during the year under report, which may be attributed to the effects of famine on prisoners before conviction and the general unhealthiness of the year. The daily average sick also rose from 116·25 to 253·07, the mortality from 155 to 1,420 and the death-rate from 29·84 to 215·04 per thousand prisoners per annum.

99. The death-rate varied from nothing in the Kishengarh Jail to 1,804·07 per mille in Dungarpur,* of average strength. Death-rate.

100. The death-rate in Ajmer Jail as well as in the Native States Jails has been unusually high during 1900, and this has been attributed to the fact that some of the convicts were old and others in indifferent health on admission on account of famine and great scarcity of food-grains during the year under report.

101. In the Ajmer Jail malarial fever and spleen diseases contributed 26 per cent. of the cases treated, an increase of 10 per cent. on 1899. There were more cases of dysentery and diarrhœa by 9 per cent. and fewer of lungs and respiratory diseases by 15 per cent than in the previous year. The admission from cholera was 1 per cent. against nothing in 1899. Causes of admissions and deaths.

102. Thirty-three per cent. of the mortality in the Ajmer Jail was occasioned by dysentery and diarrhœa, being an increase of 13 per cent. on the ratios recorded for the previous year. The mortality from malarial fever and diseases of the respiratory organs were lower by 7 per cent. and 20 per cent. than in 1899.

103. In the Jails of Native States malarial fevers and spleen diseases gave rise to 24 per cent. of the total treated against 27 per cent. in the previous year, while the deaths from these causes were 6 per cent. against 12 per cent. in 1899.

104. Dysentery and diarrhœa contributed 33 per cent. of the sickness against 19 per cent. in 1899 and 54 against 35 per cent. of the mortality. The percentages of the other causes and deaths vary but slightly for the two years.

105. Three hundred and seventy-three cases of cholera occurred in the Jails of Native States as per detail in the list given under head cholera in this Report, of which 216 proved fatal.

106. *Bikaner.*—This Jail is a model of what a Native State Jail should be; thorough discipline is maintained and the large majority of the prisoners are engaged on renumerative in-door labour, and there is a very low percentage of sickness and mortality. The profits of the Bikaner Jail during the year under report were Rs. 29,000. Native State Jails and their condition.

107. *Jaipur.*—An excellent officer named Rai Sahib Hira Singh, late Native Superintendent, Bikaner Jails, was appointed Superintendent of Jails, Jaipur, on the 25th April, and it is hoped that under his supervision the entire management, health and condition of the prisoners will steadily improve. There is no proper discipline at present in these jails. The death-rate in the Central Jail rose from 30·35 to 62·51 and in the District Jail from 14·26 to 22 31 per mille of average strength, which is due to increased admissions to jails of prisoners in a very bad state of health on account of famine. These jails are generally over-crowded, which requires early remedy. The Dead House in the male ward of the Central Jail has been completed and some additions and alterations made in these jails during the year under report.

108. *Bharatpur.*—Major Drake-Brockman has done wonders with this Jail, which is most excellently managed and the prisoners are well looked after. The

---

* Total daily average strength 230·59. Total deaths 416.

total number treated was 154 against 129 in the previous year, with a mortality of 42·29 per mille against 25·48 per mille in 1899. Much more improvement in the general health cannot be expected unless a completely new jail is built.

109. *Kishengarh.*—The Kishengarh Jail is in good order and the prisoners are in good health.

110. *Alwar.*—The jail at Alwar is in excellent order as hitherto but the death-rate in the jail rose from 14·94 to 35·18 per mille of average strength. There is no light in barracks at night, which should be remedied as soon as possible.

111. *Jodhpur.*—The jail is in good order but over-crowded. It is therefore suggested that a separate barrack should be added to the Jail for under-trial prisoners. The garden is being enlarged and a new welldug. The daily average sick rose from 7·68 to 13·01 and the death-rate from 53·49 to 117·58. This high mortality is attributed to an epidemic of diarrhœa and cholera, bad water and low condition of the prisoners on admission.

112. *Kotah.*—The Kotah Jail is in good order and clean, but the death-rate rose from 29·03 to 445·66 per mille of average strength. This high mortality is due to dysentry and diarrhœa and a low condition of the prisoners on admission owing to the famine.

113. *Udaipur.*—This jail is in good order but still over-crowded. A barrack for 100 prisoners and new workshops are under construction. The dry earth system is not properly carried out. Two hundred and three deaths occurred during the year against 11 in 1899 giving a death-rate per mille of 437·07 against 22·00 in the previous year. This high mortality is due to dysentery and diarrhœa.

Inspection of Jails.

114. The Residency Surgeon and Chief Medical Officer inspected the jails at Bikaner, Jodhpur, Jaipur, Alwar, Bharatpur, Udaipur, Kotah, Bundi and Dungarpur, the Residency Surgeon, Western Rajputana States, inspected the Sirohi Jail and the Residency Surgeon, Jaipur, the Kishengarh Jail.

115. Everything requiring remedy was pointed out at these inspections and many improvements were sanctioned which will be carried out as far as possible.

116. Steady progress is being made in jail management in most of the States of Rajputana and the prisoners are now generally well cared for. The water-supply, the food and the vegetable gardens of jails are all receiving more attention than hitherto. There is still over-crowding of prisoners in some States and the old jails at Banswara, Pertabgarh, Dungarpur, Bundi and Shahpura are very defective in drainage and construction and some of the defects require immediate remedy. It is, therefore, suggested that Agency Surgeons may be appointed as Superintendents of the jails in their charges. At present discipline is not strictly enforced, and there are very few punishments, so that most of the jails are little more than Hawalats where detention is practically the only punishment.

Commissioned Medical Officers.

117. *Qualified Medical Staff.*—There were ten Commissioned Medical Officers employed in Rajputana at the end of the year under report besides the Military Medical Officers, *viz.*, three Residency Surgeons at Jodhpur, Jaipur and Udaipur, two Civil Surgeons at Ajmer and Bikaner and four Agency Surgeons at Alwar, Bharatpur, Kotah and Deoli. Besides these one Medical Officer was employed for special duty with His Highness the Maharaja of Jodhpur.

Administrative charge.

118. Lieutenant-Colonel A. Adams, M.D., I.M.S., held Administrative Medical charge in Rajputana up to 20th May 1900, on which date he succumbed to an attack of cholera after a few days' illness. He had shown unremittent zeal all through the anxious famine period, and his untimely death was largely due to over-work and anxiety. He was recommended for and if he survived would have received from Government the gold medal. Lieutenant Colonel D. ffrench-Mullen, M.D., I.M.S., Civil Surgeon, Ajmer, held charge of the duties of the Administrative Medical Officer in Rajputana from the afternoon of the 23rd May 1900 in addition to his own.

Additional charges.

119. The Civil Surgeon, Ajmer, is Medical Offier, Merwara Battalion, the Medical Officer, Abu Sanitarium, is Civil Surgeon of Mount Abu, the Agency Surgeon, Haraoti and Tonk, is Medical Officer of the Deoli Irregular Force, the Medical Officer, Mewar Bhil Corps, is the Civil Surgeon, Dungarpur, and

Superintendent of the Civil Dispensaries of Kotra and Kherwara, and the Medical Officer, Erinpura Irregular Force, inspects the Sheoganj Dispensary adjacent to the Cantonment of Erinpura.

120. Three Medical Warrant Officers were employed temporarily on plague duty. Warrant officers.

121. There were 12 Assistant Surgeons employed in Rajputana during the year, *viz.*, one at Ajmer and one at Beawar, three employed by the Marwar Darbar, four by the Jaipur Darbar, one by the Bharatpur Darbar and one by the Bikaner Darbar. Assistant Surgeons.

122. There were 23 Hospital Assistants employed by the British Government, *viz.*, eight in Ajmer-Merwara, ten in Political Agencies and Salt Dispensaries, two in Abu and Abu Road Dispensaries and a reserve of three to act for the above from time to time. Civil Hospital Assistants.

123. There were 133 qualified Hospital Assistants lent by Government and permanently employed by Darbars, and a reserve of 16 more to act temporarily for them, and to do plague, famine and cholera duty in Native States. The sanction of the Local Government was obtained to increase the scale of reserve Hospital Assistants from 10 to 15 per cent. for one year only, *i.e.*, up to the 30th April 1901.

124. There are still 16 Local Class Hospital Assistants employed, *viz.*, seven in Bharatpur, six in Jaipur, two in Dholpur and one in Marwar. Besides these there are seven Local Class Native Doctors who were locally entertained by the different States in Rajputana, *viz.*, two in Bharatpur, one in Marwar, one in Dholpur, one in Bundi, one in Mewar and one in Kushalgarh. It is hoped that these Local Class Native Doctors will shortly be replaced by qualified men from the list. Local Class Native Doctors.

125. There were eight Military Hospital Assistants employed with the Imperial Service Corps in Rajputana. Military Hospital Assistants.

126. Four Lady Doctors were employed in Rajputana as hitherto and there were 12 female Hospital Assistants, as in 1899. At present there is one vacancy of Lady Doctor at Jodhpur, and there are three vacancies of female Medical Subordinates in Rajputana, *viz.*, one at Beawar, one at Karauli and one at Udaipur. Lady Doctors.

127. *Ajmer.*—Miss Campbell continues to superintend the Mission Hospital for Women at Ajmer. Much excellent work has been done by this lady both in the hospital and in the people's houses. The number of patients treated and the other medical work done is shown under Mission Hospitals. Female Hospitals and Education of Women.

128. *Beawar.*—A qualified female Hospital Assistant, Champa Bai, was in charge of the Female Dispensary at Beawar till the 27th April 1900 when she died of cholera. In June Mrs. Samuel, a qualified Female Hospital Assistant, was transferred from Karauli and placed in charge of this institution on the 23rd June 1900. There has been a decrease in the patients treated which was due to non-employment of an Hospital Assistant for about two months.

129. The returns received from the Women's Hospitals in Native States of Rajputana, show a satisfactory increase of work done during the year under report in these institutions.

130. *Jhalrapatan.*—The Crofts Female Hospital was opened at Jhalrapatan on the 22nd August 1900, and put under the charge of Miss Helen Baldeo Singh, who is well up in her work and liked by the patients. There were 2,636 out-patients treated. There is no accommodation for in-door patients. If this deficiency is remedied a great deal of good work may be expected.

131. Miss Adams of Jodhpur (since dead), Miss Lauder of Alwar and Miss De Souza of Tonk have done much good work in the hospital as well as among the purda-nashins at their own houses.

132. A female Hospital Assistant attached to the Walter Female Hospital at Tonk was dismissed from the service during the year under report, and it is to be regretted that no qualified Female Hospital Assistant has as yet been obtained to replace her.

133. *Kotah.*—The Victoria Hospital at Kotah has been in charge of 2nd Class Hospital Assistant Bessie Karimullah throughout the year. There were 826 in- and 11,736 out-patients treated against 682 in- and 9,062 out-patients in the previous year.

134. Fifty-four major and 1,178 minor operations were performed; of the former 4 were midwifery cases.

135. The Female Hospital Assistant in charge is hard-working, but it is most desirable that a fully qualified Lady Doctor should be appointed.

136. The "dhaie" class has been kept up throughout the year. A second female Hospital Assistant, Phulmani George, was appointed on the 4th April 1900. She has done good work under the Hospital Assistant in charge.

137. *Udaipur.*—Miss Graham has been in charge of the Walter Zenana Hospital at Udaipur throughout the year. There was an increase of 600 in the number of both in-door and out-door patients during the year under report. There is no Hospital Assistant at present; however, endeavours are being made to obtain the services of one to reside in the hospital.

138. *Bharatpur.*—Bibi Rup Kuar has been in charge of the Female Department of the Hospital at Bharatpur and she has done good work. There has been an increase in the in-door patients treated which is due to the fact that two new wards for accommodating 36 in-door patients have been constructed and completed during the year.

139. *Karauli.*—Mrs. George has been in charge of the Female Hospital at Karauli on the transfer of Mrs. Samuel to Beawar on the 23rd May 1900. Accommodation for a few in-patients has been provided and 42 patients were treated during the year under report, against nothing in 1899.

140. *Sirohi.*—Mrs. Ives, a qualified nurse, is still employed in the Sirohi palace, but she has no opportunity of working among the towns-people.

141. Two female pupils are being educated by the Jodhpur Darbar at the Agra Medical School.

Imperial Service Troops.

142. The three Regiments of Cavalry, the Camel Corps, the two Transport Corps and the two Regiments of Imperial Service Infantry at Alwar, Jodhpur, Bikaner, Jaipur and Bharatpur have got well-equipped hospitals which have been regularly inspected by the Residency Surgeon and Chief Medical Officer in Rajputana.

Expedition to China.

143. The Jodhpur Imperial Service Cavalry, the Bikanir Corps and Alwar Infantry were employed during the recent Military operations in China. His Highness the Maharaja of Bikaner and Maharaj Colonel Sir Pratap Singh, G.C.S.I., went in charge of their respective Corps. The Maharaja of Bikaner returned in January 1901. It is expected that the Bikaner Corps, Alwar Infantry and Jodhpur Infantry will return shortly.

144. The Civil and Military Hospital Assistants attached to these Imperial Service Corps accompanied their regiments to China.

Lunatics.

145. During the year under report there were 15 lunatics treated in the Ajmer Central Jail; of these two died, two were transferred to the Lunatic Asylum at Lahore, one made over to the Marwar Vakil, and seven were released on their recovery or made over to their relatives and three remained in the jail at the end of the year. Two of the lunatics were under the influence of drugs when brought to the jail, but they gradually recovered.

146. In Native States 262 lunatics were treated during the year, of whom 76 were cured, 20 made over to the custody of their friends and relatives, 52 died and 114 remained under treatment.

147. There are comfortable Lunatic Asylums at Jodhpur, Jaipur, Bikaner, Bharatpur, Alwar, Jaisalmer, Karauli, Kotah and Jhalawar. A Lunatic Asylum has been completed at Udaipur and is now available for insane.

148. Lunatics from Kishengarh are sent to the Jaipur Lunatic Asylum and paid for by the former State. None were, however, admitted from there during the year under report. No lunatics were treated in Dholpur, Jaisalmer, Sirohi, Tonk and Shahpura Dispensaries.

149. Lunatic Asylums are required at Pertabgarh, Banswara, Dungarpur, Sirohi, Shahpura, Dholpur, Tonk, Bundi and Kishengarh.

Central Asylum at Ajmer suggested.

150. There is no attempt made in these asylums to cure the patients and little or nothing done to amuse or occupy them; they are merely detained and fed and medically treated when suffering from ordinary ailments. It is, therefore, suggested that a Central Asylum might be started at Ajmer supported by the Native States, and all local asylums abolished. It would cost the States little more than the present arrangements, and the insane would be scientifically treated and cared for by an experienced staff.

Famine.

151. *Ajmer-Merwara.*—The districts of Ajmer and Merwara were distressed in 1898 and relief operations were commenced in November of that

year, on a small scale in Ajmer but on a much larger scale in Merwara. In July 1899 relief was discontinued in Ajmer, but the numbers continued to rise in Merwara and by September 1899 both districts were again distressed. The following are the death-rates from that period to the end of 1900 :—

Month.	Death-rate per mille from					Average death-rate per mille from all causes for the ten years ending 1900.
	Small-pox.	Fevers.	Dysentery and Diarrhœa.	Cholera.	All other causes.	
September 1899	...	1·50	·14	...	1·95	2·17
October „	·02	1·72	·20	...	2·33	2·19
November „	·07	2·40	·27	...	3·22	2·30

October „	...	12·23	1·33	...	14·29	2·19
November „	...	13·50	·82	...	14·94	2·30
December „	...	11·26	·63	...	12·43	2·41

Death-rate.

152. From November 1899 to October 1900 the death-rate was 100·91 per mille of population as compared with a decennial average of 24·28. The death-rate for 1900 was 119·97 per mille against a decennial average of 24·23. For these high figures malarial fever is mainly responsible, the death-rate from this cause being 81·56 per mille against the decennial average of 16·70. The fever assumed a virulent type from September to the close of the year. It attacked the rich as well as the poor and its virulence was largely due to the autumnal heavy rains after a prolonged drought producing a malarial fever which found a suitable breeding ground in the bodies of a population whose resisting powers were at a minimum owing to prolonged famine.

Relief afforded.

153. During the famine period in Ajmer-Merwara 25,822,132 units earned wages on relief works at a cost of Rs. 28,73,530 and 12,169,057 units got gratuitous relief at a cost of Rs. 6,42,166. The percentage of the whole population on relief was 18·4.

154. A certain percentage of the mortality is without doubt due to immigration from Native States, but the Indian Famine Commission of 1901 are of opinion that much mortality might have been avoided had gratuitous relief in villages been more freely resorted to.

155. *Famine in Native States.*—In Native States of Rajputana there were 62 Special Famine Hospitals opened during 1899-1900, on account of the failure of the monsoon rain of 1899, *viz.*, 23 in Marwar, 19 in Kotah, 11 in Bikanir, 5 in Sirohi, 3 in Jhalawar and 1 Poor House in Jaipur.

Medical relief.

156. There were 55,014 in-door and 62,278 out-door patients treated in these hospitals of whom 10,652 died giving a percentage mortality of 19·36.

Full particulars regarding the famine in Native States were given in the last year's report.

Censuses compared.

157. The Census of 1901 shows a difference of 18·1 per cent. from the Census of 1891 or a decrease of 2,175,070, in population; if in addition the normal increase for the same period due to excess of births over deaths, *viz.*, 10 per cent., is taken into consideration, it will be seen, that about 28 per cent. of the population of Native States in Rajputana has disappeared, and this is no doubt in a large measure due to famine and scarcity.

Vide table 6 attached.

TABLE 6.—*Rajputana.*

158. The Residency Surgeon and Chief Medical Officer considers that the services of the Agency and Residency Surgeons are not sufficiently utilized in times of famine. Concluding remarks.

In 1900 the Agency Surgeon, Alwar, was told by the Political Agent not to go into Camp on account of the scarcity of supplies, and the Residency Surgeon, Jaipur, stated that he was not consulted by the Resident at any time during the famine.

D. FF. MULLEN, *M.D., Lt.-Col., I.M.S.,*
Residency Surgeon and Chief Medical Officer
in Rajputana.

FORM No. XI.—*Statement showing the chief sanitary defects in the Municipalities of Ajmer-Merwara District during the year 1900.*

1	2	3	4	5	6	7
Number.	District.	Name of Municipality.	Population according to census of 1891.	Total death-rate per 1,000 of population.	Chief Sanitary defects.	Remedial measures adopted.
1	AJMER.	Ajmer Town and Suburbs .	68,843	155·92	1. Covered drains in Durgah and Naya Bazars and Kaisar Ganj are very defective and require saucer drains. 2. Saucer drains are necessary round the hydrants and the platforms require raising. 3. Birat system requires improving and the conservancy carts require renewing.	The conservancy carts are being renewed.
2		Nasirabad Town (Cantonment).	21,710	100·46	1. Drains almost non-existent, but the natural fall of the ground is fair. 2. Water-supply greatly deficient in the hot weather. 3. In domestic cleaning and conservancy the Birat system here prevails, and the result is that the ground of every Birat is saturated with many years' deposit of sewage.	(*a*) Drains, open, are laid as Funds are available. (*b*) An attempt is being made to patch the bund which holds the present reservoir from which water is brought by pipes to the cantonment. (*c*) An improved conservancy scheme has been sanctioned and will be introduced when Funds are provided.
3		Kekri Town . . .	7,100	357·32	1. The pond to the east side of Kutla ward in respect of which objection was taken by the Civil Surgeon, Ajmer, has been filled up at a cost of R1,117-11-2. 2. A culvert has been made to take water into the tank at a cost of R35-15-0. The work is still incomplete and will be completed shortly. 3. Wells were deepened during last Famine at a cost of R700. 4. There were no special defects in domestic conservancy and hence no measures were taken to remedy them.	Metalled roads are repaired annually. Two new kucha roads, one from Ajmer State to Baori well and the other from Baori well to a new gate, were made during the year. Drains are repaired and cleaned every year during rains.
4	MERWARA.	Beawar Town . . .	20,978	175·09	1. Roadside drains defective, they are in many cases disconnected and do not act, and being partially covered are handy receptacles for sweepings of private houses, which cannot be removed conveniently owing to faulty construction. 2. Water-supply procured from wells, municipal and private, which are periodically disinfected and cleaned as required; also from Baolies. Some wells yield excellent drinking water, whilst the greater number do not. The water from the few public Baolies in the town is principally used for irrigation purposes. 3. Domestic cleaning and conservancy defective; private latrines are under improvement and private sweepers clean them and carry the excreta to the nearest public latrines from whence it is removed by the municipal carts to the trenching grounds beyond the town.	Defective private latrines are being demolished and properly constructed ones being substituted and insisted on. Public latrines have been thoroughly cleaned and ventilated and approaches got in order. Sanitary arrangements satisfactory so far and every endeavour is being made to perfect the sanitation of the town and its surroundings and is a matter of constant and careful supervision.

ANNUAL STATEMENT I.—*Showing particulars of vaccination in Rajputana during the year 1900-1901.*

No.	Name of State.	Population of district according to computation of 1891.	Average population per square mile.	Average number of vaccinators employed throughout the season.	Total number of persons vaccinated.			Average number of persons vaccinated by each vaccinator.	PRIMARY VACCINATION.				Re-vaccination.		Percentage of successful cases.		Persons successfully vaccinated per thousand of population.	Average annual number of persons successfully vaccinated during previous five years.		Average annual number of deaths from small-pox during previous five years.	
									Total.	Successful.			Total.	Successful.	Primary.	Re-vaccination.		Number.	Ratio per thousand.	Number.	Rate per thousand.

																			Add for District Lock-ups .	4,870	
																			GRAND TOTAL .	40,166	

When prisoners of different classes are confined in the same jail, the expenditure on establishment and other items with which all are concerned should be divided over all. The cost per head under any item of expenditure is to be calculated on prisoners actually concerned in it or contributing to it, and not otherwise.

Hospital charges (column 7) should include rations and also the cost of medicines supplied both from the bazar and the Medica Store Depôts. In this series (Financial), annas and pies are only to be shown where there are columns for them.

STATEMENT XII (FINANCIAL).—*Showing the net cash earnings of convicts sentenced to labour in the Central Jail at Ajmer during the year 1900.*

1	2	3	4	5	6	7	8	9	10	11	12	13	14
Serial No.	NAME OF JAIL.	Average number sentenced to labour.	Average number employed on Jail manufactures.	Cash balance on manufacturing account in hand on the 1st January 1900.	Cash drawn on manufacturing account during the year.	Total.	Paid into Treasury on manufacturing account.	Cash balance in hand on manufacturing account on the 31st December 1900.	Total.	Cash earnings (being total of column 10 less total of column 7).	Average earnings per head calculated on column 3.	Average earnings per head calculated on column 4.	REMARKS.
				₹ a. p.	₹ a. p.	₹ a. p.	₹ a. p.	₹ a. p.	₹ a. p.	₹ a. p.	₹ a. p.	₹ a. p.	
1	Ajmer Central Jail .	556·61	358·41	37 2 5	5,561 14 4	5,599 0 9	8,583 5 9	47 10 11	8,631 0 8	3,031 15 11	5 7 2	8 7 4	

NOTE.—All proceeds of labour, whether paid for by transfer in accounts from other Departments or by cash, are to be included in this statement, but no mere estimate of value of work done by convicts as prison servants or in manufacturing clothing or other articles required for jail purposes is to be included.

The AGENT to the GOVERNOR-GENERAL,
RAJPUTANA,

To

The SECRETARY to the GOVERNMENT of INDIA,
FOREIGN DEPARTMENT.

Dated Camp, *the 6th November 1902.*

Sir,

With reference to the correspondence ending with Major Daly's letter No. 2667-I. A., dated the 2nd July 1902, I have the honour to forward the Annual Report on Sanitation, Dispensaries and Jails in Rajputana for the year 1901, and on Vaccination for 1901-1902, prepared by Lieutenant-Colonel D. ffrench-Mullen, M.D., I.M.S., Residency Surgeon and Chief Medical Officer in Rajputana, together with my review on the Report.

I have the honour to be,
Sir,
Your most obedient Servant,
A. MARTINDALE,
Agent to the Governor-General, Rajputana.

REVIEW.

Review of the Annual Report on the Sanitation, Dispensaries, and Jails of Rajputana for the year 1901, and on Vaccination for the official year 1901-02.

The year 1901 was one of short rainfall, and, as frequently happens in such cases, it was comparatively healthy, notably so in view of the returns for 1900. The rainfall was deficient not only in Ajmer-Merwara but also throughout most parts of Rajputana. The yield of the autumn crop was poor, and in the beginning of November it became necessary to commence relief measures in Ajmer-Merwara and in several of the Native States. Owing to the facilities now enjoyed by the Province for import from other parts of India there was no abnormal rise in prices of food grains except in isolated Districts.

The marked decrease in sickness and mortality during 1901 as compared with 1900 is attributed, no doubt correctly, to the dry and non-malarious character of the year.

The registration of vital statistics in Native States, so often unfavourably criticized in previous years, still affords much room for improvement. The birth returns are less reliable than the death-rates owing chiefly to the suspicion with which the registration of births is still regarded in many parts of the country. In Ajmer-Merwara the registration of births remains imperfect. In the British tract of Ajmer-Merwara the death-rate fell from 119·97 per mille of the population in 1900 to 33·13 in 1901. In the Native States the average death-rate reported was 16·44 per thousand of population as compared with 40·41 in the previous year.

The Native States were practically free from cholera, only six deaths having been attributed to it in the course of the year. Fifty deaths were, however, reported from this disease in Ajmer-Merwara. On the other hand this district suffered little from small-pox, only four deaths being recorded. The returns of the Native States showed 680 deaths, the disease having appeared in epidemic form in Partabgarh, where 507 deaths occurred.

A larger number of vaccinations were performed in Ajmer-Merwara than in 1900, but the returns from Native States continue to show a falling off. The decrease is attributed to the diminished birth-rate and high mortality amongst infants. At the same time it is observed that only 185 Vaccinators were employed in 1901 as compared with 213 in the previous year. An explanation of the reduction in the number of Vaccinators in Marwar, Jaipur, Jaisalmer and Bundi, has been asked for.

In Ajmer-Merwara sanitation receives much attention, and some satisfactory progress is reported from the more advanced of the Native States, especially in Capital towns. Village sanitation is everywhere backward. The Residency and Agency Surgeons will again be instructed to lose no opportunity of impressing the importance of sanitary reforms in the towns and villages of the Native States to which they are attached.

The dispensaries at the close of the year, under review numbered 166 as in 1900; an account is given in the Report of the additions and improvements made in some of the existing buildings.

In both Ajmer-Merwara and in the Native States the decrease in the numbers of in-door and out-door patients treated at dispensaries, noticeable more particularly in cases of malarial fever, spleen, diarrhœa, and dysentery, was no doubt due to the comparative dryness of the year under review.

Female Hospitals continue to do excellent work and in some cases at least to gain popularity. The Native States of Kotah and Bharatpur have recently intimated their wish to employ Lady Doctors.

Four hundred and seventy-six cases of leprosy were treated during the year as against 842 in 1896. Table XII, Part I, and Chapter VIII, paragraphs 204-209, of the Rajputana Census Report for 1901, which deal with the statistics of infirmities, include only 461 lepers for the entire Province as against 708 in 1891. These figures must be accepted with reserve; nevertheless the opinion gains ground that the disease is gradually dying out. The Residency Surgeon

and Chief Medical Officer in Rajputana has been asked to institute special enquiries in order to ascertain if there has been a real decrease in the number of cases of leprosy.

The sale of quinine diminished in proportion to the absence of malarial fever.

The outbreak of Bubonic plague in the villages of Bali and Sewari in Marwar, between the months of January and May 1901, was referred to in the Report for 1900. The disease again made its appearance in February 1902 in the villages of Karinkote in Alwar and Dutharya in Marwar. It was fortunately prevented from spreading beyond these villages in which the first cases appeared. Altogether 159 persons were attacked and 117 of them died. In each instance the inoculation had good results. Apart from these outbreaks, 32 isolated cases (23 fatal) were reported during the year 1901-02.

The statistics of the period under review show that there was less sickness among the Jail population of the Province, and the mortality was much lower than in the previous year—results to be attributed to a lighter rainfall and better Jail management. In most Native States steady progress is being made in Jail arrangements, especially those connected with conservancy. Overcrowding is another worst defect. A new Jail is being constructed at Dholpur. The existing Jail at Partabgarh and Dungarpur are to be replaced by new ones as soon as funds permit. More accommodation is being provided in the Central Jail at Ajmer.

REPORT

ON

SANITATION, DISPENSARIES, AND JAILS IN RAJPUTANA FOR 1901,

AND ON

VACCINATION FOR THE YEAR 1901-1902.

SECTION I.—SANITATION AND VACCINATION.

METEOROLOGY.

Rainfall in Ajmer-Merwara.

During the year under report 13·57 inches of rain were registered in Ajmer, against 25·64 in the previous year, a rainfall of 6·89 inches less than the average of the previous six years. The rainfall at Beawar was also below the average of the previous six years, *viz.*, 11·02, against an average of 23·47 and the total registered was 12·45 inches less than the rainfall of 1900.

2. The Foy Sagar, which is the principal source of the Ajmer water-supply, contains sufficient water for one year. The water has been condemned by the Chemical Examiner, but it is potable and better than many other sources of supply.

Rainfall in Native States.

3. In almost all the Native States of Rajputana the rainfall was below the average. In Jaisalmer only 3·66 inches fell against an average of 8 inches, in Sirohi 5·51 inches against an average of 25 inches, in Bikaner 6·67 inches against an average of 9·09 inches, and in Jodhpur 7·39 inches against an average of 16 inches. The rainfall in Alwar was 19·18 inches and in Kotah 22·16 inches against an average of 24 inches and 30 inches, respectively. 19·90 inches of rain was registered in Bharatpur against 35·51 inches in the previous year. In Mewar the rain was very scanty and unsatisfactory. The rainfall of July and first half of August was very favourable and the crops seemed to be in a most promising condition. As, however, only a few cents fell since September the greater part of the harvest failed. Locusts and rats have also created some havoc.

Crops.

4. Fodder for cattle was sufficient and prices of food grains were moderate on account of the good harvests in other parts of India.

VITAL STATISTICS, BIRTHS AND DEATHS.

Population on which the birth and death-rates are calculated.

5. The birth and death-rates in this report have been calculated on the population according to the census of 1901.

The birth and death-rates in 1900 and 1901.

6. The birth-rate registered in Ajmer-Merwara in 1901 (population 476,912) was 16·10 compared with 14·67 in 1900, and 28·45 the mean birth-rate for the previous five years. The death-rate in 1901 was 33·13 compared with 119 97 in 1900 and 45·65 the quinquennial mean.

BIRTHS.

Births and birth-rate.

7. The number of births recorded in Ajmer-Merwara during the year 1901 was 7,679 against 7,958 in the previous year, and the birth-rate per mille was 16·10 against 14·67 in 1900. The apparent increase in the birth-rate is due to its being calculated on the population according to the census of 1901, which is less than that of 1891.

8. Of the total births registered during the year under report, 4,175 were males and 3,504 females against 4,402 males and 3,556 females in the previous year. This shows a decrease of 227 males and 52 females, respectively, when compared with 1900. The number of males to every 100 females born was 119·15 against 123·79 in the previous year, a decrease of 4·64. The registration of births is still imperfect.

DEATHS.

Deaths and death-rate.

9. In this division the total number of deaths in 1901 was 15,798 against 65,057 in 1900, a decrease of 49,259, which was due to the fact that famine and malarial fever of a virulent type prevailed in 1900, and that there was no epidemic in 1901. This gives a death-rate of 33·13 per mille of population against 119·97 last year, and an average of 45·65 for the previous five years. The highest mortality was recorded in the first and lowest in the third quarter of the year.

10. The total mortality among males was 8,321 and among females 7,477, and the ratios of mortality per mille of population were 33·15 and 33·10, respectively.

11. The total number of deaths among Hindus was 13,475, among Mahomedans 2,273 and among other classes 50 during the year under report against 57,046, 7,802 and 219, respectively, in 1900, showing a decrease in each class.

12. The total number of deaths from all causes in 1901 also shows a considerable decrease when compared with last year. Only four deaths from small-pox were recorded in the District in 1901 against 2,610 deaths in 1900, *viz.*, one in March, one in May and two in December.

13. Twenty-one per cent. of the total mortality was registered in people above 50 years against 19 per cent. in the previous year, and the highest mortality was reported in people between the ages of 30 and 50 years. The mortality among children under five years of age was 24 per cent. of total deaths, a decrease of 9 per cent. when compared with the previous year.

14. In all the 23 circles of registration, deaths exceeded births in the Ajmer-Merwara District.

15. The registration of births and deaths in Istimrari villages is still very defective and it is hoped that early steps will be taken to improve matters, as until this is done, the collection of vital statistics for the whole Ajmer district is vitiated.

16. In accordance with the instructions contained in letter No. 2212 (Sanitary), dated the 28th November 1901 from the Government of India, Home Department, to the Secretary to the Government of Bengal, Municipal (Medical) Department, columns 11 and 12 of Annual Form II and Form No. XI have been abolished. As directed in Government of India, Home Department, Resolution No. 1530-43, dated the 13th August 1901, deaths from plague have been shown in a separate column between the sub-columns for small-pox and fevers in Annual Forms Nos. II and VI. Similar additions have been made in the column with the major heading "Ratio of deaths per 1,000 of population."

FOR 1901, AND ON VACCINATION FOR THE YEAR 1901-1902.

TABLE I.—*Births and Deaths in Native States.*

NOTE.—The information required for this table cannot be obtained in full from Jaisalmer. The total, therefore, of column 16 does not agree with the totals of the 9 preceding columns.

17. Registration of vital statistics has been carried on as before in 18 Native States, but with indifferent success. Registration in the capital cities has improved somewhat.

18. The agencies for collecting vital statistics in these States are still very imperfect, and endeavours are now being made to have special registration departments formed, or to appoint special officers for the purpose under the direct authority of the Agency and Residency Surgeons, and until some reform of this sort is accomplished, reliable data will not be forthcoming.

19. At Ajmer there is an Assistant Health Officer under the Civil Surgeon, who investigates personally every death in the city and suburbs without causing the slightest friction; the same thing can be done in Native States' capitals if care is taken in selecting a person of tact and experience for the purpose.

20. The registered birth-rate in capital cities ranged from 54·31 per mille of population in Jhalrapatan (old) city to 2·59 in Bundi, and in rural circles from 50·57 in Shahpura to 1·50 in Sirohi. The average for all the States was 14·52 per mille of population.

21. There has been a considerable decrease in deaths from fevers, cholera, small-pox and also from dysentery and diarrhœa in the States of Rajputana during the year 1901, *viz.*, 29,462, 6,680 and 5,584, against 65,262, 19,943, 3,051 and 18,965 in 1900. More deaths from snake-bite were registered, *viz.*, 109, against 74 in the previous year.

22. The death-rate in cities ranged from 102·96 per mille of population in Partabgarh city to 9·11 in Dholpur, and in rural circles from 58·26 in Pertabgarh to 4·02 in Sirohi. The average for all the States was 16·44 per mille of population.

TABLE II.—*Number of cholera cases reported in Ajmer-Merwara and in Native States during the year 1901.*

NAME.	MARCH.		MAY.		JUNE.		JULY.		AUGUST.		NOVEMBER.		DECEMBER.		TOTAL.		Percentage of deaths to cases.
	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.

23. During the year under report cholera did not appear in an epidemic form in Rajputana.

Ajmer-Merwara.

24. Only 61 cases and 50 deaths from cholera were reported from Ajmer-Merwara in 1901 as against 5,621 cases and 4,841 deaths in the previous year. Thirty-one cases and 29 deaths occurred in the city of Ajmer, and 30 cases and 21 deaths at Pushkar in the district from the 14th March to 16th December 1901.

25. In Ajmer town the first person attacked was a Bengalee woman who arrived from Calcutta on the 11th of March and proceeded to Pushkar with a party of pilgrims. She returned to Ajmer on March 14th, was attacked with cholera and died the same day. Cholera again appeared in Ajmer city in July when 4 fatal cases occurred. During August and the greater part of November the district was entirely free from cholera.

26. At the close of the Pushkar fair on 24th November it broke out at Pushkar. There were altogether 30 cases and 21 deaths reported up to the 16th December 1901. The first case was an imported one arriving from Muttra; the deceased was an attendant on his brother who was attacked with the disease on his way to Pushkar. The Assistant Health Officer was deputed to inquire and report, and all necessary precautions were taken to prevent the spread of the disease.

27. It again appeared in Ajmer town on the 27th November and remained till the 3rd December 1901 during which 26 cases and 24 deaths were reported, all of which came from Pushkar.

28. Disinfection of wells with permanganate of potash was regularly carried out and every possible sanitary precautions taken.

Native States.

29. As regards cholera in the Native States of Rajputana, the year may be considered a non-cholera one, only 6 cases having occurred, *viz.*, 5 in Jaipur city between 13th May and 12th June and 1 in Jodhpur city on August 8th, all of which proved fatal. The source of infection in these cases was probably local.

30. As only 67 cases of cholera occurred in the province during the year and as at no time did it assume an epidemic form, no cholera map is appended.

SANITATION.

31. The water from the Foy Sagar is freely used for drinking purposes both in the city and suburbs, while the Anasagar Lake supplies the gardens and dhobis' "ghats".

Ajmer city.

32. The sanitary tramway has worked satisfactorily at Ajmer during the year and the trenching-grounds have been well looked after. The conservancy carts are being repaired. Some private privies in the city and suburbs have been improved, and some new urinals constructed. Moveable latrines have also been constructed at Inder-kote.

33. The huts in the plague observation camp near the Railway Station are kept in good order.

Beawar.

34. The water-supply of Beawar needs to be placed on a sounder basis. The conservancy arrangements have been re-organised and are working well. The disposal of night-soil is well looked after under the direct supervision of the Municipal Secretary. The dismantling of the large side drains remains in abeyance for want of funds.

35. The rules for the improvement of village sanitation, which have been introduced in the marginally named villages, worked satisfactorily, and are reported to have improved their general sanitation.

Beawar.

Ramsar.	Jawaja.
Junia.	Bhim.
Harmara.	Barar.

36. Rules for Pushkar are still under consideration. It has been proposed to extend the rules to Todgarh also.

Jaipur.

37. *Native States.*—The light railway continues to perform valuable work in removing city sweepings, foul earth, rubbish and dead animals in increasing quantities. An Assistant Surgeon has charge of the Sanitary Department, and village sanitation is receiving some attention, although it is still backward. Water-supply of Jaipur is very deficient this year.

38. The Superintending Engineer pays great attention to sanitary measures in Jaipur. The Residency Surgeon reports that offensive trades are partially controlled, but many are still allowed within the city walls.

Jodhpur.

39. The sanitary steam tramway continues to be worked satisfactorily at Jodhpur. The sanitation of the city of Jodhpur is not as satisfactory as it might be, and Lieutenant-Colonel Crofts, I.M.S., the Residency Surgeon, has drawn the attention of the Darbar to the necessity of improving sanitation in the capital city as well as in large towns of Marwar. There is a special Hospital Assistant for sanitary work in Jodhpur.

Bikaner.

40. The sanitation of the city is satisfactory. It is supervised by the Municipal Committee and the Civil Surgeon. A qualified Hospital Assistant has recently been appointed as Assistant Health Officer for the city and suburbs of Bikaner, whose duty is to verify the registration of births and deaths, and vaccination, and look after conservancy and slaughter-houses and sanitation generally.

Udaipur.

41. The sanitary arrangements in the capital city are in the hands of the Police and are decidedly defective in comparison with the capitals of other large States. The Residency Surgeon reports that there is no proper plan for conservancy and sanitation, nor satisfactory arrangement for the supply of drinking-water. If any epidemic of water-borne disease occurs it will be controlled with difficulty.

Alwar.

42. The water level of the wells in Alwar for several years has been rapidly decreasing, and the condition of affairs promises to be very serious during the hot weather of 1902. The Municipality have, however, taken steps to have

all the important wells deepened as far as possible. The conservancy arrangements are carried out under the control of the Vice-President and are supervised by the Agency Surgeon.

43. Nothing has yet been done as regards the improvement of village sanitation.

Bharatpur.

44. During the year a Municipality has been sanctioned and started in the city of Bharatpur, which is doing good work under the Chairmanship of the Agency Surgeon. The questions regarding the supply of a good quality of drinking-water to the city and the effective disposal of human excreta are under consideration.

45. There is a Sanitary Board made up of local residents at Dig, a town in the Bharatpur District of 15,409 inhabitants.

Karauli.

46. The city is clean and well drained, and the Municipal Committee takes much interest in sanitation.

Dholpur.

47. The conservancy system is primitive at the capital. A competent Sanitary Inspector has been selected who, it is hoped, will by degrees improve matters.

Kishengarh.

48. The conservancy staff is too small for the requirements of the city, and carts should be introduced instead of pack carriage, which is both insanitary and otherwise objectionable. The drainage of the city is good and sufficient throughout the year. The tanneries are still within city limits.

49. The necessity for improvement in village sanitation and its effects on the public health should be constantly urged upon Darbar officials, and Residency and Agency Surgeons should lose no opportunity, while on tour, of impressing on headmen and villagers the advantages to health which accrue from a pure water-supply, the removal of stagnant water by thorough surface drainage, and good hygienic surroundings.

VACCINATION.

Ajmer-Merwara.

50. The primary vaccinations in Ajmer-Merwara rose from 10,660 in 1900-1901 to 10,831 in 1901-1902 and the successful percentage from 99·20 to 99·21. Re-vaccinations fell from 21 to 10 operations. The increase in the number of primary operations performed and in the successful percentage both indicate satisfactory progress in this division.

51. One Native Superintendent and 15 Vaccinators have been employed in this division, one more than in the previous year.

52. 22·55 per thousand of population were successfully vaccinated during the year against 19·50 per mille in 1900-1901. The average number of operations performed by each Vaccinator fell from 763 in 1900-1901 to 723 in 1901-1902, and each successful vaccination cost 41 against 42 pies in the previous year.

53. The Civil Surgeon, Ajmer, inspected 532 against 170 vaccinations in the previous year.

54. The Civil Surgeon has been able to do some inspection of vaccination during the year beyond Ajmer city, and as there is an Assistant Surgeon at Ajmer, it is hoped he will be able to further extend his supervision. The Superintendent of Vaccination, Nasirabad, saw 803 vaccinated children, 97·38 per cent. of whom had been successfully vaccinated.

55. The Native Superintendent in Ajmer-Merwara inspected 403 villages and saw 6,049 vaccinated children against 6,030 in the previous year.

56. The Vaccination Act was introduced into the Municipal limits of Kekri town from 1st October 1901. An additional Vaccinator was employed for the Kekri Municipality.

57. The Vaccination Act was applied to the Beawar Municipal town on 1st January 1902. Previous to that the Municipal Vaccinator was working also in the villages around Beawar, but since the above date his operations have been confined to the Beawar Municipal limits, and the number of vaccinations performed by him has consequently undergone a reduction.

Native States.

58. In Native States the primary vaccinations fell from 268,405 in 1900-1901 to 250,898 in the year under report, and 98·63 per cent. of these were successful against 98·69 in 1900-1901. The decrease in the number of vaccinations is due to a low birth-rate and high infant mortality in many of the States.

59. There were 185 Vaccinators employed against 213 in the previous year. The reduction of 28 Vaccinators and six Assistant Superintendents took place in Marwar, one Vaccinator in Jaipur, one in Jaisalmer, and one in Bundi. Two additional Vaccinators were engaged in Bikaner and one in Mewar.

60. The average number of operations performed by each Vaccinator rose from 1,343 to 1,383 in 1901-1902, and the average work done by the Vaccinators of different States varied from 3,110 in Bharatpur to 12 in Shahpura.

61. The expenditure on vaccination in Native States of Rajputana fell from Rs. 31,535-4-9 in 1900-1901 to Rs. 25,719-9-10 in the year under report, which is specially attributed to the reduced number of Assistant Native Superintendents and Vaccinators employed in Marwar. The average cost of each successful vaccination was 20 pies against 22 in the previous year, and it varied in different States from 8 pies in Bharatpur to 32·99 pies in Shahpura.

62. Only 4,362 successful re-vaccinations were performed during the year under report, 2,127 of which were done in the Jaipur State, 696 in Bikaner, 563 in Alwar, and 442 in Bharatpur.

63. The returns from the Native States show a falling off in the numbers of vaccinations performed in 1901-1902, mainly in Marwar, Jaipur, Bikaner, Kishengarh, Jaisalmer and Sirohi. In Marwar this decrease is principally caused by the emigration of some 90,000 persons from Malani, the whole of this country was practically deserted; in Bikaner, the population decreased from 831,955 to 584,712 and choukidars were detailed to assist Vaccinators instead of sepoys in their work. These being meenas by caste were not allowed by people to visit their houses for fear of committing theft. In Jaipur the falling off in number was due to a low birth-rate and a high infant mortality and in Kishengarh to defects in registration of births, want of official assistance and alteration in Vaccinators' batta and carriage allowance. This will be altered and a different system will be introduced directly under the charge of the newly appointed Assistant Surgeon, which, it is hoped, may give better results.

64. In the Bharatpur State, 46,192 primary vaccinations were performed during the year under report against 43,769 in the previous year, of which 99·06 per cent. were successful. The number of re-vaccinations has much decreased, being only 452 against 2,283 last year, which is attributed to the greater efficiency in the performance of the operation by subordinates.

65. In the Alwar State, 22,301 primary vaccinations were performed against 20,743 in 1900-1901, and 99·57 of these were successful, and in the Kotah State 11,160 against 8,864, all of which were successful. A Native Superintendent for the Kotah and Jhalawar States was employed on 12th October 1901.

66. The total number of primary vaccinations performed during the year in Mewar, Banswara, Partabgarh and Kushalgarh has been 12,704, as compared with 11,871 in the previous year, showing an increase of 833. There has not been any marked increase in the aggregate of population of these States; they are still much affected by the succession of seasons of scarcity through which they have passed.

67. Only 12 vaccinations were performed in the Shahpura city and none at all in the villages during the year, as reported by the Agency Surgeon, Haraoti and Tonk, Deoli, of which 1 was unsuccessful. Vaccinator Shimbhu Dyal showed 340 vaccinations done up to the end of February 1902 in his monthly returns. The Inspecting Officer, however, found that these returns were falsified and the vaccinator was dismissed as being totally untrustworthy.

68. The Agency Surgeon, Eastern Rajputana States, who takes great interest in vaccination, inspected 291 towns and villages and saw 19,102 children who had been successfully vaccinated; the Residency Surgeon, Jaipur, inspected 666 towns and villages and saw 10,522 children who had been successfully vaccinated; the Agency Surgeon, Alwar, inspected 692 towns and villages and saw 6,776 children who had been successfully vaccinated; the Civil Surgeon, Bikaner, inspected 79 towns and villages and saw 3,408 children vaccinated;

the Residency Surgeon, Western Rajputana States, inspected 158 towns and villages and saw 2,875 children who had been successfully vaccinated; the Agency Surgeon, Kotah and Jhalawar, inspected 562 towns and villages and inspected 2,478 children who had been successfully vaccinated; and the Residency Surgeon, Mewar, inspected only the capital town of Udaipur and saw 328 children who had been successfully vaccinated, as he could not go on tour owing to the illness of the Maharaj Kanwar.

69. The Residency Surgeon and Chief Medical Officer in Rajputana in his winter tour of inspection examined 3,077 cases.

70. Lymph is kept up throughout the year in most of the important States by carrying on vaccination in selected places during the hot weather, and humanized lymph is generally used; however, calf lymph is now being used, especially in Alwar and Jodhpur, and it has many advantages over ordinary lymph.

SECTION II.—DISPENSARIES.

STATEMENT I.

71. There are now 166 hospitals and dispensaries in Rajputana, and they have been classified as follows in accordance with the orders of the Government of India in the Home Department (Medical) No. 2331-40, dated the 27th December 1900:—

I.	State Hospitals	11
III A.	Private (*i.e.*) Native States' Dispensaries	146
III B.	State-aided hospitals and dispensaries	9
	TOTAL	166

72. Besides these there are 5 Mission and 6 Railway hospitals open for the treatment of patients.

73. *Ajmer-Merwara.*—The hospital building at Ajmer is sadly in need of repairs and has never been completed. A fund has, however, been raised as a memorial to Her late Majesty the Queen-Empress, and it is proposed to devote the proceeds, which are expected to amount to about a quarter of a lakh of rupees, to putting the hospital on a proper footing and providing funds for the entertainment possibly of a female Hospital Assistant or trained nurse to take charge of the zenana wards of the hospital.

74. The Kekri Dispensary has been roofless now for about five years, and it is time that such an important centre of trade should be provided with a suitable building. This is under attention.

75. *Native States.*—The Mayo Hospital, Jaipur, has had the following important improvements carried out in it for which the Residency Surgeon, Jaipur, reports that his Highness the Maharajah generously permitted the extra expenditure of Rs. 10,000, and these works have greatly added to the utility of the institution:—

(*a*) Six separate cubicles attached to the female wards for special cases.

(*b*) A white marble floor to the main surgical ward and 150 new bedside companions.

76. An accommodation for ten in-door patients has been provided in the Dig Dispensary in Bharatpur, where useful surgical work is now being performed, especially at the visits of the Agency Surgeon, Eastern Rajputana States.

77. Many improvements have been made in the Dholpur Sudder Dispensary during the year.

STATEMENT II.

78. Shows the total number of patients, both in-door and out-door treated during the year under report, and it has been prepared in the revised form prescribed in the Government of India, Home Department, No. 614-21 (Medical), dated 6th May 1901, in which sub-columns 4*a*, 5*c*, and 5*d*, have been divided into 4 columns, each showing, respectively, "Men," "Women," "Children" and "Total."

79. One million one hundred and ninety-two thousand nine hundred and seven patients of all classes were treated during the year 1901 against

1,354,475 in 1900. A decrease of 161,568 in the number treated in the hospitals and dispensaries as shown in the regular standard statements Nos. II, III and IV, and the falling off is noted against Ajmer-Merwara Agency and Salt Dispensaries and Native States as follows :—

	Total cases treated in—		
	1900.	1901.	Difference.
Ajmer-Merwara	72,273	56,787	—15,486
Agency Hospitals and Salt Dispensaries	26,786	22,648	—4,138
Native States	1,255,416	1,113,472	—141,944
Total	1,354,475	1,192,907	—161,568

80. The decrease in attendance was due to the healthiness of the year and in a great measure to the fact that malarial fever was less prevalent than in the previous year.

81. Of the total number of 1,192,907 patients treated during the year 1901, 17,599 were in-door patients against 26,924 in 1900.

82. Of the in-door patients treated during 1901, 12,851 or 73·02 per cent. were noted as "cured," 1,452 or 8·25 per cent. "relieved," 1,330 or 7·56 per cent. were "discharged otherwise" and 1,060 or 6·02 per cent. "died." The balance 906 or 5·14 per cent. remained under treatment at the close of the year.

83. The percentage of deaths (6·02) during 1901 was more than 50 per cent. lower than in 1900, *viz.*, 13·76.

84. The number of beds available in the hospitals and dispensaries of this province was 1,468 as compared with 1,430 in the previous year, and the daily average number of in-door patients treated during the year was 897·22 against 2,744·95 in the previous year.

85. Of the 1,175,308 out-door patients, 1,006,685 attended personally and 168,623 were represented by friends :—

Men	633,367
Women	255,799
Children	286,142

86. The daily average attendance of out-door patients fell from 11,196·08 in 1900 to 9,554·63.

STATEMENT No. III.

87. The diseases for which the patients were treated are shown in this statement. The percentage of cases treated for certain diseases during the years 1900 and 1901 is noted below :—

Diseases.	Percentage during 1900.	Percentage during 1901.
Malarial fevers and spleen diseases	22·75	21·67
Syphilis	1·83	2·17
Rheumatism	3·39	4·11
Diseases of the eye	8·23	8·46
Lungs and respiratory diseases	5·63	7·57
Diarrhœa and Dysentery	8·59	4·21
Ulcers	8·59	9·30
Skin diseases	8·34	9·00
Injuries	1·90	2·13

88. Four hundred and seventy-six cases were treated for leprosy in hospitals and dispensaries during the year under report against 564 in 1900.

89. The cases of scurvy decreased from 2,389 in 1900 to 1,843 in 1901.

90. There was no cholera case treated in hospitals and dispensaries of the Native States in Rajputana during the year 1901 except four cases in the Ajmer General Hospital.

91. *Small pox.*—There were only four deaths in Ajmer-Merwara from this disease against 2,610 in1900. The disease appeared in nine Native States in

which 680 deaths occurred during the year under report against 3,051 in 1900. Out of the total deaths reported, there were 507 deaths from this disease in Pertabgarh, 70 in Bharatpur and 52 in Kotah. Much vaccination was performed in Ajmer-Merwara and in most of the States of Rajputana and this did much to mitigate the ravages of this disease.

92. *Snake-poisoning.*—Calmette's antivenine is kept in stock and used for the treatment of snake-bite when opportunity offers.

93. *Bubonic Plague.*—Between the 16th May 1901 and end of August 1901 no case of bubonic plague, either imported or indigenous, was detected in Rajputana. After the latter date occasional cases began to appear on the Railway, and up to the end of March 1902 there were 32 cases of plague or suspected plague discovered by the inspecting officers, 23 of which proved fatal, *viz.*, 18 cases and 14 deaths at Abu Road, 4 cases and 3 deaths at Rani in Marwar, 1 case and 1 death at Bhilwara in Mewar, 1 case and 1 death at Beawar in Merwara, 1 case and 1 death in the city of Jaipur, 1 case and 1 death in the city of Jodhpur, 3 cases and 2 deaths at Kotputli in Jaipur and 1 case at Falna in Marwar, 1 in Bikaner City and 1 at Kuchaman Road in Marwar, all of which recovered.

94. The following is a brief report of the recent epidemic which appeared in the villages of Karnikote and Khuteta in the Alwar State and village Dutharya in the Desuri Hakumat of the Marwar State.

95. One hundred and fifty-nine indigenous cases and 117 deaths were reported to have occurred from February to April 1902 as detailed below:—

	Cases.	Deaths.
Karnikote	69	59
Khuteta	7	7
Dutharya	83	51
TOTAL	159	117

96. The outbreak of plague at village Karnikote was traced to a Sonar named Birdha who contracted the disease at Umballa and arrived at Karnikote with his brother on the 31st January. Birdha died on the 1st February in the house of a Sonar named Mulia. No further death was reported to have occurred in the village until 21st February 1902 when a woman died in the house of Mulia mentioned above, two more deaths occurred in the same house on the 23rd February and 1st March. Cases then began to occur almost daily, and thus plague got a footing in the village.

97. In the month of February three cases of plague were reported at Karnikote, all of which proved fatal, in March 57 cases and 44 deaths and in April 9 cases and 12 deaths up to the 10th April when it totally disappeared from this village.

98. The following measures were adopted for the suppression of the disease:—

> The village was cleared out, a hospital and contact camp were formed and the erection of huts was rapidly proceeded with. A company of the Alwar Imperial Service Troops was employed in taking the the roofs off infected houses and breaking open walls to admit sunlight. Perchloride of mercury lotion was at the same time poured on the floors and sprayed on the walls. From the 10th March onward the work of unroofing, disinfection and white-washing steadily proceeded until the 24th March. All the thatching was burnt, all rubbish heaps were removed and the entire village was thoroughly cleaned by that date.

99. About 1,278 persons, including almost the entire population of the village, were inoculated from 26th March to the 27th April 1902, the only exceptions were women 8 months pregnant, and children under six months old.

100. The village was re-occupied on 28th April, but previously it was again thoroughly disinfected.

101. There were seven deaths in the village of Khuteta from 1st to 4th March 1902 from some kind of rapidly fatal fever, but from the whole history of the

epidemic at Khuteta it appears that the deaths were due to *cerebro spinal meningitis*, and not to plague.

102. The Residency Surgeon and Chief Medical Officer in Rajputana inspected the infected villages with the Honourable the Agent to the Governor-General and found everything satisfactory.

103. Plague also broke out at village Dutharya in Marwar close to the Somesar Railway Station on the 24th February 1902, and totally ceased on the 2nd April 1902. In February there were 12 cases and 7 deaths, in March 65 cases and 38 deaths and in April 6 cases and 6 deaths, total 83 cases and 51 deaths.

104. The first case of plague that occurred at Dutharya on the 24th February 1902 was in the person of a boy aged 12 (a Sadhu's son) who dined at Nowla Mahajan's house. This man had come to the village from Sholapur Bazar, Poona, in order to get his daughter married. He arrived in Dutharya on 19th February and showed no symytoms of plague then or afterwards.

105. The following suppressive measures were adopted with satisfactory results:—

> The village was evacuated on 23rd March 1902, and the people kept out in camps, those exposed to infection were freely disinfected, and the sick and their attendants carefully segregated. Almost all the people of the village and camps, numbering 368, were inoculated in two days, *viz.*, on the 29th and 30th March, in addition to 200 imported coolies inoculated on 20th April 1902.

106. All those in the general and contact camps were allowed to return to their homes in Dutharya on 30th April 1902, after the village was thoroughly cleaned and completely evacuated for 38 days. Only convalescents and those suffering from the after-effects of plague are now in camp.

107. The Residency Surgeon and Chief Medical Officer inspected the village and found the arrangements satisfactory.

108. Much credit is due to Major Shore, I. M. S., and to Lieutenant-Colonel Crofts, I. M. S., for the excellent manner in which they managed the plague outbreaks at Alwar and Marwar, respectively, and a separate report will be furnished on their operations against plague as soon as the convalescents return to their villages.

STATEMENT No. III A.

(Operations.)

109. The details of surgical work performed in the hospitals and dispensaries are furnished in Statement III A. 61,164 operations of all classes were performed in Ajmer-Merwara and in Native States of Rajputana during the year under report against 63,180 operations done in the previous year. During the year 1901, operations were performed on 60,647 persons, and 151 surgical cases remained under treatment on the 1st day of the year 1902. Of the persons operated on, 59,885 or 98·45 per cent. were "cured", 489 or 0·80 per cent. were "relieved," 176 or 0·29 per cent. were "discharged otherwise," and 66 or 0·11 per cent. "died", while 212 "remained under treatment" on 31st December 1901.

110. Of the operations performed, 953 were extraction of the lens for cataract against 865 in 1900, of which 785 or 82·37 gained good sight. As in the previous year there was no death from this operation or its consequences. Eighty-three lithotomies, 119 litholapaxies and 137 amputations were performed.

111. In Ajmer-Merwara 2,378 operations were performed against 2,586 in the previous year with only 2 against 3 deaths. Of these operations 42 were extraction of the lens for cataract, 4 lithotomies, 9 litholapaxies and 10 amputations against 46 extractions of the lens, 9 lithotomies, 7 litholapaxies and 15 amputations in 1900.

112. In Native States Hospitals and Despensaries 58,786 operations were performed against 60,594 in 1900 with 64 against 90 deaths. Of these operations 911 were extractions of the lens for cataract, 79 lithotomies, 110 litholapaxies and 127 amputations against 819 extractions of the lens, 54 lithotomies, 79 litholapaxies and 194 amputations in the previous year.

113. In Native States, Jaipur stands well ahead of all others in surgery.

114. A list of selected surgical operations performed

(*i*) by Commissioned Medical Officers;

(*ii*) by Civil Assistant Surgeons;

(*iii*) by Lady Doctors;

is subjoined as usual.

115. Assistant Surgeon Daljang Singh Khanka of the Mayo Hospital, Jaipur, stood first in eye and other surgery among Medical Subordinates of his class.

116. Second class Hospital Assistant Mirza Inayet Husein, now in charge of the Bhagwan Dass Hospital in Bikaner, performed the largest number of important operations among Hospital Assistants.

TABLE III.—*Selected List of Surgical Operations showing the number of each performed by individual Officers in Rajputana during the year 1901.*

NAME OF OPERATOR.	Period on duty.	Excision of tumours (all kinds).	Excision of joints (partial or complete).	Operations on bones.	AMPUTATIONS. Through and above metacarpus.	AMPUTATIONS. STATEMENT No. IV.

117. In Statement IV the details of class and sex of both in-door and out-door patients are furnished—

	1900.	1901.
Europeans	558	538
Eurasians	2,710	1,850
Hindus	906,719	794,237
Musalmans	344,054	318,845
Other classes	100,434	77,437

118. The population of Rajputana is largely composed of Hindus, the Mahomedans being in a minority; as a natural consequence Hindus form a majority of the patients attending the hospitals and dispensaries.

119. The ratio per cent. to the total treated of sex and age is compared with the figures of 1901 as follows:—

	1900.	1901.
Men	52·38	54·06
Women	21·98	21·84
Children	25·64	24·10

120. The figures indicate that the percentage of women and children attending the hospitals and dispensaries slightly decreased while that of men increased.

STATEMENT V, PART I.

121. Shows the income and expenditure of Government Dispensaries and Hospitals and only the expenditure on those in Native States.

122. The subjoined table shows the total expenditure on hospitals and dispensaries and also the cost of each case treated.

TABLE IV.—*Expenditure.*

	8. On buildings and repairs . .	...	...	...
	TOTAL .	10,639	11,400	100·00

TABLE IV.—*Expenditure*—contd.

STATEMENT V, PART I—*contd.*

		1900.	1901.	Percentage on the total cost of 1901.
	ON ESTABLISHMENT.	Rs.	Rs.	
NATIVE STATES	Paid by Government—			
	1. Medical Officers	535	600	0·19
	Paid by Native States as salaries—			
	1. Medical Officers	1,15,881	1,13,093	36·25
	2. Compounders, Dressers, etc.	24,440	25,172	0·25
	3. Nursing Establishment	1,624	779	8·07
	4. Menial Servants	21,939	21,647	6·94
	5. On Bazar medicines	9,092	7,268	2·33
	6. On Europe medicines	76,493	81,172	26·02
	7. On diets	47,987	28,844	9·25
	8. On miscellaneous charges	23,527	22,369	7·17
	9. On buildings and repairs	4,940	11,014	3·53
	TOTAL	3,26,458	3,11,958	100·00
		Pies.	Pies.	
AJMER DIVISION	Cost per case treated	36	43	
	Cost per diet per diem	17	17	
AGENCY HOSPITALS AND SALT DISPENSARIES.	Cost per case treated	76	97	
	Cost per diet per diem	11	12	
NATIVE STATES	Cost per case treated	50	54	
	Cost per diet per diem	27	22	

123. In the Ajmer-Merwara Division expenditure fell from Rs. 13,497 to Rs. 12,644 in the year under report. This decrease of expenditure was under all heads with the exception of buildings and repairs, which is attributed to the healthiness of the year.

124. The invested capital of these dispensaries remained the same as hitherto.

125. The question of improving the pay and status of Hospital Assistants in Ajmer-Merwara is under consideration, and the improved scale will come into force in 1902. The Hospital Assistants in Ajmer-Merwara are badly paid in comparison with those serving in Native States, though their work and expenses of living are the same.

126. The total expenditure of Political Agency and Salt Revenue Dispensaries rose from Rs. 10,639 in 1900 to Rs. 11,400 in 1901. This increase is due to the appointment of an Assistant Surgeon to the Salt Dispensary at Sambhar in place of First Class Hospital Assistant Habeebullah Khan, retired on pension.

127. The expenditure on hospitals and dispensaries in the States of Rajputana fell from Rs. 3,26,458 to Rs. 3,11,958 in 1901, which is due to the decrease of Rs. 19,143 in expenditure on diets and of Rs. 845 in expenditure on pay of Nursing Establishment.

128. There was a considerable increase in expenditure on buildings and repairs when compared with that of the previous year, which is due to additions and alterations made in the Mayo Hospital at Jaipur and in the Sudder and out-dispensaries in Bikaner.

129. The cost of hospital diets in Ajmer-Merwara was the same as last year, whereas in Native States it fell from 27 to 22 pies per head per diem.

130. Of the total cost of hospitals and dispensaries in these States, Rs. 71,952 were expended in Jaipur, Rs. 33,628 in Kotah, Rs. 32,197 in Bikaner, Rs. 31,967 in Jodhpur, Rs. 24,249 in Bharatpur, Rs 20,849 in Mewar, Rs. 18,148, in Alwar, Rs. 10,172 in Jhalawar, Rs. 5,232 in Dholpur, Rs. 4,341 in Karauli, Rs. 3,651 in Sirohi, Rs. 2,774 in Jaisalmer, Rs. 2,422 in Tonk, Rs. 2,117 in Kishengarh, Rs. 2,067 in Shahpura, Rs. 1,839 in Bundi, Rs. 1,704 in Banswara, Rs. 1,286 in Partabgarh, Rs. 1,103 in Dungarpur, and Rs. 657 in Kushalgarh.

131. The invested capital of Abu and Abu Road Dispensaries amounted to Rs. 5,000, the same as in 1900.

132. *Mission Hospitals.*—There are five Mission Hospitals in Rajputana, *viz.*, 2 at Ajmer, 1 at Nasirabad, 1 at Udaipur, and 1 at Jodhpur—one less than in the previous year. A Zenana Hospital at Jaipur opened last year was closed during the year under report.

133. In the Mission Hospital at Ajmer 18,104 new out-door patients were treated, the re-attendance or old cases treated numbered 60,167 and the in-door patients 167, there were 1,321 operations performed, 59 of which have been described as major operations under the old nomenclature of diseases, 4,566 new out-patients were treated in the Women's Hospital at Ajmer, the old cases or re-attendance numbered 11,013, the in-patients 257 and the operations 415, of which 32 have been described as major operations. Besides 2,177 visits were paid by the Hospital staff to people at their houses, and medicine or medical advice given. In Nasirabad 7,484 new out-door patients were treated, the old cases or re-attandance numbered 22,362 and the in-door patients 485, there were 573 operations performed, of which 40 were major operations. In Udaipur 27,718 new out-door patients were treated, the old cases or re-attendance numbered 60,671, the in-patients 708 and the operations 2,211, of which 48 have been described as major operations. In Jodhpur 8,891 new patients were treated, the old cases or re-attendance numbered 41,302, the in-patients 142 and the operations 1,098, of which 117 have been described as major operations. This information is collected from the Annual Report of the Rajputana Presbyterian Mission.

134. *Railway Hospitals.*—There are 6 Railway Hospitals on the Rajputana-Malwa Railway within the limits of Rajputana, *viz.*, 1 at Abu Road, 1 at Sojat Road, 2 at Ajmer, 1 at Phulera and 1 at Bandikui.

135. During the year under report 74,872 patients were treated in the above hospitals, *viz.*, 51,806 at Bandikui, 9,431 at Ajmer, 7,563 at Sojat Road, 4,163 at Abu Road and 1,909 at Phulera.

136. *Inspections.*—The Residency Surgeon and Chief Medical Officer in Rajputana inspected the following institutions during the past season: —

137. *Hospitals and Dispensaries.*—The Hewson General Hospital, the Residency Hospital and the Jaswant Female Hospital at Jodhpur, the Bhagwan Dass and Agency Hospitals at Bikaner, the Lansdowne, Walter Female and Residency Hospitals at Udaipur, the Raj Dispensaries at Dungarhpur, Kishengarh and Partabgarh, the Agency Hospital and Charitable Dispensary at Deoli, the Bundi Dispensary, the Main Dispensary and Victoria Hospital at Kotah, the Chaoni Dispensary and Croft's Female Hospital at Jhalrapatan, the Mayo, Lansdowne and Residency Hospitals and Puranibasti, Moti Katra and Palace Dispensaries at Jaipur, the General and Lady Dufferin Hospitals at Alwar, the Victoria Hospital, Female and City Dispensaries at Bharatpur, the Dholpur Dispensary, the Kekri Dispensary in Ajmer, the General Hospital and Police Dispensary at Ajmer, as well as all the Imperial Service Troops Hospitals.

138. Vaccination was inspected at all these places and also *en route*.

139. *Jails.*—The jails inspected were those of Jodhpur, Bikaner, Udaipur, Dungarpur, Kishengarh, Partabgarh, Bundi, Kotah, Jhalawar, Jaipur, Alwar, Bharatpur, Dholpur and Ajmer.

140. *Sale of Quinine.*—During the year 1901, quinine was offered for sale at 144 against 185 post offices in the previous year. The total sales effected amounted to 230 packets of 102 powders each, equal to 23,460 doses of 5 grains each, against 71,004 doses of 5 grains each in the previous year. The falling off in sales may be attributed to the much less prevalence of malarial fevers and the general healthiness of the year.

141. The largest quantity disposed of was in Marwar, where 65 packets equal to 6,630 doses of 5 grains each, in Mewar 46 packets equal to 4,692 doses of 5 grains each, in Sirohi 39 packets equal to 3,978 doses, and in Jaipur 31 packets equal to 3,174 doses of 5 grains each were sold.

142. The question regarding the supply of quinine packets for sale to the post offices in Rajputana direct by the Superintendent of the Aligarh Jail has

not yet been decided by the Government of India, and consequently the Agency and Residency Surgeons have been instructed not to get quinine packets lying unsold with the Post Masters back from them till the above question is finally settled.

SECTION III.—JAILS.

143. *Ajmer.*—The daily average number of prisoners in the Ajmer Jail fell from 698·36 in 1900 to 469·82 in 1901, the total treated fell from 318 to 184, the daily average sick from 14·57 to 7·58, the mortality from 54 to 17, and the death-rate from 77·32 to 36·18 per mille of average strength.

144. The mortality of the Ajmer Central Jail compares unfavourably with that of the better managed of the Jails in Native States, *viz.*, Ajmer 36·18, Alwar 5·20, Bharatpur 7·67, Bikaner 11·78 and Jodhpur 15·18. The Ajmer Jail Superintendent's explanation that the large mortality was due to the effects of famine in the previous years, 1899-1900, would apply with at least equal force to the jails in Native States.

145. The Ajmer Jail used to be one of the healthiest jails in India, and the present comparatively high mortality is to be attributed partly to over-crowding and partly to scanty water-supply. The Residency Surgeon and Chief Medical Officer, therefore, suggests reversion to the old plan of transferring surplus prisoners to Agra until such time as the number of prisoners becomes normal.

146. The number of prisoners will probably not exceed the capacity of the jail from next year until there is another famine.

147. It is hoped that the revised Jail Manual for Ajmer Central Jail will be completed soon. It will be useful as a guide to the Jail Superintendents in Native States. A number of improvements proposed by the Jail Superintendent and Inspector General of Jails, United Provinces of Agra and Oudh, and sanctioned by the Local Government, are still awaiting completion.

148. The review by the Commissioner, Ajmer-Merwara, on the strength, disposal, classification, health, employment and conduct of prisoners, nature of sentences, jail manufactures, and expenditure of the Ajmer Jail is given as Appendix A of the Report, together with connected statements.

149. In the Ajmer Jail malarial fevers and spleen diseases gave rise to 25 per cent. of the total treated against 26 in the previous year and 12 against 13 per cent. of deaths from these causes. Lung and respiratory diseases contributed 14 per cent. of the sickness against 16 per cent. in 1900 and 35 against 20 per cent. of the mortality, and dysentery and diarrhœa to 7 against 14 per cent. of sickness and 18 against 33 per cent. of deaths. Eye diseases rose from 1 to 4 per cent., ulcers from 2 to 9 per cent. and skin diseases from 1 to 4 per cent. of the total treated. There was no cholera.

150. Of the 17 deaths which occurred in this Jail, 15 were convict males, 1 under-trial and 1 civil prisoner. Two of the convicts died of asthma, 2 of general debility, 3 of pneumonia, 2 of heat-apoplexy, 1 of diarrhœa and the remaining 5 of other diseases. The under-trial prisoner died of remittent fever, and the civil prisoner, who was an old man of 60, died of diarrhœa.

151. *Native States.*—Returns have been received from 20 Jails in Rajputana as in the previous year.

152. The daily average number of prisoners in these Jails fell from 6,603·39 in 1900 to 5,618·72 in 1901, and the total treated in hospitals fell from 7,062 to 3,987, which may partly be attributed to the greater healthiness of the season in comparison with the previous year, and partly to improved Jail management. The daily average sick fell from 253·07 to 148·92, the mortality from 1,420 to 233 and the death-rate from 215·04 to 41·47 per mille.

153. In the Jails of Native States malarial fevers and spleen diseases gave rise to 33 per cent. of the sickness against 24 in the previous year, and 12 against 6 per cent. of deaths, lung and respiratory diseases to 10 against 8 per cent. of total treated and 27 against 9 per cent. of the mortality and dysentery and diarrhœa to 14 against 33 per cent. of sickness and 31 against 54 per cent. of deaths. Injuries only caused 2 per cent. of the deaths.

154. There was no cholera in the Jails of Rajputana during the year 1901.

155. *Jodhpur.*—The Jail is in good order. The admission fell from 441·39 to 396·95 per mille of average strength, the daily average sick from 12·14 to 10·78 and the death-rate from 117·58 to 15·18, which is due partly to locating of

surplus prisoners in the old Jail, and partly to the distribution of anti-malarial pills consisting of quinine, iron and arsenic for a period of 3 months to all the prisoners as a prophylactic. Out of 14 deaths reported, 3 were from diarrhœa, 2 from malarial fevers, 2 from debility and anæmia, 2 from diseases of skin, 2 from respiratory system, 1 from diseases of nervous system, 1 from diseases of circulatory system and 1 from diseases of liver. A separate barrack for under-trial prisoners is still required.

156. *Bikaner.*—This Jail is in excellent order as hitherto and the prisoners are well looked after. The death-rate has fallen from 18·96 per mille in 1900 to 11·78 in the year under report. This is one of the best managed jails in India, both from a medico-sanitary and a financial point of view.

157. *Jaipur.*—In the Central Jail at Jaipur over-crowding still exists notwithstanding a new barrack for 70 prisoners has been constructed. The death-rate in this jail fell from 62·51 per mille of average strength to 23·03. In the District Jail a new barrack has been completed and numerous petty works have been carried out; the date-rate in the jail also fell from 22·31 to 12·27 per mille of average strength.

158. *Kishengarh.*—The Kishengarh Jail is in good repair and clean. There were 7 deaths against noen in the previous year. The under-trial prisoners are still in the old Jail at the city, which is in a deplorable condition and totally unfit for the accommodation of under-trial prisoners.

159. *Alwar.*—The Alwar Jail is in very good order, and the mortality and daily average sick have fallen considerably; the former from 35·18 to 5·20 per mille and the latter from 33·60 to 22·55 per thousand. There were only 2 deaths, 1 from sunstroke and the other from chronic bronchitis. A European Superintendent has been appointed and is doing well. The jail guard is composed of an excessive number of superannuated sepoys. The number could be largely reduced without extra expenditure and with much increased efficiency.

160. *Bharatpur.*—The Bharatpur Jail is in very good order, the health of the prisoners has been good and the mortality very low. Major Drake-Brockman, I.M.S., has done much to improve the condition of the prisoners in this jail.

161. *Dholpur.*—The mortality in the Dholpur Jail was 89·03 per mille of average strength against 120·19 in the previous year. This abnormal rate of mortality is apparently due to the wretched accommodation at present provided. Sanction has been accorded for a new up to date jail at a cost of over a lakh and-a-half; the building has been already commenced and it will be a credit to the administration when finished.

162. *Kotah.*—The mortality in the Kotah Jail is very large, *viz.*, 52. Kotah shares with Udaipur the unenviable notoriety of having the largest actual number of deaths during the year under report. The deaths from dysentery and diarrhœa and lung diseases were excessive. There has been a good deal of over-crowding during the year.

163. *Udaipur.*—The mortality in the Udaipur Jail has fallen very considerably, *viz.*, from 437·07 to 101·78 per mille of average strength. One double-storied barrack for 100 prisoners was completed and occupied during the year, and a new work-shop is being built. It is unfortunate that this jail was built on the contaminated site of an old Fort.

164 *Partabgarh.*—The mortality in this jail fell from 218·52 to 90·21 per mille of average strength. It is intended when funds are available to build a new jail on modern principles.

165. *Banswara.*—There has been some improvement in the health of the prisoners of this jail during the year under report; however, much cannot be expected until a new jail is built on a healthy site.

166. *Dungarpur.*—The Dungarpur Jail is much better kept than last year. There is still dreadful over-crowding which can be relieved by the removal of prisoners to a temporary enclosure until a new proposed jail on a healthy site be constructed. The death-rate has fallen from 1,804·07 to 128·76 and daily average sick from 191·38 to 115·10 per mille of average strength. A site has been selected for a new jail which will be taken in hand when funds are available.

167. Although the jails were nearly all greatly over-crowded throughout the year, prisoners in the Native States are now much better cared for than

hitherto. A few of the old jails are, however, still very defective in drainage, construction and management and these defects require early remedy.

QUALIFIED MEDICAL STAFF.

168. There were 10 Commissioned Medical Officers employed in Rajputana at the end of the year under report, besides 2 Military Medical Officers, *viz.*, 3 Residency Surgeons at Jodhpur, Jaipur and Udaipur, 4 Agency Surgeons at Alwar, Bharatpur, Kotah and Deoli, and 2 Civil Surgeons at Ajmer and Bikaner. Resides these Lieutenant-Colonel D. ffrench Mullen, I.M.S., late Civil Surgeon, Ajmer, and Administrative Medical Officer in Rajputana, was appointed Residency Surgeon and Chief Medical Officer in Rajputana, with his head-quarters at Mount Abu, with effect from the 19th May 1901.

169. The Civil Surgeon, Ajmer, is Medical Officer, Merwara Battalion, the Agency Surgeon, Haraoti and Tonk, is Medical Officer of the Deoli Irregular Force, the Medical Officer, Mewar Bhil Corps, is the Civil Surgeon, Dungarpur, and Superintendent of the Civil Dispensaries of Kotra and Kherwara, and the Medical Officer, Erinpura Irregular Force, inspects the Sheogunj Dispensary adjacent to the Cantonment of Erinpura.

170. One Civil Medical Officer and 1 Warrant Medical Officer were employed on plague duty temporarily at Bandikui and Ajmer, respectively, and 1 Civil Assistant Surgeon at Abu Road.

171. Two Assistant Surgeons are permanently employed at Ajmer and Beawar, 3 at Jodhpur, 4 at Jaipur, 1 at Bharatpur, 1 in Bikaner and 1 at Jhalrapatan, 1 ex-Assistant Surgeon is in temporary charge of the Northern India Salt Revenue Dispensary at Sambhar.

172. There were 22 permanent Hospital Assistants employed by the British Government, *viz.*, 8 in Ajmer-Merwara, 9 in Political Agencies and Salt Dispensaries, 2 in Abu and Abu Road Dispensaries, and a reserve of 3 to act for the above from time to time.

173. There were 134 qualified Hospital Assistants lent by Government and permanently employed by Darbars, and a reserve of 14 more to act temporarily for them and to do plague, famine and cholera duty in Native States.

174. There are still 16 Local Class Hospital Assistants employed, *viz.*, 7 in Bharatpur, 6 in Jaipur, 2 in Dholpur, and 1 in Mewar. Besides these there are 6 Local Class Native Doctors who are locally entertained by the different States in Rajputana, *viz.*, 2 in Bharatpur, 1 in Marwar, 1 in Bundi, 1 in Mewar, and 1 in Kushalgarh. It is hoped that these Local Class Native Doctors will shortly be replaced by qualified men from the list.

175. There were eight Military Hospital Assistants employed with the Imperial Service Corps of Rajputana.

176. Four Lady Doctors were employed in Rajputana as in the previous year, and there were eight female Hospital Assistants against twelve in 1900. There are at present seven vacancies of female Medical Subordinates in Rajputana, *viz.*, one at Karauli, one at Tonk, two at Jodhpur, 1 at Jaipur, one at Kotah and 1 at Udaipur.

FEMALE HOSPITALS AND EDUCATION OF WOMEN.

177. *Ajmer.*—Miss Campbell continued to superintend the Mission Hospital for women at Ajmer till July, when Dr. Jessie Smith was transferred from Beawar and placed in charge of this hospital. Much good work has been done by this lady both in the hospital and in the people's houses. The number of patients treated and the other medical work done is shown under Mission Hospital.

178. *Beawar.*—A qualified female Hospital Assistant, Mrs. Samuel, in charge of the Female Dispensary at Beawar, resigned her appointment in February 1901. In April, Female Hospital Assistant Jankey Bai was appointed and put in charge of this institution. There has been a decrease in the number of patients treated which was due to non-employment of an Hospital Assistant for about two months. Eighty-six purdahnashin women were visited at their homes, of this number 18 were cases of diseases peculiar to women; four maternity cases were also attended by Female Hospital Assistant Jankey Bai.

179. *Alwar.*—Miss Lauder has been in charge of the Dufferin Hospital at Alwar throughout the year and has done excellent work. There were 478

in and 12,397 out-patients treated during the year under report against 550 in and 12,142 out-patients in the previous year. Fifty-two major operations were performed against 50 in 1900, of which two were obstetric operations.

180. *Tonk.*—Miss D'Souza has been in charge of the Walter Female Hospital at Tonk throughout the year with the exception of three months on privilege leave, and Miss Benjamin officiated for her. It is regrettable to hear that she (Miss D'Souza) intends to resign her appointment as she is very highly spoken of by the Agency Surgeon and well liked by the people. The number of in and out-door patients treated in the hospital was 391 and 8,407 against 371 and 7,973, respectively, in the previous year. No female Hospital Assistant has as yet been obtained to replace the one already dismissed.

181. *Jodhpur.*—Miss Arnott has been in charge of the Jaswant Female Hospital at Jodhpur since the 11th September 1901. There has been a considerable falling off in the number of both in and out-door patients during the year under report which is attributed to the death of Miss C. Adams on the 22nd April 1901, who did good work and was well liked in Jodhpur. The hospital was in charge of Hospital Assistant Miss Helen Dass from the 13th March to the 10th September 1901. Hospital Assistant Miss Helen Dass has resigned, signifying her intention to resume her studies in the Hyderabad School of Medicine.

182. *Udaipur.*—Miss Graham has been in charge of the Walter Zenana Hospital at Udaipur throughout the year. The number of patients treated shows a falling off when compared with the previous year, which is partly attributed to the absence on two months' privilege leave of the Lady Doctor and partly to the healthiness of the year. This institution is not popular and Miss Graham's services are not extensively utilized. There is no Hospital Assistant at present in the hospital.

183. *Jaipur.*—A qualified Female Hospital Assistant, Birji Bai, has been in charge of the women's ward of the Mayo Hospital at Jaipur throughout the year. The average number of female patients was 25·30 against 41·04 in the previous year, which is due to the dismissal of Female Hospital Assistant Bismillah Khanum on the 14th May 1901. Five new wards to accommodate patients from the main ward have been constructed. The Dhai class has been kept up throughout the year. Endeavours are being made to get a Women's Hospital established in Jaipur city where it is much needed for purdahnashins.

184. *Bikaner.*—Female Hospital Assistant Bibi Asrafi has been in charge of the Female wing of the Bhagwan Dass Hospital at Bikaner and Mrs. Moji Ram (Elizabeth) at Churu in Bikaner throughout the year; both have worked satisfactorily.

185. *Bharatpur.*—Bibi Rup Kuar has been in charge of the Female Hospital at Bharatpur throughout the year. There were 226 in and 6,240 out-patients treated during the year under report against 233 in and 7,279 out-patients in 1900; this decrease is attributed to the healthiness of the year. A Dhai class has been kept up throughout the year.

186. *Kotah.*—Miss Bessie Karimulla has been in charge of the Victoria Hospital at Kotah up to the 20th June 1901, when she resigned her appointment, and after that date Hospital Assistant Mrs. Phulmani George, the Second Hospital Assistant, held charge till the end of the year. There has been a falling off in the number of patients treated in 1901. A Midwifery class and a class for training compounders were started on the 15th February 1901, but it is not a success.

187. *Jhalrapatan.*—Miss Helen Singh, a qualified Hospital Assistant, has been in charge of the Croft's Female Dispensary throughout the year. The total number of patients treated during the year rose from 2,636 to 8,416, an increase of 5,780. This dispensary is an out-door dispensary and there is no accommodation for in-door patients.

188. *Karauli.*—Mrs. George, a qualified Female Hospital Assistant, was in charge of the Karauli Female Dispensary up to the end of April 1901, when she resigned her appointment. Since then the dispensary has again been placed in charge of the male Hospital Assistant attached to the Sudder Dispensary. There has been a decrease in the number of both in and out-door patients for want of a Female Hospital Assistant. Endeavours are being made to obtain the services of a qualified Hospital Assistant.

189. Mrs. Ines, a qualified nurse, is still employed by the Sirohi Darbar to look after the ladies and children in the palace, but she has no opportunity of working amongst the towns-people.

190. The Jodhpur Darbar are educating two female pupils at the Agra Medical School.

191. There is great difficulty in getting either Lady Doctors or Female Hospital Assistants of the right stamp, and, when they are obtained, they are seldom content to stay.

192. Miss Adams at Jodhpur was a decided success and a credit to her profession. Her death from cancer was a great loss to the Jodhpur Darbar. Her successor, Miss Arnott, has sent in her resignation after two months' stay. Another lady has been selected to take her place.

193. Of the Female Hospital Assistants only one or two have given satisfaction, and there is great difficulty in filling the existing vacancies for lack of candidates.

Imperial Service Troops.

194. The three Regiments of Cavalry, the Camel Corps, the two Transport Corps and the two Regiments of Imperial Sersvice Infantry in Rajputana have all got good, well equipped hospitals, which have been regularly inspected by the Residency Surgeon and Chief Medical Officer in Rajputana; the recruits of this force have also been inspected from time to time and found to be of good physique.

195. The Bikaner Corps and Alwar and Jodhpur Infantry returned from China in June 1901.

Insane.

196 There were 11 lunatics (4 females and 7 males) in the Ajmer Central Jail during the year under report, 3 of whom were transferred to the Lunatic Asylum at Lahore, 1 sent to his uncle, 1 made over to the manager of the Durgah for safe conduct to his home in Peshawar, and the remaining 6 were discharged cured; thus no lunatic remained in the jail at the close of the year. No insane died during the year. Two of the lunatics were under the influence of drugs when brought to the jail, but they gradually recovered.

197. There is no Lunatic Asylum attached to the Civil Hospital at Ajmer, and consequently the insane are confined in the Central Jail where there is a set of six cells.

198. In Native States Hospitals and Dispensaries there were 185 insane treated during 1901, of whom 60 were cured, 11 made over to the custody of their relatives, 6 relieved, 9 died and 99 remained under treatement—*vide* Table given below:—

State.	Remained on 1st January 1901.	Admitted.	Total.	Cured.	Discharged otherwise.	Relieved.	Died.	Remaining on 31st December 1901.
Jaipur . . .	79	24	103	27	9	...	6	61
Jodhpur . .	5	4	9	3	...	...	...	6
Sirohi . . .	...	2	2	2	...	...	...	...
Bikaner . .	10	12	22	10	...	...	...	12
Bharatpur . .	8	9	17	2	2	6	1	6
Alwar . . .	7	14	21	10	...	...	1	10
Kotah . . .	2	...	2	...	...	...	1	1
Jhalawar . .	...	1	1	...	...	...	...	1
Udaipur . .	4	4	8	6	...	...	...	2
Total .	115	70	185	60	11	6	9	99

199. No insane were admitted to the Jaisalmer and Karauli Lunatic Asylums during the year under report.

200. No lunatics were admitted in 1901 to the Lunatic Asylum at Jaipur from the Kishengarh State.

201. Lunatic Asylums are required at Sirohi, Dholpur, Tonk, Shahpura, Bundi, Kishengarh, Partabgarh, Banswara and Dungarpur. The Residency Surgeon and Chief Medical Officer has suggested that a Central Asylum might be started at Ajmer supported by the Native States, in which the insane would be scientifically treated and cared for by an experienced staff.

D. FFRENCH-MULLEN, M.D., *Lieut.-Col., I.M.S.*,
Residency Surgeon and Chief Medical Officer in Rajputana.

Mount Abu,
The 19th May 1902.

APPENDIX A.

AJMER JAIL 1901.

Lieutenant-Colonel D. ffrench-Mullen, I.M.S., the Civil Surgeon of Ajmer, held charge of the Ajmer Jail until the 18th May 1901, when he was succeeded by Lieutenant-Colonel H. N. V. Harington, I.M.S.

Population.

2. The year opened with a Jail population of 493 and ended with one of 476. The total number of admissions was 1,583 as compared with 4,548 in 1900. The daily average strength declined from 698·36 in 1900 to 469·82.

Disposal of convicts.

3. In the course of the year 22 convicts were released on appeal, 626 on expiry of sentence, 32 on payment of fine, and 110 under the remission rules, while 5 Bharatpur State prisoners were set at liberty under the orders of the Local Administration. Eight convicts were transferred to other Jails, 15 died, and 424 remained in the Jail at the close of the year.

Disposal of under-trial prisoners.

4. Of the 821 under-trial prisoners, 229 were released, 524 were convicted and sentenced, 16 were transferred, and 1 died, 51 remaining in the Jail at the end of the year.

Disposal of civil prisoners.

5. Of the 13 civil prisoners, 11 were released, 1 died, while the remaining 1 was under detention when the year closed.

Classification of convicts.

6. Of the 777 convicts admitted during the year, 4 were Christians, 217 Muhamedans, 555 Hindus and 1 was a Buddhist.

By age classification, 27 were under sixteen years of age, 658 between sixteen and forty, and 92 between forty and sixty.

Of the 695 male prisoners, 287 were agriculturists, 230 labourers, 33 shop-keepers and traders, 4 artizans, 51 domestic servants, 39 Government servants and 51 were without occupation. Of the 82 female convicts, 34 were married, 9 unmarried, 38 widows and one was a prostitute.

Nature of sentence.

7. Of the 777 convicts admitted during the year, 53 were sentenced to simple and 675 to rigorous imprisonment. In the case of 15 convicts solitary confinement was awarded in addition to rigorous imprisonment, while 34 were sentenced to rigorous imprisonment and to whipping.

The number of convicts sentenced to terms of imprisonment not exceeding one month was 295: 355 were sentenced to imprisonment exceeding one month but less than six months; 67 to terms of imprisonment above six months but not exceeding one year; 32 to imprisonment above one year but not exceeding two years, 13 to imprisonment exceeding two years but not exceeding five years; 6 to imprisonment above five years but not exceeding ten years. Five convicts received sentences of transportation for life and 3 for a term, while 1 was capitally punished.

Previous convictions.

8. The total number of previously convicted persons incarcerated during the year was 144 against 141 in 1900. The ratio per cent. of the number having previous convictions to the total admissions was 18·53 as compared with 5·85 in the preceding year.

Employment of convicts.

9. The daily average number of convicts under sentence of labour on working days was 386·03. Of these, 241·26 were employed on Jail manufactures, 122·63 were engaged on prison duty, 11·17 were employed as prison officers, 3·50 were exempted from labour on account of their health and 7·47 were sick.

Conduct of prisoners.

10. The general conduct of the prisoners was good. The number of Jail offences rose from 64 in 1900 to 140 during the year. All the offences related to breaches of Jail discipline. In the opinion of the Superintendent the increase has been due to the more careful reporting of offences The prisoner who escaped from custody in 1899 is still at large There were no escapes during the year.

Health of prisoners.

11. The health of prisoners was good. The number of admissions into the Jail Hospital was 173 as compared with 308 in 1900. The number of deaths declined from 54 in 1900 to 17.

Juvenile offenders.

12. The number of juvenile offenders confined in the Jail decreased from 64 in 1900 to 32 during the year. Twenty-eight juvenile convicts were released and only 4 remained in the Jail at the close of the year. The conduct of the boys was good.

Jail manufacturers.

13. The cash profit from the Jail manufactures rose from Rs. 3,032 in 1900 to Rs. 3,670 during the year. The cash earnings per head also increased from Rs. 5-7-2 to Rs. 9-8-1.

14. The expenditure incurred in guarding and maintaining prisoners during the year 1901 amounted to Rs. 29,668, as compared with Rs. 48,045 in 1900, namely:—

Expenditure.

	1900. Rs.	1901. Rs.
Diet	22,474	10,400
Establishment	8,603	8,546
Hospital charges	885	625
Clothing	1,649	1,227
Miscellaneous	1,685	1,319
	35,296	22,117
Expenditure on buildings debitable to the Public Works Department	6,816	4,918
Amount spent by Magistrates for guarding and maintaining under-trial prisoners	5,933	2,633
TOTAL	48,045	29,668

The average cost per prisoner fell from Rs. 68-12-9 in 1900 to Rs. 63-2-4.

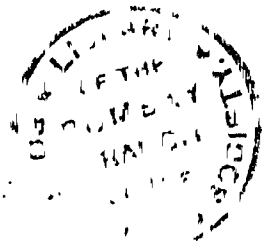
15. The net cost of the Jail to Government was Rs. 23,960 as compared with Rs. 40,601 in the preceding year. Details are given below:—

Net cost to Government.

	1900. Rs.	1901. Rs.
Total expenditure	48,045	29,668
Deduct:—		
(i) Maintenance charges of Native State prisoners recovered from the States concerned	4,412	2.038
(ii) Profits from Jail manufactures	3,032	3,670
	7,444	5,708
Net cost of Government	40,601	23,960

A. TUCKER,

Commissioner, Ajmer-Merwara.



Showing the Distribution of the Prisoners of all classes confined in the Ajmer Central Jail during the year 1901.

* Of this number, 19 Boys under 16 years. | † Of this number, 3 Girls under 15 years. | ‡ Kamla Prisoners. | § *Vide* Chief Commissioner's No. 1954 G.—194, dated the 26th April 1901.

NOTE. 1.—This and the other statements numbered 1 to 7 only convicted prisoners are to be included.

2.—Debtors and others detained for default of Government revenue will appear in No 8.

3.—The "Total," column 6, is obtained by adding together the totals of columns 4 and 5, and represents with sufficient accuracy the number of different individuals who have been in prison during the month.

4.—The "Total population," column 8, is the sum of columns 6 plus 7, and necessarily includes many who are counted more than once.

5. The "Daily average number," column 3, is obtained by adding together the number presented on each day of the month, *vide* column 2, and dividing the whole by the number of days in the month.

6.—When prisoners are transferred from one Jail to another on their way to undergo transportation beyond seas, they should be entered by the transferring Jail in column 6 B; and by the Jail which received them they should be entered in column 7 B. When prisoners sentenced to transportation beyond seas are despatched from any Jail, so that they will leave the Province without passing through any other Jail in it, they should be entered in column 11.

It will be observed that transportation applies only to those prisoners sent *beyond seas*.—Transportation to a Central Prison is regarded merely as a transfer.

7.—When the gangs are employed extramurally under the orders of Government No. 1632-43, dated 28th October 1869, they should be considered as forming a separate Jail, and the name of the Jail, that is, of the place where they are employed, should be entered in italic sin each statement.

V. HARINGTON, *Lieut.-Col., I.M.S.,*
Superintendent, Central Jail, Ajmer.

Note.—It is of importance that the particulars given in this, and also in No. 3, should not include the same individual more than once, and hence all transfers should be omitted.
The Totals should correspond with the number in column 5, Statement I: "Imprisoned during the month." But they should do so with the "Total", column 6, for January only, as the number remaining on the last day of the previous year (31st December) is to be included in that month.

Statement No. III.—*Statement showing the convicts admitted into the Jail at Ajmer during the year 1901 and those remaining on the 31st December of that year according to the nature and length of sentence.*

The female column should be filled in *italics*.

Total .	440·77	11·17(c)	2·53	15(a)	2(b)	Total . 15

(a) The nature of the offices held by convicts should be given in column of remarks.
(b) Detail of the nature of punishments ordered should be given as directed in paragraph 19 of the Government Review on the Jail Reports for 1884.
(c) Column 3 should tally with column 7—B of Return No. XII. Column 5 should show the total number of convicts employed as Warders, etc., and not merely the total sanctioned number of situations.

V. HARINGTON, *Lieut.-Col., I.M.S.,*
Superintendent, Central Jail, Ajmer.

AJMER JAIL OFFICE,
The 25th February 1902.

STATEMENT No. IX.—*Statement showing the Scales of Diet in force in the Ajmer Central Jail during the year 1901.*

1	2	3	4
Diet scales of Labouring Prisoners.	Diet scale of non-labouring prisoners.	Punishment diet scale.	Note of any change effected in diet scales during the year.
Atta of Gram 1/3 } 12 Chittaks daily. „ Barley 2/3 } Dal alternately . 2 Chittaks. Vegetables alternately 8 „ Oil with vegetables 4/25 „ Salt „ „ 1/4 „ „ „ Dal 1/6 „ Chillies with vegetables 2 M. „ „ Dal . 1 „ Fuel . . . 4 Chittaks.	Atta 8 chittaks on Sunday and Monday and 10 chittaks on other days. Other articles are same as for labouring prisoners.	Labouring prisoners 8 chittaks atta, with the usual quantity of salt; the period of this diet is ninety-six consecutive hours.	A mixture of bajra and wheat was given to the prisoners up to the 11th February 1901, after which barley and bajra were given to the convicts up to the 1st May 1901; after the latter date the ordinary mixture of the Jail, *viz.*, gram and barley, was resumed and has been given to the prisoners up to the present time. A mixture of moth and bajra was also tried in the interval, but did not agree with the prisoners and had therefore to be given up.

NOTE.—A complete statement of all the diet scales in use for labouring prisoners according to length of sentence should be given in column 1, with details as to the articles used, and the variations in different days of the week.

V. HARINGTON, *Lt.-Col., I.M.S.,*
Superintendent, Central Jail, Ajmer.

AJMER JAIL OFFICE;
The 25th February 1902.

STATEMENT No. X. (*Financial*)—*Showing the expenditure in guarding and maintaining the prisoners in the Central Jail at Ajmer during the year 1901, excluding the cost of building new Jails, of Additions, Alterations, or Repairs.*

1	2	3				4		5		6		7			8		9		10	11	12	13
		Average number of Prisoners.				Rations.		Establishment.		Merwara Battalion.		Hospital charges.			Clothing.		Contingencies.

When prisoners of different classes are confined in the same Jail, the expenditure on establishment and other items with which all are concerned should be divided over all. The cost per head under any item of expenditure is to be calculated on prisoners actually concerned in it or contributing to it, and not otherwise. Hospital charges (column 7) should include rations and also the cost of medicines supplied from the Bazar and the Medical Store Depôt. In this series (Financial) annas and pies are only to be shown where there are columns for them.

STATEMENT No. XII.—*Showing the employment of convicts in the Jail at Ajmer during the year 1901.*

FROM

THE HONOURABLE MR. A. H. T. MARTINDALE, C.S.I., I.C.S.,
Agent to the Governor General, Rajputana,
and Chief Commissioner, Ajmer-Merwara,

To

THE SECRETARY TO THE GOVERNMENT OF INDIA,
FOREIGN DEPARTMENT.

Dated Abu, the 24th November, 1903.

SIR,

WITH reference to the correspondence ending with your letter No. 766 I.A., dated the 18th February 1903, I have the honour to forward the Annual Report on Sanitation, Dispensaries and Jails in Rajputana for the year 1902 and in Vaccination for 1902-1903, prepared by Lieutenant-Colonel H. N. V. Harington, I.M.S., Officiating Residency Surgeon and Chief Medical Officer in Rajputana. Colonel Harington's report, which went into considerable detail, has been much curtailed, a copy of the original report being forwarded direct to the Director General, Indian Medical Service.

2. The year 1902 was marked by scarcity and famine which prevailed in Ajmer-Merwara and in some of the Native States of Rajputana. Prices ruled high, and the rainfall during the south-west monsoon, though sufficient to bring the relief operations to a close, was generally below the average.

3. Notwithstanding these unfavourable conditions, the year was not generally unhealthy, and there was a marked recovery on the part of the people throughout the Province from the depression caused by previous bad seasons. There was some improvement in the registration of vital statistics. The birth-rate in Ajmer-Merwara in 1902 compares favourably with that of the preceding year. The decrease in the number of deaths was slight, but there was a noticeable excess of births over deaths registered. The figures available for the Native States are incomplete, the registration of vital statistics being practically confined to the capital cities. The results shown, however, are not unsatisfactory. The average birth-rate for all the States rose from 14·52 in 1901 to 18·38 in 1902, whilst the death-rate was only 17·10 against 16·44 in the previous year.

4. Although, as remarked above, the year 1902 was on the whole healthy, an epidemic of cholera claimed 1,551 victims, whilst malarial fever assumed a severe type in the Bharatpur State, where the death-rate at the capital was higher than in any other town in the Province. Bubonic plague was also

imported into Rajputana, where 1,070 cases and 869 deaths are reported to have occurred between January and March 1903.

5. The overcrowding in certain of the Jails in Rajputana to which allusion is made in the Report was largely due to the prevailing scarcity and to the corresponding increase of crime. The overcrowding in the Udaipur Jail has since been reduced whilst, as the Government of India are aware, the condition of the Dungarpur Jail has been improved. The new Jail at Dholpur is now approaching completion. The question of providing Banswara and Partabgarh with better jail accommodation is simply a question of funds, both States being heavily indebted owing mainly to famine expenditure.

6. The attention of the Chief Medical Officer has been drawn to the importance of obtaining fuller information regarding the sale of quinine through the Post Office than is contained in paragraph 88 of his present Report. The whole question is under the separate consideration of the Local Administration.

7. The information desired by the Director General, Indian Medical Service, in the memorandum forwarded with your letter No. 766 I.A., dated the 18th February 1903, will be found in paragraphs 23, 24, and 93 of the enclosed Report.

I have the honour to be,

SIR,

Your most obedient Servant,

A. H. T. MARTINDALE,

Agent to the Governor-General, Rajputana, and Chief Commissioner, Ajmer-Merwara.

REPORT

ON

SANITATION, DISPENSARIES, AND JAILS IN RAJPUTANA FOR 1902,

AND ON

VACCINATION FOR THE YEAR 1902-1903.

SECTION I.—SANITATION AND VACCINATION.

METEOROLOGY AND ITS RELATION TO FOOD-SUPPLY.

1. The rainfall was below the average in Ajmer-Merwara during the year under report, and was deficient in most of the States of Rajputana. The total registered in Ajmer was 17·04 inches as compared with an average of 18·67 inches. The total in Beawar was only 12·81 inches. There were good rains in the Udaipur, Banswara, and Partabgarh States.

VITAL STATISTICS, BIRTHS, AND DEATHS.

Births in Ajmer-Merwara.

2. According to the Birth Return for 1902, there were 17,207 births registered in Ajmer-Merwara against 7,679 in 1901 and 7,958 in 1900. The Civil Surgeon, Ajmer, reports that this considerable increase in births registered is the result of recovery from famine conditions and probably also of improved registration. Of the total births registered, 9,213 were males and 7,994 females, and the birth-rate per mille was 36·08 against 16·10 in the previous year and 14·67 in 1900. The percentage of male to female births was 115·25 against 119·15 in 1901.

3. The birth-rate exceeded the death-rate in 20 out of 23 circles against *nil* in the previous year.

Deaths in Ajmer-Merwara.

4. In this Division the total number of deaths registered in 1902 was 15,672 against 15,798 in 1901, a slight decrease of 126. This gives a death-rate of 32·86 per mille of population against 33·13 in the previous year. The highest mortality was recorded in the first and the lowest in the third quarter of the year.

5. There were only three deaths recorded from small-pox in Ajmer-Merwara against four in the previous year.

6. Out of the total number of deaths registered during the year under report, 8,216 occurred amongst males and 7,456 amongst females, while in 1901 the mortality amongst males and females was 8,321 and 7,477, respectively.

7. The deaths registered exceeded the births in three out of the 23 circles, while in the preceding year they exceeded in all circles.

8. At Ajmer there is an Assistant Health Officer under the Civil Surgeon who investigates personally every death in the City and Suburbs.

TABLE I.—*Births and Deaths in Native States.*

NAME.	Population according to Census, 1901.	BIRTHS.				DEATHS.										
		Male.	Female.	Total.	Ratio per 1,000 of population.	Cholera.	Small-pox.	Plague.	Fevers.	Dysentery and Diarrhœa.	Respiratory Diseases.	Injuries.	Snake-bites.	All others.	Total.	Ratio per 1,000 of population.

NOTE.—The information required for this table cannot be obtained in full from Jaisalmer. The total, therefore, of column 16 does not agree with the totals of the 9 preceding columns.

Registration of births and deaths in Native States.

9. Registration has been attempted in 18 Native States as in the previous year, but so far with unsatisfactory results.

10. Endeavours are being made to improve the agencies for collecting these statistics which will, it is hoped, be followed by good results.

11. The average birth-rate for all the States was 18·38 per mille of population.

12. There has been a considerable decrease in deaths from fevers and dysentery and diarrhœa in the States of Rajputana during the year 1902, *viz.*, 26,904 and 4,708 against 29,462 and 5,584 in 1901.

Small-pox.

13. The disease appeared in 11 Native States in which 201 deaths occurred during the year under report against 680 in 1901. Out of the total deaths reported there were 67 deaths from the disease in Bharatpur, 38 in Partabgarh, 30 in Dholpur, and 22 in Kotah.

Death-rate in cities from all causes.

14. The reported death-rate in cities ranged from 11·93 per mille of population in Banswara City, to 73·35 in Bharatpur City, and in rural circles from 2·00 in Sirohi State to 22·98 in Partabgarh. The average for all the States was 17·10 per mille of population.

CHOLERA.

TABLE II.—*Number of Cholera cases reported in Ajmer-Merwara and in Native State during the year 1902.*

NAME OF STATION, ETC.		MARCH.		APRIL.		MAY.		JUNE.		JULY.		AUGUST.		SEPTEMBER.		OCTOBER.		TOTAL.		Percentage of deaths to cases.

15. *Ajmer-Merwara.*—During the year under report cholera broke out in the Ajmer-Merwara District, but in mild type. It appeared on the 18th March and ceased on the 5th September 1902.

Cholera.

16. There were only 37 cases of cholera reported from the Ajmer-Merwara District, of which 32 proved fatal, against 61 cases and 50 deaths in the previous year. Twenty-one cases with 16 deaths occurred in the Ajmer District from 20th July to 5th September, and 16 fatal cases in Merwara between March and June.

17. *Native States.*—During the year 2,647 cases of cholera were reported from Native States, 1,519 of which proved fatal against 6 fatal cases in the previous year. It appeared in April and ceased in October 1902.

18. Cholera broke out in epidemic form in the Bharatpur State on the 15th April 1902; 1,267 cases occurred from this malady, of which 723 proved fatal.

19. *Jaipur.*—The first case reported in this State occurred on the 8th May 1902 at Badgaon in Tehsil Gangapur. Up to the 24th October 375 persons had suffered, 300 of whom had died.

20. *Alwar.*—Cholera broke out in Alwar in epidemic form from 1st June and lasted till 28th September, during which time 876 cases and 406 deaths occurred in 41 villages and in Alwar city. The disease was imported from neighbouring States, notably from Bharatpur.

21. Three cases of cholera occurred in the Imperial Service Troops, Alwar, during the year under report of which two died. The cases were treated in separate tents away from Hospital and all precautionary measures adopted.

22. A cholera map is attached which will show the districts infected, the dates of first and last cases, the death-rate per 10,000 of population, and the position of all the dispensary towns.

SANITATION.

23. *Ajmer City.*—The water from the Foy Sagar is freely used for drinking purposes, both in the city and suburbs. As the water of this main source was condemned by the Chemical Examiner in 1900 as non-potable, owing to excess of organic matter, attention is now being given to its surroundings to prevent its contamination by cultivators and graziers. In 1898 the Administrative Medical Officer in Rajputana recommended the removal of the villages (3) situated in the catchment area of the tank, when funds became available, and to

stop manuring and cultivation in or near the bed of the reservoir, as these are sources of contamination, and causes of the excess of the organic matter which has been found in the water when the lake has been low: of these, part of Kazipura village was removed in 1901. The cost of removal of the other two will probably be prohibitive.

24. The Civil Surgeon makes a very unfavourable report regarding the Ajmer Town water-supply from the Foy Sagar Reservoir, but it appears that no analysis of the water has been made since 1900. Hence it is not certain at present that the water which is largely consumed in Ajmer is still as impure as it was formerly reported to be on analysis. The Ajmer Municipality have been requested to procure a fresh analysis of the water. A statement showing the result of the latest analysis is attached (Appendix No. XI.)

25. The sanitary tramway has worked satisfactorily at Ajmer during the year and the trenching grounds have been well looked after.

26. The question regarding the substitution of open saucer drains for covered drains in the principal streets and bazars in the city of Ajmer is still under the consideration of the Municipality.

27. Rules for the improvement of village sanitation which have been introduced in the marginally named villages * worked well. The rules for Pushkar and Todgarh were introduced in the year under report.

Village sanitation.

* Ramsar, Junia, Harmara, and Pushkar in Ajmer District. Beawar, Bhim, Barar, Jawaja, and Todgarh in Merwara District.

28. The Municipal Committee continue to supervise sanitation in Beawar, the streets are clean and well kept, the water-supply is from wells and of fair quality.

29. In the Native States little sanitary improvement was apparent during the year under report, though efforts are being made by some, notably by Jaipur, Jodhpur, Kishangarh, and Alwar. Residency and Agency Surgeons have been encouraged to lose no opportunity, while on tour, of advising village authorities in simple sanitary measures which could easily be carried out. Vaccinators in some States are trained in elementary sanitation, so that they may be able to advise the people among whom their ordinary work lies.

VACCINATION.

30. In Ajmer-Merwara the primary vaccination rose from 10,831 in 1901-1902 to 12,948 in the year under report, an increase of 2,117 operations, and 99·18 per cent. of these were successful. Re-vaccinations rose from 10 to 44 operations. This increase is due to the higher birth-rate and the healthiness of the year.

Ajmer-Merwara.

31. The average number of operations performed by each vaccinator rose from 723 to 866, and the expenditure on this Department rose from Rs. 2,301-3-6 to Rs. 2,507-1-0 in 1902-1903.

32. In Native States there was a very large increase in primary vaccinations, *viz.*, 280,374 against 250,898 in 1901-1902 and the percentage of success to operations performed rose from 98·63 to 98·91 during the year under report. The increase in the number of primary operations performed and in the sucessful percentage both indicate satisfactory progress.

Native States.

33. There were 175 vaccinators employed against 185 in the previous year, 11 vaccinators less in Marwar and 2 less in Bikaner, and one additional vaccinator was employed in Jaisalmer, Dholpur, and Bundi, respectively.

34. The Returns from each Native State show an increase in the number of vaccinations performed during the season under report except in Jaipur, Bharatpur, and Dungarpur.

35. In Jaipur State 81,034 vaccinations were performed against 81,638 in the previous year.

36. In Bharatpur State 39,781 primary vaccinations were done against 46,192 in 1901-1902 and 99·40 per cent. of these were successful.

37. There were 52,904 primary vaccinations performed in Jodhpur State against 33,456 in the previous year, and 99·75 per cent. of these operations were successful. The vaccination returns for the other Native States call for no

special mention. They are all embodied in the appended Tables Nos. XIII to XVII.

38. With regard to the remarks by the Sanitary Commission on the Rajputana Report for 1900, the Residency Surgeon and Chief Medical Officer gave considerable attention to the high percentage of successful vaccinations.

39. Lymph is kept up throughout the year in most of the important States and humanized lymph is generally used. Buffalo calf lymph is also largely employed in several States in Rajputana.

SECTION II.—DISPENSARIES.

APPENDIX No. XVIII.

Number of Dispensaries.

40. There are now 165 hospitals and dispensaries in Rajputana against 166 in the previous year, 1 new dispensary at Ramgarh in Alwar State was established on the 1st November 1902 and 2 dispensaries closed, *viz.*, (1) the Abu Charitable Dispensary owing to its amalgamation with the Rajputana Agency Hospital, Abu, on the 16th July 1902; (2) the Travelling-Dispensary at Alwar on the 6th September. Besides these there are 5 Mission and 6 Railway hospitals open for the treatment of patients.

41. During the year under report the dispensary at Shergarh on account of meagre attendance was transferred to Desuri.

Progress in Hospitals and Dispensaries.

42. The dispensary at Kishangarh was removed in March from an extremely insanitary quarter to a newly constructed building on an improved design, the out-door block and the operating room having been completed.

43. An isolation ward for 8 beds in Bhagwan Dass Hospital, Bikaner, has been constructed.

APPENDIX No. XIX.

Medical Relief.

44. Shows the total number of patients treated, both in-door and out-door, separately during the year under report.

45. One million one hundred and eighty-seven thousand four hundred and one patients of all classes were treated against 1,192,907 in the previous year, a decrease of 5,506, which is due to the healthiness of the year.

46. Of the total number of 1,187,401 patients treated during the year 1902, 17,008 were in-door patients against 17,599 in 1901.

47. The percentage of "cures" for 1902 was 74·37 against 73·02 in 1901, while the percentage of deaths in hospitals was 5·29 as compared with 6·02 in 1901 and 13·76 in 1900.

48. The number of beds available in the hospitals and dispensaries in Rajputana during 1902 was 1,461 (for 909 males and 552 females) as compared with 1,468, *viz.*, for 905 males and 563 females in 1901, and the daily average of in-door patients treated during the year was 913·88 against 897·22 in the previous year.

49. The total number of out-door patients was 1,170,393 in 1902 against 1,175,308 in 1901 and 1,327,551 in 1900. Of the numbers treated in 1902, 1,008,402 attended personally and 161,991 were represented by friends.

50. The daily average of out-door patients increased from 9,554·63 in 1901 to 9,620·26 in 1902. In 1900 it was 11,196·08.

51. In Ajmer-Merwara dispensaries 950 in-door and 59,095 out-patients were treated against 874 in-door and 55,913 out-door patients in the previous year, the increase of 3,258 being chiefly shown in the Ajmer Hospital and Beawar Dispensary, but there was a decrease in the number of deaths and the percentage of deaths to in-door cases treated.

52. In Agency and Salt Dispensaries there was a falling off in the number of in-door patients treated, the daily average sick, the number of deaths and the percentage of deaths to in-door cases treated, but a slight increase in the number of out-patients during the year under report.

53. In the hospitals and dispensaries supported by Native States, 15,432 in-door and 1,088,910 out-door patients were treated against 16,080 in-door and 1,097,392 out-door in 1901. The falling-off in the number of patients treated may be attributed to the better condition of the people and the healthiness of the year. The number of deaths and the percentage of deaths to in-door cases treated also fell from 873 and 5·43 in 1901 to 733 and 4·75 in 1902.

APPENDIX No. XX.

54. The diseases for which patients were treated in hospitals and dispensaries in Rajputana and the percentage to total cases treated under each chief cause, are shown as follows :—

Diseases.	Percentage during 1901.	Percentage during 1902.
(*a*) Malarial fevers and spleen	21·67	19·89
(*b*) Rheumatism	4·11	4·19
(*c*) Diseases of the eye	8·46	10·50
(*d*) Lungs and Respiratory diseases	7·57	7·17
(*e*) Diarrhœa and Dysentery	4·21	3·90
(*f*) Ulcers	9·30	9·95
(*g*) Skin diseases	9·00	9·15
(*h*) Injuries	2·13	2·31
(*i*) Syphilis	2·17	2·40

Leprosy.

55. Four hundred and one cases were treated for leprosy in Rajputana hospitals and dispensaries in 1902 against 476 in 1901.

Scurvy.

56. The number of cases of scurvy decreased from 1,843 to 1,523 in 1902.

Cholera.

57. There were only 2 cases of cholera treated from the General Hospital at Ajmer in Ajmer-Merwara District during the year under report against 4 in the previous year. From hospitals and dispensaries of Native States 1,076 cholera cases were treated against none in 1901.

Small-pox.

58. There were 37 cases of small-pox treated from hospitals and dispensaries in Rajputana in 1902, namely, 1 in Pisangan in Ajmer and 36 in Native States.

Snake-poisoning.

59. Calmette's anti-venine is kept in stock for use in the treatment of snake-bite.

Bubonic Plague.

60. Between the 3rd May and the 11th June 1902, 5 imported cases of plague were detected at railway inspecting stations in Rajputana, all of which proved fatal. From beginning of July to the 30th September no case of bubonic plague, either imported or indigenous, was detected. After the latter date occasional cases began to appear on the railway, and up to the end of March 1903 there were 13 cases of plague or suspected plague discovered by the Inspecting Officers at railway stations, 9 of which proved fatal. This makes a total of 18 imported cases and 14 deaths, *viz.*, 6 cases and 6 deaths at Abu Road, 1 case at Falna, 2 cases and 1 death at Ajmer, 1 case and 1 death at Phalera, 1 case and 1 death at Chitore, 6 cases and 5 deaths at Bandikui, and 1 case at Ahmedabad.

Only 2 deaths from indigenous cases occurred at Dutharya in Marwar in May 1902.

61. The following is a brief report of the recent epidemic which appeared in the following States of Rajputana, *viz.*, Marwar, Banswara, Alwar, Mewar, Jaipur, and Tonk States up to the 31st March 1903.

62. One thousand and seventy cases and 869 deaths were reported to have occurred from January to 31st March 1903 in the Native States of Rajputana as per detail below :—

	Cases.	Deaths.	Date of 1st case.
Marwar	1	1	20th November 1902.

Banswara.

63. Plague was imported into village Danipiplia in Banswara State from village Sarwan in Rutlam (where the disease was raging) on 17th December 1902. The village was evacuated willingly by the inhabitants under the personal supervision of the Assistant Resident, Mewar, and segregation camps established. It appeared in the city of Banswara on the 3rd February 1903 where 655 cases and 558 deaths were reported till the end of March 1903. Very great difficulty was at first experienced in getting the inhabitants of Banswara, a city of 7,038 persons, to do anything to prevent the spread of disease, but later the Residency Surgeon, Mewar, Major R. Shore, persuaded them to evacuate and afterwards all helped in precautionary measures, practically the whole city going into camp. The Durbar was especially obstructive.

Tonk.

64. At Nimbahera in Tonk State plague broke out on the 1st March 1903 where 168 cases and 124 deaths were reported till the end of March. The people of affected mohallas of the town were removed to the segregation camp outside the city. In Nimbahera, a large city belonging to the Mahomedan State of Tonk, trouble occurred at the early stages of the epidemic, but the personal efforts of Major Macwatt, Agency Surgeon, Haraoti and Tonk, resulted in successfully overcoming prejudices and in gaining the co-operation of the inhabitants to all precautionary measures.

Alwar.

65. In Alwar State plague was undoubtedly imported in the north from Rewari, in the west from Kotkasim, Gangapuri, etc., in villages, Jaipur probably originally infected from Rewari.

66. Plague broke out at first at Mandhan on the 17th February and immediately after the following villages were infected.

67. It will appear from the table given below that up to the end of March 199 cases occurred in these infected villages, of which 156 proved fatal, a death-rate for all attacked was 78·39 per cent. :—

	Cases.	Deaths.
Mandhan	49	45
Huria Khurd	22	22
Thana Ghazi	9	4
Hethal	1	1
Dawani	87	56
Beghana	1	1
Tijara	3	3
Bolni	27	24

68. Inoculation with Haffkine's serum was done in each village and, with the exception of Bolni and Thana Ghazi, most of the inhabitants of the surrounding villages submitted to the operation.

69. Four thousand eight hundred and six persons were inoculated as below :—

Public	4,141
State servants	665

70. This was done in Huria Khurd, and Dawani Bolni emptied itself, and at Mandhan, which had a population of 2,800 people it was thought sufficient to evacuate the infected mohallas. Each of the villages attacked were thoroughly cleared. From the village Mandhan nearly half the population fled at first, being afraid forcible repressive measures would be employed; later on, when reassured, they returned, but unfortunately brought infection with them causing a recrudescence of the disease.

Evacuation.

71. Later on the town of Thana Ghazi, of nearly 4,000 inhabitants on south-west of Alwar, was attacked by importation of the disease, 9 cases and 4 deaths occurring in February and March, and here amongst other places, the Residency Surgeon and Chief Medical Officer inspected and suggested self-protective precautionary measures.

72. It was early recognized that the spread of the disease depends far more on personal than on public insanitation and measures were at once taken to purify infected dwellings and all in their vicinity.

73. On the 31st March plague was still in existence in the States mentioned in paragraph 62 of the Report. The figures after that date will be given in the Report for 1903-1904.

APPENDIX No. XXI.

74. Sixty-two thousand and forty-three operations of all classes were performed in Ajmer-Merwara and in Native States during the year including 212 surgical patients remaining from the previous year, against 61,164 operations in the previous year. Of this number, 61,437 or 99·04 per cent. were recorded as "cured," 219 or ·35 per cent. "relieved," 111 or ·18 per cent. "discharged otherwise," and 75 or ·12 per cent. died, while 201 patients remained under treatment at the close of the year.

Operations.

75. Of the operations performed during 1902, 854 were for "extraction of the lens for cataract" against 953 in 1901, of which 732 or 85·71 per cent. gained good sight. As in the previous year there was no death from this operation or its consequences. Sixty-eight lithotomies, 90 litholapaxies, and 153 amputations were performed.

76. In Ajmer-Merwara 3,174 operations were done against 2,378 in 1901, with 9 deaths against 2 deaths in the previous year. Of these operations, 81 were extraction of the lens for cataract, 3 lithotomies, 10 litholapaxies, and 11 amputations, against 42 extraction of the lens, 4 lithotomies, 9 litholapaxies, and 10 amputations in 1901.

77. In Native States hospitals and dispensaries 58,859 operations were performed against 58,388 in 1901, with 66 against 64 deaths. Of these operations, 773 were extraction of the lens, 65 lithotomies, 80 litholapaxies, and 142 amputations against 911 extraction of the lens, 79 lithotomies, 110 litholapaxies, and 127 amputations in the previous year. One lithotrity was done in the Lady Dufferin Hospital at Alwar.

78. In accordance with the orders contained in letter No. 3131, dated 2nd June 1903, from the Secretary to the Director General, Indian Medical Service, Simla, the list of operations performed by individual officers and subordinates has been abolished.

APPENDIX No. XXII.

79. Of the total number of patients treated in hospitals and dispensaries in Ajmer-Merwara and Native States in 1902, 695 were Europeans, 1,770 Eurasians, 796,997 Hindus, 312,520 Musalmans, and 75,419 other classes, against 538, 1,850, 794,237, 318,845, and 77,437 in the previous year.

80. The population of Rajputana is largely composed of Hindus, so the attendance at the ordinary hospitals and dispensaries shows a high percentage of these castes.

81. 53·65 per cent. of those who attended were men; 21·58 women, and 24·77 children as compared with 54·06 men, 21·84 women, and 24·10 children in 1901.

APPENDIX No. XXIII.

82. The financial results of the working of the various dispensaries and hospitals during the year 1902 are shown in Appendix XXIII. The expenditure in the Ajmer Division amounted to Rs. 16,937 against Rs. 12,644 in the previous year. The increase was mainly due to the fact that a sum of Rs. 2,546-8-6 was devoted to the liquidation of the debit balance standing against the Ajmer General Hospital at the close of the year 1901. The figures for the various Political Agencies and Salt Department, taken as a whole, rose from Rs. 11,400 in the year 1901 to Rs. 13,261 in 1902, whilst the expenditure incurred by the Native States fell from Rs. 3,11,958 in 1901 to Rs. 3,06,819 in the year under report. The decrease occurred under the heads of Europe medicines, diet, and miscellaneous charges, and is ascribed to the healthiness of the year.

MISSION HOSPITALS.

83. During the year under report there were 5 Mission Hospitals in Rajputana as in the previous year, *viz.*, 2 at Ajmer (1 male and 1 female), 1 at Nasirabad, 1 at Udaipur, and 1 at Jodhpur.

84. In the Mission Hospital at Ajmer 16,816 new out-door patients were treated, the old cases treated numbered 64,568 and the in-door patients 221; there were 1,055 operations performed, of which 40 have been described as major operations under the old nomenclature of diseases. In the Women's Hospital at Ajmer 3,742 new out-door cases were treated, the old cases or re-attendance numbered 9,618, the in-patients 120, and the operations 321, of which 13 have been described as major operations. Besides, 1,365 visits were paid by the hospital staff to patients at their houses. In Nasirabad 11,261 new out-door cases were treated, the old cases or re-attendance numbered 33,845 and the in-door patients 426; there were 646 operations performed, of which 61 were major operations. In Udaipur 22,068 new out-door patients were treated, the old cases or re-attendance numbered 55,084, the in-patients 815, and the operations 1,951, of which 64 have been described as major operations. In Jodhpur 8,385 new out-door cases were treated, the re-attendance or old cases numbered 30,008, and the in-door patients 92; there were 924 operations performed, of which 49 have been described as major operations. Besides, 641 visits were paid by the hospital staff to people at their houses.

RAILWAY HOSPITALS.

85. There were six railway dispensaries on the Rajputana-Malwa Railway within the limits of Rajputana, *viz.*, one at Abu Road, one at Sojat Road, two at Ajmer, one of these being a large head-quarter hospital for Europeans and natives with male and female wards, one at Phalera and one at Bandikui.

86. Twenty-two thousand one hundred sixteen patients were treated in the above hospitals during the year under report, *viz.*, 3,834 at Abu Road, 2,048 at Sojat Road, 8,747 at Ajmer, 2,130 at Phalera, and 5,357 at Bandikui.

INSPECTIONS.

87. The Residency Surgeon and Chief Medical Officer in Rajputana inspected the hospitals and dispensaries during the past season in the following cities:—

Ajmer, Bikaner, Jaipur, Alwar, Bharatpur, Dholpur, Udaipur, Bundi, Kotah, Deoli, and Jodhpur, as well as all Imperial Corps hospitals in different States.

SALE OF QUININE.

88. As the question regarding the supply of quinine packets for sale to the Post Offices in Rajputana direct by the Superintendent of District Jail, Aligarh, has been finally decided, the unsold packets were returned to Residency and Agency Surgeons by Postmasters in each district. No further account under this head is given.

SECTION III.—JAILS.

89. *Ajmer.*—The daily average number of prisoners in the Ajmer Jail rose from 469·82 in 1901 to 540·56 in 1902 owing to overcrowding in the Jail; arrangements are in contemplation to obviate overcrowding in future.

90. In the Ajmer Jail the total number of cases treated in Hospital rose from 184 in 1901 to 269 in 1902, and the daily average sick from 7·58 to 12·38, but the mortality fell from 17 to 16 and the death-rate from 36·18 to 29·60 per mille.

91. The mortality of the Ajmer Central Jail compares unfavourably with that of some of the jails in Native States, *viz.*, Ajmer 29·60, Bikaner 5·92, Jodhpur 9·46, and Alwar 21·46.

92. It is hoped that the revised Jail Manual for the Ajmer Central Jail will be completed soon. It will be useful as a guide to the Jail Superintendents in Native States.

93. The new well for the Ajmer Jail has been completed, but as the pipe connection with the Jail has been delayed, it is at present of little practical value. Water has consequently had to be purchased from the Municipality and can only be had in comparatively small quantity. Water for bathing purposes has been very scarce and for agricultural uses *nil*. It is understood that the connecting pipes between the well and the Jail will be completed during 1903.

94. Various minor structural improvements proposed by the Jail Superintendent and Inspector General of Jails, United Provinces of Agra and Oudh, and sanctioned by the Local Government, were undertaken during the year. The majority will be completed shortly. It is under consideration to add three new barracks on the eastern side of the jail to accommodate from 90 to 120 prisoners.

95. The review by the Commissioner, Ajmer-Merwara, on the strength, disposal, classification, health, employment, and conduct of prisoners, nature of sentences, jail manufactures and expenditure of the Ajmer Jail forms Appendix A of the Report together with statements.

96. In the Ajmer Jail malarial fevers and spleen diseases gave rise to 26 per cent. of the total cases treated against 25 per cent. in the previous year, an increase of one per cent. in 1902. Lung and respiratory diseases contributed 5 per cent. of the sickness against 14 per cent. in 1901, a considerable decrease of 9 per cent. There were fewer cases of dysentery and diarrhœa by 2 per cent. and of ulcers by 3 per cent. than in the previous year. Skin diseases rose from 4 to 6 per cent. in 1902. The mortality from lung and respiratory diseases and from dysentery and diarrhœa were lower by 4 and 12 per cent. than in 1901. There was no cholera in the Jail.

Causes of admissions and deaths in Ajmer Jail.

97. Of the 16 deaths which occurred in this Jail, 15 were convicts and 1 under-trial prisoner. Four of the convicts died of acute inflammation of the brain, 3 of pneumonia, 2 of bronchitis, 1 of congestion of brain, and the remaining 5 convicts of various other diseases, *viz.*, dysentery, epilepsy, heart disease, obstruction of bowels, and syphilis.

98. One under-trial prisoner died of "acute inflammation of brain."

99. *Native States.*—Returns have been received from 20 Jails in Native States of Rajputana as in the previous year.

100. The daily average number of prisoners in these Jails rose from 5,618·72 in 1901 to 5,966·44 in 1902, and the total number of persons treated rose from 3,987 in 1901 to 4,314 in the previous year. The daily average sick fell from 148·92 in 1901 to 147·48 in 1902, the mortality from 233 to 210, and the death-rate from 41·47 to 35·20 per mille in 1902.

101. In the Jails of Native States malarial fevers and spleen diseases contributed 36 per cent. of the sickness against 33 per cent. in the previous year, and 9 against 12 per cent. of the mortality, and lung and respiratory diseases 12 per cent. of the total cases treated against 10 in 1901 and 31 against 27 per cent. of the total deaths. Dysentery and diarrhœa gave rise to 16 per cent. of the sickness against 14 per cent. in the previous year and 29 against 31 per cent. of the mortality.

102. There was no cholera in the Jails of Rajputana in 1902.

103. *Bikaner.*—The Bikaner Jail is a model of what a Native State Jail should be; thorough discipline is maintained and the large majority of prisoners are engaged on remunerative in-door labour, and there is a very low percentage of sickness and mortality.

104. *Jodhpur.*—There is a considerable improvement in the Jodhpur Jail and the prisoners are well looked after. Anti-malarial pills were given to all the prisoners for 2½ months of the most unhealthy season of the year. A separate barrack for under-trial prisoners is still required.

105. *Jaipur.*—There has still been overcrowding in the Central Jail, Jaipur, throughout the year; the death-rate rose from 23·03 to 40·97 per mille of average strength during the year under report. In the District Jail the death-rate fell from 12·27 to 10·47 per mille. Accommodation for 200 prisoners is required in the Central Jail and workshops for carpet and durree weaving in the District Jail in which a new barrack for 52 prisoners was constructed. The barrack originally built for females in the District Jail is now utilized for male prisoners as there is ample accommodation for female prisoners in the Central Jail.

106. *Kishengarh.*—The Kishengarh Jail is in good order and the prisoners are in good health. No death occurred during the year under report. The under-trial prisoners are accommodated in the old Jail in the city where better arrangements have now been made for sanitation than obtained a year ago. As much space is allowed for each convict as is prescribed by the rules.

107. *Alwar.*—The Jail at Alwar is in excellent order as hitherto, but the death-rate in the Jail rose from 5·20 to 21·46 per mille of average strength. This high mortality is attributed to low condition of the prisoners on admission and old age.

108. *Bharatpur.*—The Jail at Bharatpur is in good order, but the daily average sick rose from 4·89 to 7·92, and the death-rate from 7·67 to 35·77 per mille of average strength in 1902. The Residency Surgeon and Chief Medical Officer remarks that a large number of prisoners had enlarged spleen showing a strong malarial taint.

109. *Dholpur.*—There has been some improvement in the health of the prisoners in this Jail during the year under report; however, much cannot be expected till the new Jail on hygienic and model lines is completed and occupied by prisoners.

110. *Kotah.*—This Jail is in good order and clean, the prisoners are well looked after and the mortality and daily average have fallen considerably, the former from 109·75 to 41·16 per mille of average strength and the latter from 17·59 to 9·80 in 1902. There were 18 deaths in 1902 against 52 in the previous year.

111. *Udaipur.*—The Jail at Udaipur is in good order but still overcrowded. The health of the prisoners has been on the whole good as compared with the previous year. Cerebro-spinal fever appeared among the prisoners and accounted for 5 deaths. Twenty-six deaths occurred during the year against 49 in 1901. The women have now excellent quarters.

112. *Partabgarh.*—The mortality in this Jail fell from 90·21 to 40·06 per mille, but the sick rate has continued very high. It is proposed that a new Jail on modern principles be built when funds are available.

113. *Banswara.*—This Jail has been much overcrowded throughout the year; the death-rate rose from 129·35 to 272·28 in 1902. It is proposed to construct a new Jail on a healthy site.

114. *Dungarpur.*—There is still very considerable overcrowding in the Jail which might be relieved by the temporary removal of excess of prisoners to some other building. It is proposed to erect a new Jail for which a site has been selected. The mortality in this Jail rose from 128·76 to 217·47 per mille of average strength.

Inspection of Jails.

115. The Residency Surgeon and Chief Medical Officer in Rājputana inspected the Jails at Bikaner, Jaipur, Ajmer, Alwar, Bharatpur, Dholpur, Udaipur, Bundi, and Kotah; the Residency Surgeon, Western Rajputana States, inspected the Sirohi Jail; the Residency Surgeon, Jaipur, the Kishangarh

Jail; and the Residency Surgeon, Mewar, the Banswara and Partabgarh Jails.

116. Steady progress is being made in jail management in most of the States of Rajputana and the prisoners are now generally well cared for. The water-supply, the food and the vegetable gardens of jails are all receiving more attention than hitherto. There is still overcrowding of prisoners in some States and a few of the old jails are very defective.

Commissioned Medical Officers.

117. *Qualified Medical Staff.*—There were 10 Commissioned Medical Officers employed in Rajputana at the end of the year under report besides the Military Medical Officers as below:—

2 Agency Surgeons, 1st class	1 Residency Surgeon and Chief Medical Officer, Rajputana; 1 Residency Surgeon, Western Rajputana States, Jodhpur.
8 Agency Surgeons, 2nd class	2 Residency Surgeons at Jaipur and Udaipur. 4 Agency Surgeons at Alwar, Bharatpur, Deoli, and Kotah. 2 Civil Surgeons at Ajmer and Bikaner.

118. Twenty-one Hospital Assistants were permanently employed by the British Government, *viz.*, 8 in Ajmer-Merwara, 9 in Political Agencies and Salt Dispensaries, 1 at Abu Road Dispensary, and a reserve of 3 to act for the above from time to time.

119. There were 137 qualified Government Hospital Assistants transferred for employment by Durbars and a reserve of 14 more to act temporarily for them or for special duty. There were 11 locally entertained Hospital Assistants employed, *viz.*, 5 in Bharatpur, 5 in Jaipur, and 1 in Mewar. Besides these there are 4 local class native doctors who are locally entertained by the different States in Rajputana, *viz.*, 1 in Marwar, 1 in Bundi, 1 in Kushalgarh, and 1 in Mewar. It is hoped that these local class native doctors will gradually be replaced by qualified men from the Hospital Assistants' list.

120. There were 9 Military Hospital Assistants during the year under report, 8 of them were employed with the Imperial Service Troops of Rajputana, and 1 was on special duty with the *ex*-Maharajah of Bharatpur.

121. Four Lady Doctors were employed in Native States of Rajputana as in the previous year, and 11 Female Hospital Assistants against 8 in 1901. The former were in medical charge of hospitals for women at Jodhpur, Alwar, Udaipur, and Tonk, and the latter were employed in Jodhpur (1), Alwar (2), Bharatpur (1), Jaipur (1), Karauli (1), Bikaner (2), Tonk (1), Kotah (1), and Jhalrapatan (1). The work done was satisfactory and encouraging. In Hospitals and wings of Hospitals for women there were 1,754 in-patients and 54,434 out-patients treated, and 73 major and 2,440 minor operations performed.

122. Although it is to be regretted that so little midwifery work is done in these Hospitals, still the staff have been enabled to attend many women in their own homes and are thus preparing the way for further progress in this direction.

123. Her Excellency Lady Curzon's scheme for the instruction of Dhais is shortly to be given a fair trial in several of the Native States and at Ajmer. It will be interesting to watch the results, as, if the matter is taken up by the people, it will be the means of saving much suffering and many lives.

Imperial Service Troops.

124. The three Regiments of Cavalry, the Camel Corps, the two Transport Corps, and the two Regiments of Imperial Service Infantry at Alwar, Jodhpur, Bikaner, Jaipur, and Bharatpur have well equipped hospitals, which have been regularly inspected by the Residency Surgeon and Chief Medical Officer in Rajputana.

Insanes.

125. During the year under report, 10 lunatics were treated in the Ajmer Central Jail, of whom 2 were cured, 5 made over to their relatives and friends, and 3 remained under treatment.

126. In Native States 148 lunatics were treated in 1902, of whom 51 were cured, 13 made over to the custody of their friends and relatives, 13 died, and 71 remained under treatment.

127. Lunatics from Kishangarh are sent to the Jaipur Lunatic Asylum and paid for by the Kishangarh Durbar. None were, however, admitted from there during the year under report.

128. There are no Lunatic Asylums at Sirohi, Kishangarh, Dholpur, Tonk, Bundi, Shahpura, Partabgarh, Banswara, and Dungarpur. Some arrangements for the care and treatment of insanes by these Durbars might be instituted.

129. As little attempt is made in most of these asylums to cure the patients who are merely detained, fed and medically treated when suffering from ordinary disease, Lieutenant-Colonel D. ffrench Mullen, I.M.S., Residency Surgeon and Chief Medical Officer in Rajputana, suggested that a central asylum might be started at Ajmer supported by the Native States in which lunatics would be scientifically treated and cared for and all local asylums abolished. Such an institution might be beneficial, provided sufficient funds for erection and upkeep could be provided.

FAMINE.

130. In December 1901 test relief works were opened in Merwara District, but no extra medical arrangements were made until March 1902. Up till then the camps and works were visited periodically by the Assistant Surgeon, Beawar, and the Hospital Assistant, Todgarh, in the Beawar and Todgarh sub-divisions, respectively.

131. The following Famine Camp Hospitals were opened and closed on the dates specified against their names:—

Name.	Date of opening.	Date of closing.
(1) Asan Tank . .	23rd March 1902.	18th August 1902.
(2) Kukerkhera . .	26th March 1902.	2nd August 1902.
(3) Kukra Road . .	4th April 1902.	2nd August 1902.
(4) Togi Road . .	3rd August 1902.	30th September 1902.
(5) Baggar Road . .	13th August 1902.	15th September 1902.
(6) Mukrera Tank . .	1st April 1902.	31st July 1902.
(7) Masuda Road . .	12th September 1902.	5th October 1902.

132. The total number of patients treated in these temporary hospitals was 4,113, of which 1,408 were in-patients and 2,705 out-patients; 16 deaths occurred.

133. One thousand one hundred and sixty patients were treated in Asan Hospital, 1,088 in Kukerkhera, 652 in Mukrera, 587 in Kukra, 257 in Togi, 277 in Baggar, and 92 in Masuda Road.

134. The general health of the labourers was good and the facies with famine was seldom seen.

135. The sanitation of the works and camps was generally fair. The water-supply on the whole was sufficient and potable. The wells were regularly treated with permanganate of potassium.

136. The supply of food-stuffs was sufficient and of good quality.

137. Appendix No. XXVII shows the dates on which the several reports on dispensaries and vaccination were received from the Residency and Agency Surgeons.

V. HARINGTON, *Lt.-Col., I.M.S.*,
Residency Surgeon and Chief Medical Officer,
Rajputana.

MOUNT ABU;
13th June 1903.

APPENDIX A.

AJMER JAIL.—1902.

The following officers held charge of the office of the Superintendent of the Ajmer Central Jail during the year 1902 :—

Lieutenant-Colonel H. N. V. Harington, I.M.S., Civil Surgeon, Ajmer, from 1st January to 5th March, 1902.

Munshi Harnam Dass, Extra Assistant Commissioner, II, from 6th to 12th March, 1902.

Captain F. A. Smith, I.M.S., Officiating Civil Surgeon, Ajmer, from 13th March to 30th April, 1902.

Major R. C. Macwatt, I.M.S., Civil Surgeon, Ajmer, from 1st May to 9th November, 1902.

Major H. R. Woolbert, I.M.S., Civil Surgeon, Ajmer, from 10th November to the end of the year.

Population.

2. The year opened with a Jail population of 476 and ended with one of 482. The total number of admissions was 1,978, as compared with 1,583 in 1901. The daily average strength rose from 469·82 in 1901 to 540·56.

Disposal of convicts.

3. In the course of the year 27 convicts were released on appeal, 813 on expiry of sentence, 21 on payment of fine and 102 under the Remission Rules, while six convicts were transferred to other Jails. One was executed, 15 died, and 464 remained in the Jail at the close of the year.

Disposal of under-trial prisoners.

4. Of 1,000 under-trial prisoners, 334 were released, 624 were convicted and sentenced, 25 were transferred and one died, 16 remaining in the Jail at the close of the year.

Disposal of civil prisoners.

5. Of 5 civil prisoners 3 were released and 2 remained under detention when the year closed.

Classification of convicts.

6. Of 1,025 convicts admitted in the year, 4 were Christians, 206 Muhammadans, and 815 Hindus.

By age classification.

According to ages 53 were under 16 years, 852 between 16 and 40, and 120 between 40 and 60 years.

By profession classification.

Of 923 male prisoners, 419 were agriculturists, 317 labourers, 46 shop-keepers and traders, 46 domestic servants, 31 Government servants and 64 were without occupation. Of the 102 female convicts, 60 were married, eight unmarried, 33 were widows and one was a prostitute.

Nature of sentence.

7. Of the 1,025 convicts admitted in the year, 65 were sentenced to simple and 864 to rigorous imprisonment. In the case of 52 convicts, solitary confinement was awarded in addition to rigorous imprisonment, while 44 were sentenced to rigorous imprisonment with whipping.

The number of convicts sentenced to terms of imprisonment not exceeding one month was 368; 262 were sentenced to imprisonment exceeding one month but not exceeding three months; 214 to terms of imprisonment above three months but not exceeding six months; 92 to imprisonment above six months but not exceeding one year; 59 to imprisonment above one year but not exceeding two years; 11 to imprisonment exceeding two years but not exceeding five years; 15 to imprisonment above five years but not exceeding ten years; and one to imprisonment exceeding 10 years. Two convicts received sentences of transportation of life and one was capitally punished.

Previous convictions.

8. The total number of previously convicted persons admitted during the year was 179 against 144 in 1901. The ratio per cent. of the number having previous convictions to the total admission was 17·57 as compared with 18·53 in the last year.

Employment of convicts.

9. The daily average number of convicts sentenced to labour on working days was 441·75. Of this average number 285·43 were employed on Jail manufactures, 124·19 were engaged on prison duty, 13·55 were employed as prison officers, 6·55 were not employed as they were convalescent and infirm and 12·03 were sick.

Conduct of prisoners.

10. The general conduct of the prisoners was good. The number of Jail offences rose from 140 in 1901 to 226. The offences related to breaches of Jail discipline. In the opinion of the Superintendent the increase has been due to the more careful reporting of minor offences. The prisoner who escaped from custody in 1899 is still at large. There were no escapes during the year.

11. The health of the prisoners was fairly good in spite of the overcrowding of the Jail.

Health of prisoners.

The number of admissions into the Jail Hospital was 266 as compared with 173 in 1901. The number of deaths was 16 against 17 in 1901. The Jail was free from any infectious disease.

12. The number of juvenile offenders confined in the Jail rose from 32 in 1901 to 57.

Juvenile offenders.

Of these 52 juvenile convicts were released and only five remained in the Jail at the close of the year. The conduct of the boys was not so good as in 1901; proposals are under consideration for the confinement of Ajmer juvenile convicts in the Reformatory of the United Provinces Government at Chunar.

13. The cash profit from the Jail manufactures amounted to R3,881 against R3,670 in 1901. The cash earnings per head of the Jail population fell from R9-8-1 in 1901 to R8-12-7.

Jail manufactures.

14. The expenditure incurred in guarding and maintaining prisoners in 1902 amounted to R32,196 as compared with R29,668 in 1901. This includes the expenditure incurred by Magistrates (R2,447) on guarding and maintaining under-trial prisoners. The average cost per prisoner fell from R63-2-4 in 1901 to R59-9-11.

Expenditure.

15. The net cost (including the cost of under-trial prisoners maintained by Magistrates) of the Jail to Government was R28,315 as compared with R23,960 in the preceding year.

Net cost to Government.

The cost of the maintenance of Native State prisoners had not, however, been yet recovered for 1902.

16. Various minor structural alterations in the Jail were undertaken in the year on the recommendation of the Inspector General of Prisons in the United Provinces. The majority will be completed in the official year 1902-1903. The preparation of a Jail Manual for local use is in hand.

General remarks.

A. TUCKER,
Commissioner, Ajmer-Merwara.

LIBRARY OF THE BOMBAY BRANCH OF THE ROYAL ASIATIC SOCIETY.

Sketch Map

TO ILLUSTRATE THE

DISTRIBUTION OF AND COMPARATIVE MORTALITY FROM CHOLERA IN THE RAJPUTANA AGENCY during the year 1902.

Scale 1 Inch = 40 Miles.

Names of States and Districts.	Population.	Deaths from Cholera.	Death rate per 10,000 of Population.	Date of first case of Cholera.	Date of last case of Cholera.

* Whether a Central Prison, District Jail or Subsidiary Jail.

NOTE.—When Civil Prisoners are in a separate place of confinement and under some authority other than that of the Jail Department, such, for example, as the Nazir of the Civil Court, they should not be included in these statements.

No. 1.—*Statement showing the number and disposal of convicts in the Central Jail at Ajmer for the year 1902.*

1	2	3	4	5	6	7		8	9		10						11	12	13	14	15	16	Remarks.
						Received from other Jails.			Transferred to other Jails.		Released during the year.												
														D									
														By order of Government.									
Sex.	Total aggregate number of prisoners during the year.	Daily average number of prisoners.	Remained on the last day of the year.	Imprisoned during the year.	Total.	A	B	Total population.	A	B	A	B	C	E	F	G	Transported beyond sea.	Transferred to Lunatic Asylum.	Escaped.	Executed.	Died.	Remaining on the last day of the year.	
						To undergo sentence.	In transit, for transportation, *en route* to other Jails, etc.		To undergo sentence.	For transportation beyond seas, etc.	On appeal.	On expiry of sentence.	On payment of fine.	On account of sickness.	On account of epidemics.	For good conduct.							
Male	180,115	493·47	412	917*	1,329	6	...	1,335	2	2	25	720	18	...	...	98	...	...	...	1	15	454	
Female	6,830	18·71	12	102†	114	...	...	114	1	1	2	93	3	...	...	4	...	...	...	...	...	10	
TOTAL .	186,945	512·18	424	1,019	1,443	6	...	1,449	3	3	27	813	21	...	...	102	...	...	...	1	15	464	

* Of this number 44 Boys under 16 years. † Of this number 9 Girls under 15 years.

NOTE. 1.—This and the other statements numbered 1 to 7 only convicted prisoners are to be included.

2.—Debtors and others detained for default of Government revenue will appear in No. 8.

3.—The "Total," column 6, is obtained by adding together the totals of columns 4 and 5, and represents with sufficient accuracy the number of different individuals who have been in prison during the year.

4.—The "Total population," column 8, is the sum of columns 6 *plus* 7, and necessarily includes many who are counted more than once.

5.—The "Daily average number," column 3, is obtained by adding together the number presented on each day of the year, *vide* column 2, and dividing the whole by the number of days in the year.

6.—When prisoners are transferred from one Jail to another on their way to undergo transportation beyond seas, they should be entered by the transferring Jail in column 6 B; and by the Jail which received them they should be entered in column 7 B. When prisoners sentenced to transportation beyond seas are despatched from any Jail, so that they will leave the Province without passing through any other Jail in it, they should be entered in column 11.

It will be observed that transportation applies only to those prisoners sent *beyond seas*.—Transportation to a Central Prison is regarded merely as a transfer.

7.—When the gangs are employed extramurally under the orders of Government No. 1632-43, dated 28th October 1869, they should be considered as forming a separate Jail, and the name of the Jail, that is, of the place where they are employed, should be entered in italics in each statement.

AJMER JAIL OFFICE;
The 16th February 1903.

H. R. WOOLBERT, *M.B., Major, I.M.S.,*
Superintendent, Central Jail, Ajmer.

No. 2.—*Statement showing the religion, age, and previous occupation of the convicts in Jail at Ajmer for the year 1902.*

1	2							3				4													5		
	Religion.							Age.				Previous Occupation.													Total.		
												Male.									Female.						
	A			B	C	D	E	A	B	C	D	A	B	C	D	E	F	G	H	I	J	K	L	M			
	Christians.																										
Sex.	a	b	c																								
	European.	Eurasian.	Native.	Mahomedans.	Hindus.	Buddhists and Jains.	All other classes.	Under 16 years.	16 to 40 years.	40 to 60 years.	Above 60 years.	Of independent property.	Agriculturists.	Labourers.	Shopkeepers and Traders.	Artizans.	Domestic servants.	Miscellaneous occupation.	Government servants.	No occupation.	Married.	Unmarried.	Widowed.	Prostitutes.	Male.	Female.	Total.
Male	...	2	1	195	725	...	...	44	768	111	...	...	419	317	46	...	46	...	31	64	60	8	33	1	923	102	1,025

Total	...	2	2	206	815	...	...	53	852	120	...	...	419	317	46	...	46	...	31	64	60	8	33	1	923	102	1,025

Note.—It is of importance that the particulars given in this, and also in No. 3, should not include the same individual more than once, and hence all transfers should be omitted.
The Totals should correspond with the number in column 5, Statement I: "Imprisoned during the month." But they should do so with the "Total" column 6, for January only, as the number remaining on the last day of the previous year (31st December) is to be included in that month.

Statement No. III.—*Statement showing the convicts admitted into the Jail at Ajmer during the year 1902 and those remaining on the 31st December of that year according to the nature and length of sentence.*

The female column should be filled in in *italics.*

(A) Prisoners admitted during the year should only be shown here, *vide* column 5 of monthly statement No. 1, from January to December.
* Classes A, B, C, and D should be amalgamated for this total. Prisoners who escaped and were recaptured during the year 1902 should not be shown in this and Annual Statement No. IV.
(a) This figure should tally with those shown in column 16 of Monthly Return No. I for December.

Ajmer Jail Office;
The 16th February 1903

H. R. WOOLBERT, *M.B., Major, I.M.S.,*
Superintendent, Central Jail, Ajmer.

STATEMENT No. IV.—*Statement showing the convicts admitted into the Ajmer Jail during the year 1902 who had been previously convicted.*

Sex.	1	2				3	4		5
		Number previously convicted.					Juvenile prisoners under 16 years of age (Section 399 of the Criminal Procedure Code).		
	Number admitted during the year.	A	B	C	D	Ratio of column 2 D to column 1.	A	B	Remarks.
		Once.	Twice.	More than twice.	Total.		Number admitted during the year.	Number previously convicted.	
Male	917	98	37	43	178	19·41	44	2	
Female	102	...	...	1	1	·98	9	...	
Total	1,019(*a*)	98	37	44	179	17·57	53(*b*)	2	

(*a*) NOTE.—In column 1 will be entered the prisoners admitted during the year, *vide* column 5 of Monthly Statement No. 1, from January to December 1902. Numbers in column 2 will be inclusive of the number in column 4.
(*b*) The figures in column 4 A should tally with those shown in column 3 A of Monthly Return No. II for the year.

STATEMENT No. V.—*Statement showing the escapes and recaptures of convicts in the Central Jail at Ajmer for the year 1902.*

1	2			3	4			5			6			
	Escaped during the year.				Recaptured during the year.			Remaining uncaptured.			Unexpired portion of sentence of those who escaped during the year.			
Remaining uncaptured on the last day of the past year.	A	B	C	Grand Total.	A	B	C	A	B	C	A	B	C	D
	From inside the Jail.	From outside the Jail.	Total.		Those who escaped in previous years.	Those who escaped during the present year.	Total.	Of previous years.	Of present year.	Total.	Under 1 year.	Above 1 and under 3 years.	Above 3 and under 7 years.	Above 7 years.
1	...	...	...	1	...	...	...	1	...	1	...	...	...	...

In column 1, and also in column 5 A, only those should be included who have escaped during the previous seven years. In 4 A, if any are entered who have been at large for upwards of seven years, a special note should be added. A footnote should show how many have been struck off, each having escaped more than seven years previously.

STATEMENT No. VI.—*Showing the offences committed by the convicts, and the punishments inflicted on them in the Jail of Ajmer, during the year 1902.*

1	2	3	4			5							6	7
			Breaches of Jail Rules.			Punishment inflicted.								
						A	B—By Jail Officers.					C		
Sex.	Average number of Convicts.	Criminal Offences. *	Smoking or having possession of forbidden articles.	Offences relating to work.	Other offences against prison discipline.	By Criminal Court.	A Solitary confinement.	B Solitary confinement, with reduced diet.	C Reduced diet.	D Corporal punishment.	E Other punishment.	Total punishment.	Ratio of column 5 C to column 2.	Remarks.
Male	493·47	...	33	99	94	...	27	...	7	5	187	226	45·80	
Female	18·71	...	...	...	...	...	...	...	...	...	...	...	...	
Total	512·18	...	33	99	94	...	27	...	7	5	187	226	44·13	

The nature of the Criminal offences committed should be noted on the back of this return.
* In contradistinction to offences against prison discipline.

H. R. WOOLBERT, *M.B., Major, I.M.S.,*
Superintendent, Central Jail, Ajmer.

AJMER JAIL OFFICE;
The 16th February 1903.

STATEMENT No. VIII.—*Statement showing the employment of convicts as Prison Officers in the Central Jail at Ajmer for the year 1902.*

1	2	3	4	5	6	7
SEX.	Average number of convicts.	Average number employed as Prison officers.	Ratio of column 3 to column 2.	Total number employed as Prison officers.	Number of reductions or other punishments.	REMARKS.
Male	493·47	13·55	2·75	19	...	Convict Warders . . No. 3 Ditto Overseers . 11 Ditto Writers . . 2 Ditto Mohurrirs . 3
Female . . .	18·71	...	...	...	...	
TOTAL .	512·18	13·55(*c*)	2·65	19(*a*)	...(*b*)	TOTAL . 19

(*a*) The nature of the offices held by convicts should be given in column of remarks.
(*b*) Detail of the nature of punishments ordered should be given as directed in paragraph 19 of the Government Review on the Jail Reports for 1884.
(*c*) Column 3 should tally with column 7 B of Return No. XII. Column 5 should show the total number of convicts employed as Warders, etc., and not merely the total sanctioned number of situations.

STATEMENT No. IX.—*Statement showing the Scales of Diet in force in the Ajmer Central Jail during the year 1902.*

1	2	3	4
Diet scales of labouring prisoners.	Diet scale of non-labouring prisoners.	Punishment diet scale.	Note of any change effected in diet scales during the year.
Atta of Gram 1/3 } 12 Chittaks daily. „ Barley 2/3 } Dal alternately . 2 Chittaks. Vegetables alternately 8 „ Oil with vegetables 4/25* „ Salt „ „ 1/4 „ „ „ Dal 1/6 „ Chillies with vegetables 2 M. „ „ Dal . 1 „ Fuel . . . 4 Chittaks.	Atta 8 chittaks on Sunday and Monday and 10 chittaks on other days. Other articles are same as for labouring prisoners.	Labouring prisoners 8 chittaks atta, with the usual quantity of salt; the period of this diet is ninety-six consecutive hours.	From the 24th July 1902, prisoners on the mills are given 14 chittaks of atta instead of 12 chittaks, as before that date. (*Vide* para. 7 of Chief Commissioner's letter No. 745—248 II., dated the 20th July 1899.)

NOTE.—A complete statement of all the diet scales in use for labouring prisoners according to length of sentence should be given in column 1, with details as to the articles used, and the variations in different days of the week.
* Or (4) chittaks for 25 prisoners.

H. R. WOOLBERT, *M.B., Major, I.M.S.,*
Superintendent, Central Jail, Ajmer.

AJMER JAIL OFFICE;
The 16th February 1903.

STATEMENT No. X (*Financial*).—*Showing the expenditure in guarding and maintaining the prisoners in the Central Jail at Ajmer during the year 1902, excluding the cost of building new Jails, of Additions, Alterations, or Repairs.*

1	2	3				4		5		6		7			8		9		10	11	12	13
		Average number of Prisoners.				Rations.		Establishment.		Merwara Battalion.		Hospital charges.			Clothing.		Contingencies.					
Serial Number.	Name of Jail.	Convicts.	Under-trial.	Civil.	Total.	Total cost.	Cost per head of average strength excluding civil prisoners.	Total cost.	Cost per head of average strength.	Total cost.	Cost per head of average strength.	Total cost.	Cost per head of average strength.	Cost per head of average number of sick.	Total cost.	Cost per head of average strength.	Total cost. 		₹	₹	₹	₹	₹	₹ a. p.	₹	₹ a. p.	₹	₹ a. p.	₹	₹ a. p.	₹ a. p.	₹	₹ a. p.	₹	₹ a. p.	₹	₹ a. p.		
1	Central Jail, Ajmer	512·18	27·52	·86	540·56	12,530	23 3 6	9,089	16 13 0	...	...	699	1 4 8	56 7 8	1,330	2 7 5	1,737	3 3 5	25,385	46 15 4	1	
	Add for District Lockups	...	...	...	...	...	...	...	...	...	...	...	...	...	...	...	...	...	2,334	...		
	GRAND TOTAL	...	...	...	...	...	...	...	...	...	...	...	...	...	...	...	..	...	27,719	...		

When prisoners of different classes are confined in the same Jail, the expenditure on establishment and other items with which all are concerned should be divided over all. The cost per head under any item of expenditure is to be calculated on prisoners actually concerned in it or contributing to it, and not otherwise. Hospital charges (column 7) should include rations and also the cost of medicines supplied from the Bazar and the Medical Store Depôt. In this series (Financial) annas and pies are only to be shown where there are columns for them.

STATEMENT No. XII.—*Showing the employment of convicts in the Jail at Ajmer during the year 1902.*

1	2	3	4	5	6	7													8	9		
						AVERAGE NUMBER EMPLOYED ON WORKING DAYS.													Average number of convicts hired out to Municipalities, private individuals, or Departments other than the Public Works Department.	Ratio per cent. of column 3 on those employed on working days as:—		
								On Prison Duties.				On Jail Buildings.										
												Additions and alterations.		New Jail.								
						A.	B	C	D	E	F	G	H	I	J	K	L					
Sex.	Average number not sentenced to labour.	Average number under sentence of labour on working days.*	Average number sick.	Average number convalescent and infirm.	Average number not employed for other reasons.	On unremunerative labour.†	Prison officers.	Prison servants.	Gardening.	Employed in preparing articles for use or consumption in Jails, *e.g.*, wheat grinding, manufacturing of Prison clothing, etc.	Jail Repairs.	Under Superintendent.	Under Public Works Department.	Under Superintendent.	Under Public Works Department.	Manufactures.	a	b				
																	Public Works.	Other extra-mural labour.		Prison officers.	Prison servants.	On manufactures (7 K).
Male	3·78	428·02	11·58	6·27	...	...	13·55	49·47	1·27	67·72	4·73	...	...	...	...	273·43	...	...	...	3·17	11·56	63·88
